Oh, yes, def. Bounty Bob. Miner I've seen around for $3 and up. Got mine boxed for about $7. My Bounty Bob, boxed, I got for $50, but that was a package deal containing an 800XL, 1050 and some 10 other carts.

1750. Re: Atari 8 bits and the Internet?

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-12 10:18:41 UTC
From: Sid Pacman <erasmus@6502.chips.ahoy>
Message-ID: <Pine.GSO.3.96.1010312040226.11741B-100000@shell1>
Source record: 38020

On Sun, 11 Mar 2001 at 23:00:32 GMT, Daniel Miller (dcm01 att usa dott
net) scribbled:
->I understand many ISP's actually have the shell capability, even if
->they themselves don't know it?

In my view there are two separate issues here: (1) dialing up an ISP
with a non-Windoze platform like the Atari 8-bit, and after getting
logged in, operating in Unix shell mode; and (2) browsing the Internet.

A non-Windoze user must successfully pass the first stage in this
process in order to be able to tackle the second stage. My ISP is
still offering Unix shell service, but in recent years some posters on
this newsgroup have been saying that some ISPs don't do this anymore.
(Incidentally, I'm in Unix shell mode and am using the Unix program
"Pine" to post this message -- not because I'm using an Atari 8-bit but
because I'm not a Windozer.)

After getting into Unix shell mode, the Internet can be reached with
a Unix text-browser program like Lynx. The Lynx program is still being
supported and works fairly well. The latest version is 2.8.3rel.1, and
information about it can be obtained at: http://lynx.browser.org/

-> In other words the idea is just to call up the data line with a
->terminal program, and see if something turns up.

This doesn't sound like a good prescription. The original poster
apparently plunked his money down and then tried to do just this. At
that point he found out the bad news.

One question is whether that poster can "get" Unix shell service (or
talk the ISP into making it available) even tho they don't ordinarily
"offer" it.

If the ISP offers dialup service, what happens if the user dials in
and then types "shell" (and hits #ENTER# or #RETURN#) when a connection
is made?

If the ISP doesn't "offer" shell service, one wonders what O.S.
their own people use while on the job? The sysads at my ISP still talk
about Unix-based or Unix-related O.S.es and they still answer
occasional questions about Unix that are posted on the ISP's own 'help'
newsgroup. Apparently some of them use Unix programs at least some of
the time.

If an ISP uses Sunux or Linux or other Unix-type systems for their
own use, why shouldn't a subscriber be able to tap into Unix shell
mode?! The original poster should look around and press a little

harder to try to get shell access.

Once the user gets into shell mode, there are lots of Unix programs that can be run -- and they're run on the ISP's computer, so the user gets the benefit of the size and speed of the ISP's system. Of course, the Unix user also needs to learn something about Unix in order to be able to use it. When I first got into Unix I got a couple of books on it; perhaps the simplest and best (believe it or not) is "Unix For Dummies." I recommend it for anybody looking for basic info on Unix.

There were some changes in the operating system between the classic 400/800
and the XL/XE series. A small number of games just dont work across all 3
main versions. Most do however. Look at the FAQ for a reliable list of games
of which there are known problems with.

Don't know why everyone else doesn't get it, just know what happened at the one I use. More 2nd hand rumor: Initially I could login to my shell account, load up a word processor and write some C programs, compile and excecute them on the host system.

What happened was a former employee or partner got/left/??? with a copy of the password list and was doing the same maliciously. Auto bots and whatnot.

Since then my ISP has seriously curtailed just exactly what I can do. I no longer even have excecute privilages for programs in my user space or gcc. Been paying an extra $5-$6/month for shell access I haven't used in 5 years. Funny thing is I am still more comfortable using the shell for file manipulation so I keep it active just in case.

It is probably a good idea, more secure and all that.

1755. Fixing keyboard in 800XL + S Video cable question

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-12 13:58:27 UTC
From: so1@attglobal.net
Message-ID: <3aac7468_3@news2.prserv.net>
Source record: 38014

Hi all,

Some keys on 800xl that I bought do not work (mechanizm works, but no keystroke). Does anyone know how to fix these, or what parts to replace?

Also, does anyone have schematics for making the cable that will allow me to use the S-video input on my Sony Trinitron?

Kind regards,

--

Hi,

This is probably a dumb question and apologise in advance:
Working on a real Atari 800XL and one 1050 drive, I'm trying to copy a file from one disk to the other (I can do that easily in DOS3 but not in DOS2). I Type "C" then "D1:source.exe,D1:destination.exe" (assuming source.exe exists on the disk), but then I got an error message.
Can anyone please tell me what I'm doing wrong?

Thanks

Source record: 38045

Gene,

Sorry for the delay in follow-up. Mean 18 is pretty bad. Graphics
take a while to draw on the screen. Midi Maze seems o.k. but a bit
hard. The problem with producing these is that you need a special cart
since they're 1 meg carts.

There are two configurations I have seen. One is a large cart called
an XE Ram cart. This cart is about twice the size (both length &
width) of a standard cart.

The other option is a daughterboard called a 1 meg Rom emulator which
plugs into the chip socket on an XE cart. This same daughterboard can
be used on the 7800. Both boards use (4) 27256 eproms.

Took me a little while to dig up Atari's CX Master list.

Here's some numbers listed:

RX8100 - Mean 18 Golf
RX8112 - Jinks
RX8123 - Ikari Warriors
RX8124 - Midi Maze
RX8129 - Ninja Golf
RX8135 - Mat Mania Challenge

Take care,
John

Asteroids
Pitfall
Beserk
Burgertime
Frogger
Breakout (how many clones of Breakout are/were there... wasn't Arkanoid a B.O
clone ??)
Pole Position/Pitstop (everybody has played Pole Positon at one time or
another)
Zaxxon
Donkey Kong (...not mention Donkey Kong !!!???!!! by Nintendo... remember them
????)
Omega Race
Tron/LightCycles (every "worm" game was a rip off of Tron LightCycles)
Centipede (but alas, a fancy space invaders rip)

Galaga, Galaxian, Gaunlet and Missile Command have already been mentioned... I
am not sure about Spy Hunter as I don't recall this game ?!?!?! and I have over
3000 titles in my C64 collection.

(hmmm.... which one came first Galaga or Galaxian ?? I think Galaxian. And
Gaunlet may be the "mother" of all RPG's !!! naaaa... Zork !!! Yea, that's the
ticket, yea !!!)

Well, anyway... I could think of more but these should be added to any "most
famous" list. I think each one in it's own right, was a conceptual breakthru

that could only be immitated but not surpassed. The Zaxxon and Pole Positon views/perspectives, are/were a staple in the game programmer's arsenal. Oh sure you could improve the graphics but not the actual game play at time these games were released. (btw... I think, maybe Asteroids was more of a commercial console game hit than a home/consumer console hit)

If you really want to know what may be considered the most famous... consider which games are being "re-invented".... I've seen remakes of Pole Positon, Frogger and Burgertime during my web surfing excursion... maybe I'll search Google for a few of these titles and see what pops up the most... just for the fun of it !!!! :)

later...

1775. 800 green screen

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-13 08:22:36 UTC
From: Kyle Lavery <klavery@home.com>
Message-ID: <gNkr6.1863$VO5.19763@news1.rdc1.ab.home.com>
Source record: 37850

I picked up an Atari 800 today.... powered it up, and all I get is a green screen. I saw someone posted something similar to this happening to them on their 800xl, I figured id post this and see if anyone has any ideas.

Thanks!

Kyle

What I wanted to do was make disk images the same size as those megadisk images, I think they're slightly over 8K sectors. Like the ones from Yogi's Jellystone park. You know, you use the menu.atr in the first drive and the megadisk in the second drive and on boot you get a menu of all the progs on the megadisk. Not so much just for JPGS and DIG files but it would be a cool way of backing up my real floppies without making an ATR for each one. It looks like you can get about thirty-forty disks in one megadisk image.

Message-ID: <uOpr6.2880$8n5.984218@news2.cableinet.net>
Source record: 37851

thanks I got henrys house and waxworks now but I'm having trouble with the win800 plus atari emulator I can't seem to start any of the games or get my control pad to work on them my control pad is a quickshot 6 button control pad.

I also got a commodore 64 emulator (presuming that it was done by the same person/s) And i have the same problem with that if any of you have a readme file explaining how to use and operate either one of the emulator in question I would appreciate it being sent to me.

henrys house was made for the commodore 64 also and waxworks done on the spectrum aswell, which I didn't know about.

anyway thanks

Source record: 37852

On Mon, 12 Mar 2001 22:09:13 GMT, ronfucci@bellsouth.net drooled an
embarassing wet spot in his lap as he typed:

>I recently found I cannot link to the Mindfield site using a URL which
>was working fine under Netscape.
>
>ftp://atari8@ftp.mindfield.dyndns.org:2026/d:/emu/computer/atari/atari
>8-bit (400, 800, xl, xe)/

There's no password, and I'm using a different address, now
(dyndns.org will still work, but this one's more sensible) Here's the
proper URL:

ftp://atari8:archive@mindfield.emulationnet.com:2026

You should be taken directly to the Atari 8-bit area. This should
work fine in Netscape. Explorer users (as most Explorer users do with
FTP sites) may have trouble.

Source record: 37854

The mega images I have looked at only use standard 128 byte sectors and respond to MyDOS 4.5x. Couple of suggestions:
1) D/L one of Yogi's and just delete every file and replace with your files. Caveat - you are still limited to 64 files per directory so use a separate subdir for each disk.

2) Try Ken Sider's newish AtrUtil; you can create .ATR's with it and then import files or delete Yogi's and import yours with it. Caveat - I do not believe it will do subdir or DOS 2.5 files past sector 720.

With DOS 2.0 & 2.5, that action is accomplished with Option "O" Duplicate file on a 1-drive system. You cannot change the name in a single step.

MyDOS 4.5 uses the "C" and then just "D1:source.exe" assuming 1-drive when the destination is omitted.

1783. Getting rid of old Atari stuff, eventually

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-13 15:50:00 UTC
From: Ken Arromdee <arromdee@rahul.net>
Message-ID: <98lfj8$l5i$1@samba.rahul.net>
Source record: 37857

I'm not selling any of this stuff yet, but I'd like to know if there is
anyone here who really wants it, how much in demand some of it is, or if
I have anything particularly desirable that should be sold separately. I
haven't used any of it in years, and with the advent of good emulators, I
probably never will, especially since I don't have a power supply.

I have no way to know if any of this still works, lacking a power supply.
I suspect the computer and carts work, but the floppies will be chancy. There
are no manuals or anything else for most of these.

If anyone wants to trade I'm only willing to trade for Sega CD, PCE/TG-16 CDs,
or more modern systems, or DOS/Windows games on CD.

Atari 800, 48K, no power supply
Atari 800 cover
Pinball Construction Set (1 floppy, I don't remember how many floppies it's
supposed to have), with box (I only kept the box for this because it's flat)
Scott Adams Adventures 1-12 (floppy)
Super Zaxxon (floppy)
Jawbreaker (floppy)

Carts:
Basic (rev A)
Basic XL (with manual)
Chess (Parker Brothers)
Defender
Deluxe Invaders
Donkey Kong
Editor Assembler
Frogger
Gorf (I think this doesn't work on the XL series)
K-razy Shootout
Millipede
Monkey Wrench II (800 only)
Pole Position
Qix
Robotron 2084
Star Raiders

Manuals only: Anyone who wants these can have them free for a SASE:

Atari SX212 Modem
Indus Disk Drive, GT Data Manager, GT Estate Word Processor. I don't know
where the spreadsheet one is.

My favorite guess for green screen is a fried dram. 6502 cold boots running from ROM, gets far enough to initialize a few things<ANTIC, GTIA, to the green display> then crashes when it uses ram.

Screen output, even green, implies your system clock/timing is working which means you have at least partial function on ANTIC, GTIA, ROM, 6502. POKEY and PIA don't make a difference, so it really narrows it down a bit.

I would pull the memory cards, assuming you have 3/48k, and try booting it with rotating 16k memory cards.

Did you get my mail regarding how to use the emulator?

Maybe not..

On the Plus version you goto the File dropdown, then attach disk, then
browse to the ATR file. Once you have done that hit F5 to reset the
emulator and boot the disk in.

EXE files go in via the same FILE dropdown but use the exe loader there.

Is your joypad in the START/Settings/Control Panel/Gamepad or gaming
options interface..

If its not in there then Atari800win will not find it..

If its in there then the Atari / Joysticks dropdown is the place to
configure it. Initially it's set to none but a play with the spinner will
show your Joystick IF the above settings were ok.

Ok. Yes, I figured the actual computer has to be somewhat ok. Someone told me that it could be the ROM that is shot. I only have two 16k dram. I tried swapping those around (only using 1 of them at a time) and still the same problem. So maybe both of those are fried, or could the ROM be a possibility?

The only thing that militates against it being a //c is that red logo. But Franklin made a //c clone that did have a red logo, IIRC.

Yes I know those Mega disks. Infact, they are the ones I am converting over
to DI images for the TOS program 800XLDJ which is like APE. I have them all
extracted into the RAW files except for the DOS-menu program. As soon as I
can make a DI image of MyDos version 4.5 I will get started and make these
mega DI images.

1798. looking for comp video cable for 800

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-13 23:00:48 UTC
From: Ken Lee <ken.lee@sitraka.com>
Message-ID: <3AAEA6A0.DF12216C@sitraka.com>
Source record: 37868

Hello all. I have just acquired an Atari 800, but am not able to use it yet. I have a composite monitor that I'd like to use... it's a Commodore 1084S, and I believe it just has the one video in jack, not the separate chroma/lum jacks.

Unfortunately, the Atari only has the built in RF cable. It seems that I'll need a different cable (that plugs into its side) to use it with my composite monitor.

Does anyone on this group have one to offer? If not, I've had a hard time finding any dealers online who have it. What are your preferred online Atari resellers?

Was this cable (5 pin plug?) the same as the one used by the C64? I have my doubts, but that might make the search easier.

Any help would be appreciated.
Cheers!
Ken

It's a Laser 128, manufactured by the company that is now known as Tiger
Electronics or V-Tech. Essentially an Apple //c clone.

Richard

Whoops!

I should have known that. I helped a friend set up a mailing list for his piano technician business on a Laser 128. He eventually transferred it to one PC after another ...

What confused me when I said Franklin was that Laser made Apple clones but so did Franklin. Come to think of it, didn't the company that made the Laser have people from Franklin in their organization?

Come to think of it, aren't we completely off-topic now?

[The preceding was a rhetorical question and need not be answered.]

Yes, IIRC the ROM on an 800 was at least 2 parts. Something like a 4k and 8k mask ROM.

You could do the standard "Leave it on over night". That seems to work about 1/2 the time.

"Kyle Lavery" <klavery@home.com> wrote in message news:THvr6.2461$VO5.33048@news1.rdc1.ab.home.com...

That's the theme from what I think was a 60's TV show 'Peter Gunn'. I
believe it was written by Lalo Schiffron <sp?>. He wrote quite a few tv
sound tracks back then (including 'Mission: Impossible').

The 800 pinouts are here:
http://www7.ewebcity.com/atari/a8men.htm
It is really easier to build than to find & buy one. The 800 end takes a DIN-5, same as old PC-AT keyboards. I think I remember that those C64 cables might work?
One of the best vendors is Best:
http://www.best-electronics-ca.com/

Lalo did write the MI theme, but I am pretty sure that Henry Mancini gets the credit for 'Peter Gunn'

That sounds like it. It was Atari grey and all. Would be nice to have a
130XE in that design.

A guy in Canada is selling those monitor cables for Atari, C=64 etc...
on a regualr basis on Ebay. I got one, it was brand new in the package
and works just fine. Search for "Atari Monitor Cable" and you will
probably find one or two to bid on.

In article <3AAEA6A0.DF12216C@sitraka.com>, ken.lee@sitraka.com says...

Breakout was first and a huge hit at the time.

> And was Missile Command that popular?
Fairly. It wasn't Asteroids popular but was still a hit.

I'm sure I used to play these games on my Atari using the tape deck. I got Aztec Challenge and 2 other games at this same time

1. One of the games I am looking for was a simple enough. Basically all you did was go from the left side of the screen to the right jumping over things. I know there was one part where you jumped on only certain parts and avoided lava. Another board had rectangular sections of various widths and hieghts. You could either jump low, medium, or high to jump onto or between things. I though the game has Maya or Inca in the name, but I must be wrong because I can't find any games with either in the name

2. The second game is basically one where you escort people from one side of the screen to the other and try to aviod things that try to fall on you or come from under. Sorry I can't give anymore info on this one.

I'm almost certain I played both on tape.

An Atari 800XL was my first computer. I loved the old games and did some BASIC programs.

I recently got the XFORMER7.EXE emulator for Windows 98. I have a number of games in the ATR format on the Windows disk.

Dumb question -- How do I load an "ATR" image and run the games? I can start the emulator fine in either DOS 2.5 mode or BASIC. Just can't figure the next, probably simple, step. I cannot seem to find it in the documentation and my recollections on the how to of ATARI is close to zero.

Thanks

Are you sure that isn't Aztec Challenge ? It moves like you say and has high, medium and low jumps. There's two Aztec Challenge games you know! It sounds like the first one. Not Montezuma, that is up, down, left and right and even if it's a better game, I don't think that's the one!

You need some extra logic for the 8-bit like emulating the HALT signal. You don't have much advantage yet from just a replacement from cpu.

But when the CPU has 16Mb memory and/or can run at higherspeeds then people can develop special software using the extra instruction this CPU offers and makes software much faster...

The Aztec Challenge I've seen starts off with you jumping over and ducking spears. Then the second board you move left and right to avoid boulders. But you might be right about it being another version of Aztec challenge. Because I remember my Atari version and my Commodore version being completely different games. I'm gonna check out another version of it and the Montezuma game also because it also sounds familar. Maybe If I look around the house, I can find those old cassestte tapes and I'll know for sure. I'll get back to you and let you know what I find

Don't worry about the second game. I'm %110 that it was crossbow.

1829. returning to my roots

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-14 20:54:49 UTC
From: bo snyder <bobo_snyder@hotmail.com>
Message-ID: <B6D51A99.F2%bobo_snyder@hotmail.com>
Source record: 37951

hi everyone,

my name is bo and i recently have been returning to my old atari roots.

i recently bought a bunch of old atari stuff at the local thrift store for really cheap. i ended up with a 1200xl, 800xl, 1027 printer, magnavox composite monitor, a bunch of joysticks, a bunch of games, and 1 1050 floppy drive. i did not receive any software for the floppy. i only have found one game that was on floppy and it did work fine.

when i was younger around 1980 to like 1987 or so, i had first gotten a atari 400 system (which was upgraded to 32 kilobytes, wooo hooo!) then i got a 1200xl. around 1985 or 1986 i found a bunch of old atari stuff which included 2 indus gt drives, 850 interface, some old printer, and a ton of floppy software and cart games. i also had many years worth of creative computing (remember david h ahl aritcles?), computes, antics, and analog and other various magzine.

i loved that system. i had so much fun with it, but then alas, i turned 18 or so and i found someone who was willing to trade me the entire system and all the magazines and paperwork for a honda 750 motorcyle.

yes i regret the trade, but thats a whole another story.

anyway i have been trying to buy up the peices on ebay for my system and make a atari system and collection i would have died for when i was younger.

i had a friend on ebay so far buy me (i paid him of course) a pair of rana floppy drives (one doesn't work), a xe game system, and more other cool stuff.

well my basic questions are, what is the best way of transferring files from my pc to the atari and are there any nice plans to build ide interfaces for my old 8bit ataris?

i have a pile of old 2.5 ide hard drives that are around 540 meg to 1.2 meg and would love to use them in or with my ataris if possible.

if that is not a feasible idea, which is the best way to go for connecting the pc to the atari? sio2pc cable or that ape system?

if i should make a sio2pc cable, which one is the best one?? the 2 chip one or the 1 chip one??

i am probably going to make an old pentium 100 laptop which has no cderom drive into the slave unit for the atari.

but i really really love the idea of building some sort of an interface where i could use my old ide drives even if the capicity is halved (8bit vs 16bit, maybe use the other 8 bits as some sort of a mirroring?? LOL)

i also want to know what other cool hardware i can buid for a modest price that would work with the atari.. vga interface??? that would be nice since i can get piles of vga monitors for next to nothing, but finding composite monitors is like finding needles in a haystack. some sort of a 3 1/2 floppy drive? a 3 1/2 inch atari ST floppy drive to 8bit computer adapdter?? (that would be really awsome).

also what sort of operating system should i get for my atari? the rana setup is coming with the rana disks, is that all i should get?? or should i get sparta dos?? atari dos 2.5?? i am not sure what version..

i really want to be able to download stuff off the internet and put them on floppy so that i can use them like the atari was orginally intended. can i do that with the sio2pc cable??

well i am sorry about all these questions, but its been 13 to 15 years since i last really used an atari 8bit and they sure have gotten cheaper in price and there is quite a bit of cool stuff available for them these days also...

thanks everyone,
bo

1830. koalapad

hi all..

i have a another question, this time about a koalapad.

my friend gave me one that he found for like a buck at a garage sale.
anyway it does have the standard joystick connector plug, however it *DOES*
say "for use with Commodore Computers" on the back of it.

Will it work with the atari?? i do have (but haven't tried yet) micro
illustirator. or can i write a quickie basic program that will scan the
paddles and give me the values for the koalapad?

basically i just want to know if the "commodore" koalapad is comptabile with
my ataris?

thanks
bo

Congratulations on returning your roots... I returned a few years ago also.

I think the best way to transfer files between a PC and Atari is using the SIO2PC cable. Its cheap, and simple to set up. You can buy excellent cables on ebay for around $10. I recommend registering for APE or SIO2PC (personally I like APE).

Furthermore, IMO, maybe not the best, but probably the *coolest* way to transfer files is using a black box and floppy board from CSS. This lets the 8-bit talk to 1.44MB PC Format floppies and also SCSI devices like zip drives. Although the Atari can't read a PC-Format zip disk, its still very cool to use the zip. 100MB zips (and 1.44MB floppys!) make great storage media for the little Atari and since I/O is through the PBI port, it is lightning fast. Check out www.nleaudio.com/css for details.

For hooking an ide to an 8-bit, I have seen at least one mod for this. However, I don't believe that you will find near the level of DOS support that you would if you went with a black box or MIO. Someone else should pipe up here, since I don't have much experience with ide drives.

For vga support, you can connect a "Jam" device to covert composite video output into vga. I've heard the results are quite good, although I've never done this myself.

Ron:

Thanks...

Yes, this is XF2000. I can "assign" the ATR image to D1 using that right click menu. That's where I am stuck. How do I get the program on D1: loaded into memory to run? I can bring up both BASIC and the DOS 2.5 Screen fine, but then I am stuck.

Thanks

Jess

IIRC, XFormer relies on the XFD format of disk images. I would
personally reccommend Atari800Win (plus) for your 8-bit Atari
emulation needs. It's extremely faithful to the real thing, even down
to disk loading sounds (when SIO speed patch is turned off) :-)
Plus, it handles XFD and ATR images, as well as straight binary file
loads. You can grab it from most major emulation sites, including
www.emusphere.com (assuming eFront hasn't collapsed between the time I
posted this message and the time you check it :-), www.vg-network.com,
etc.

1842. Raw (track) disk images?

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-15 21:45:13 UTC
From: andy@plausible.org
Message-ID: <JJas6.38174$zV3.2846419@news1.frmt1.sfba.home.com>
Source record: 37990

Hey all, I'm just now getting back into the 8 bit world to relive my youth. I have an SIO2PC interface built, a re-written Linux-based host program*, and a little perl tool to manipulate 90k DOS images. (There are dozens of these kinds of things on the net, so I presume I'm following the normal course of action...).

The problems I'm having are with the Atari software. It's crap; or rather, the cracks are crap. They crash, they start at the wrong point, they hang. A lot of the images out there appear (literally!) to just start running at some arbitrary address and just walk through memory until they hit something runnable. The binary files are bizzare -- some will repeatedly load small chunks into a staging area and then copy the data into the correct location, often overwriting stuff they already loaded. Some have duplicated segments, some leave weird-looking holes in memory, etc... Even the cartridge cracks (which have no excuse for this behavior)

And the compatibility stinks. Some of it works fine under the emulator, but not on a real machine, or vice versa. Some of it runs when (L)oaded from DOS, but not when run as a SIO2PC "boot" file or from any of the minimal loader apps I've tried. I've even seen situations where a disk image will load from the PC host but not from a real disk (probably hardware, somehow, but it did seem repeatable -- timing issue?).

Thus my question: is there an archive somewhere of "raw" (that is, uncracked) media images? Not the ATR sector maps, but the real track images as can be gotten from a Happy 810 drive? My interest here isn't purely selfish; the original disks are pushing 20 years old now, and won't last much longer. I weep for the future if all we have to leave them are these terrible cracks...

Cartridges don't worry me so much -- a ROM will last decades at least -- but the disk images are a short-lived resource, and the copy protection makes them difficult (but not impossible) to back up. I'm hoping that someone has already started something like this. I can volunteer hardware and time, but no media -- like many other idiots of the late 80's, I chucked all my 8 bit stuff. Sigh.

Other random questionsi, if anyone has a clue:

+ What's a good sector copier for disk images? The DOS "J" command appears to use the VTOC to optimize away sectors that aren't allocated, which breaks down when the disk image isn't DOS. Most multi-disk games have images that won't copy using DOS, and I'm stuck running them from the PC.

+ Is there a good on-disk directory and loader? I found one on a disk
called "Anton's Binary Loads" which works well, but apparenetly
doesn't work for all binary files. I have some that can be loaded
from the DOS menu, but fail when run from the Anton loader.

+ Is there documentation on the "Happy" drive SIO extensions anywhere?
I just got one of these toys and would like to know what I can do
with it.

Many thanks,
Andy

* It's a command line tool, and still pretty minimal, but I'd be happy
to share it if folks want it. It's primary advantage is that it
lets me serve disk images without booting to (ugh) DOS, and seems a
bit more reliable than SIO2PC to boot. (I suspect the timing
involved command line in that program leads to lost frames, and
Atari DOS is really bad about retrying failed commands).

1843. [Epyx Shrine] Seawolf II

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-15 21:53:30 UTC
From: Manuel Polik <cybergoth@nexgo.de>
Message-ID: <3AB139DA.309BF721@nexgo.de>
Source record: 38056

Hi there!

Another update on the Epyx Shrine (http://home.nexgo.de/cybergoth),
this time with the Atari 8-bit only title 'Seawolf II'. Well, at least
sort of, since there's an arcade original. But that's not from Epyx :-)

A little page for a little game. The next one about "Jumpman Jr." will
of course be another big one!

This is BTW the 10th page covering an epyx game, so a first milestone of
the 50 planned pages is reached. Another 40 games in another 80 weeks
and I'm done :-)

Greetings,
Manuel

No, they are for the most part consistantly bad vs doing a lot of different
things bad. They may achieve it by different means, but they mostly do the
same stupid thing.

That is, they lower ramtop then jump directly to the screen initialization
code in an 800 OS vs use the vectors like they are supposed to. This breaks
on anything other then an emulator running in 800 mode or with a modified
OS. Ditto for real 8 bits, 800 or modified OS.

> (which have no excuse for this behavior)

This is pretty much a feature of the Atari. The DOS/OS allows you to have
both a run and init vectors. Let's say you have 10 things to do before you
run your actual code. You could actually code all 10 things to work from the
same exact memory area, $600 for instance, and they will sequentially load,
run, and return control to DOS.

<snip>

At one time I posted the code to the newsgroup that fixed CARTCOPY and another code snippet that would repair improper vectors on the files created using it. Never been a pirate, don't play games, wasn't that important to me it gets fixed.

Needless to say, nobody took on the task to fix the files. Lots of work I imagine and most people would rather just not run the files then do that much work.

I just used DISKCOPY or something similar. Public domain, single density only, wouldn't copy protected disks. I think there is one called Black Rabbit or something that people like.

1846. Atari DOS Quandry

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-16 03:24:08 UTC
From: Luigi Mattera <lmattera@yahoo.com>
Message-ID: <150320012224081522%lmattera@yahoo.com>
Source record: 38052

I just got a 130xe & 1050 disk drive from auction on eBay.

It came with a "SpartaDOS" disk that won't boot. All I get is "BOOT ERROR" over and over.

I do have a manual for both SpartaDOS (claims 1.1, don't know about the disk..) and Atari DOS 3.0, and they both say put the disk in the drive and switch on the computer..

So I'm stuck without a DOS. Obviously I can't use the drive without one.

Does anyone have any ideas?

My main system is a Mac, so I don't know if SIO2PC would work or not. Since I've got an actual 1050, I'd just like to get some stuff on disk.

I do have an 850 interface and a 56k sportster. Could I get the two working together and download a DOS from somewhere?

I guess I'm looking for options on where to get software for my computer.

Any help would be appreciated.

- Luigi.

1847. APE for the future?

I am currently evaluating both APE 1.17 for Dos and APE 98.
I would like to register one version but what happens this fall when we move to Windows XP and neither version of APE will work anymore?
I suppose one solution will be to boot up the computer with a Dos floppy (ugh) and run APE 1.17 off a non-NTFS partition, but this seems crude.
Why does APE 98 not "see" the Serial Port under Win 2000 anyway? The program runs but is not usefull under NT.
Does anyone know if any updates are forthcoming since APE 98 is obviously 3 years old now?

TIA

1849. FS: More Atari! Preferred Customer Discount!

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-16 07:50:04 UTC
From: Bravo Sierra Computers <atari@pacifier.com>
Message-ID: <Pine.BSO.4.21.0103152340320.29126-100000@shell.pacifier.com>
Source record: 37986
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.atari,rec.games.video.marketplace
Body handling: HTML body converted to readable text

e-mail: atari@benjamin.net

Lately I've added more Atari inventory so checkout my Catalogs. Even my 8 Bit Atari Software grew by 25%! And I'm offering a 20% Discount to my regular customers! E-Mail for Details on Redeeming this offer! I'd like to say Thank You for letting Bravo Sierra Computers Support you & your Atari Needs. And if you have'nt bought from Bravo, Give Ben a Chance! I can be quite Beneficial. And remember, if you can't come see me today? Come see me tomorrow! E-Mail or call Ben anytime at (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. My customers love the speedy service! I also have lots of Atari Reference Books. Which I can Mail by Book Rate!

I've switched ISP's! Try www.pacifier.com/~atari or atari@pacifier.com and as always www.atari.benjamin.net and atari@benjamin.net still work but are being redirected to my new ISP and since I've moved, I have revamped and updated my WebSite and all my WebPages. So Check it out and, If you don't come see me today, come see me Tomorrow!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari 64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net while you Download Free Catalogs directly from my site. If you can't get my Catalogs that way, Feel free to Request catalogs by E-Mail. Really, it's not an inconvenience. I ask that you specify Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your full Mailing address so I can figure Shipping & Handling. I'll be back after the weekend. Bye!

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or atari@pacifier.com instead of NewsGroups as I am swamped and I find it hard to keep up with reading the NewsGroups.

I update my catalogs once a week. Just before this message is posted. So when you see a new posting, check my Catalogs. After I post this message. I'm off for the weekend. But I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or atari@pacifier.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Bravo Sierra Computers has Moved! To a New ISP! Now Hosted on pacifier.com!!! Atari 8 Bit, ST and Jaguar Hardware/Accessories, Software/Games & References/ Books. FREE Catalogs on the web at http://www.pacifier.com/~atari or at Ben's SubDomain at http://www.atari.benjamin.net Catalogs Requested by and Received Through E-Mail at atari@pacifier.com or atari@benjamin.net and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

If you're such a windows fanatic, what are you doing in this newsgroup?
There's no one in the world holding a gun to your head and saying that you
have to upgrade(downgrade?) to the new windows. I'm using my old 486 with
win31 as a permanent APE drive. 486's are cheap and available and much
handier than your main pentium unit. You could probably pick one up for less
than it costs to register APE!
No offense, I just stopped upgrading windows at the WIN98SE edition, if it
ain't broke- don't fix it!
Mo

Your booting problem may not be the spartados disk, I would try another known working disk before you throw that spartados away. If it errors on all disks then your head's out of alignment or the parking sensor is out. If it makes a rapid clicking noise when you insert a disk or it tries to access, then it's probably the parking sensor. There's a web page on fixing that but I can't remember the URL. I usually just find another drive and swap out keeping the extra for parts. Alignment is trickier, you have to open the case, connect the drive with it open. Loosen the screw holding the parking sensor and repeatedly try booting a disk while moving the sensor back and forth hairs at a time until you get a boot. The last time I did it, it took about an hour of patient rebooting but it came out perfect. The sportster is not gonna cut it 'cauze it's probably a winmodem that won't work without software modulation, it's too fast anyway. I can't remember the top speed of the 850 but I know it's not nearly 56k. Find an old 300 baud modem or acoustic coupler and look up a couple of BBS's to call, that's about the best you're gonna do.

I get this error frequently with various combinations of console, disk drive and DOS. I find there is a timing issue between the drive and the console. One method that seems to work: turn on the drive, place the disk into the drive, latch it and then quickly turn on the console right after latching the drive. Hope this helps.

You might consider a dual-boot setup with Win 98 + Win (Whatever). Check out
www.winmag.com and/or
www.v-com.com (makers of System Commander).

I have a telecom disk that boots. I'll try some of the others
tonight.

Definitely not this problem.

Hmm.

The Sportster is external. As I have a Mac as a main computer,
WinModems won't work. In any case, I know the difference between a
winmodem and a real modem and would never buy a winmodem.

I do have an 830, but I seriously doubt my cordless phone will work
with it..

I was just curious if I could do a null modem download of DOS onto a
floppy. No, it isn't going to be fast, but what other choice do I
have?

- Luigi.

My favorite from the early '80s was always SECTOR COPY which was before XE COPY and other single pass apps for expanded memory machines; it allowed choices from a menu for drive #, format y/n, sector range, empty sectors y/n, verify y/n, & number of copies. Before that, David Young had a modified Dup.Sys with a Super-J that ignored the VTOC and replicated 1-720 absolutely. MyDOS 4.5 has a very versatile "J" option in any density when you can remember the parameters.

Hey - Luigi.
Only 2 easy solutions:
A) Get SIO2PC, boot with it on a friends PC, format & create boot disk on 1050 as D2.
B) Secure another boot disk; members of this group have been known to mail or deliver them in some manner.
BOTH of these depend on a proper functioning 1050!

There are some other more involved options based on your abilities with hard and soft ware. The resident disk handler and some Atari Basic code can help you diagnose that drive along with the tips in Chainsaw Mo's post.

With a LOT of data statement typing, it is theoretically possible to create a bootable DOS disk from scratch and a Basic cart. This is only feasible when you are extremely remotely located.

BTW that Sportster will lock down to 300 or 1200 or 9600 with the correct setup string; possible problems are:
1) Is it real modem or Win? Probably real if Mac compatible.
2) You need drive access for terminal program to use it.
3) You need drive access to save what you download.

1859. Re: APE for the future?

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-16 15:33:54 UTC
From: Dan Vernon <danv@whoever.com>
Message-ID: <98tbgb$v5e$1@brokaw.wa.com>
Source record: 38053

Microsoft really made a mess of the serial port (among other things). The serial communications api for NT and windows 2000 behaves differently than win9x. Furthermore SIO2PC and APE (even Ape98) don't use the windows api, but rather are 16-bit apps and write directly to the port, just like a DOS application would. This DOS compatibility is somewhat supported in Win9x, but not in NT/2000.

My solution was to just write my own version. Its a console app that runs in NT/2000 and also in Win9x. Actually it runs better in NT/2000 since the ring detect is absent in Win9x so you are forced to poll the port yourself and burn a lot of cycles.

I called it 810Win (although it will mount 8 of any size atr) and am considering releasing it as freeware or shareware soon. There's not much of a UI yet (think command line), but its quite functional for all of my needs I don't really care about P: or R: emulation... but I may add it later. I'd also like to add a simple UI... perhaps as an hta.

If you are interested in helping me out in beta testing, let me know. It really hasn't been run on any machines other than mine, so I'm sure some bugs are still lurking.

Hello Vidar,
since I am located in Germany things may work better for you. I just
ordered some games from LK Avalon, all I had to do was a bank transfer
to poland - and voila the games are there. Unfortunately I have only
Miecze Valdgira and Hans Kloss left (from your list, besides that I have
30 other polish games left). Let me know, if you are interested. The
price is 7DM (german marks) or 4 Euro plus p & p per game... -Andreas

Yep, Miecze Valdgira 2 is better, but whenever you pick up an item, it
uses polish words instead of simple icons. A.D. 2044 is a great graphic
adventure with automap, but again with polish language... I have no time
to learn polish !!
My favorite polish games:

1) Deimos (a great Montezumas clone!)
2) Fred
3) Rockman
4) Wloczykij (means: The wanderer)
5) Operation Blood
6) Humanoid
7) Smus/Smush
8) Klatwa/The Curse (english version!)
9) Miecze Valdgira 2 (the sister of Valkyry ??)
10) Robbo

international games:
1) Archon
2) Montezumas Revenge (16k)
3) Zybex
4) Cavernia
5) Pitstop (Part 1 - 16k)
6) Fort Apocalypse
7) Dark Chambers
8) Star Raiders 2
9) Leaderboard
10) Bruce Lee

Pd games:
1) Golfer (Bewesoft. Jiri Bernasek)
2) Fortress (a tetris clone)
3) Gauntlet or Teltnuag (a shooter)
4) Break it (Oliver Cyranka; Breakout Clone)
5) Super Dash (Oliver Cyranka; Boulder Dash Clone)
6) Let`s Groove (F.T. Wittenmayer; a HERO clone)
7) Livewire 1+2 (Tom Hudson? a tempest clone)
8) Megablast I (Thorsten Karwoth; a shooter)

9) Warsaw Robbo (a Robbo clone)
10) Warsaw tetris (a Tetris clone)

and many others to mention. -Andreas

1866. Re: Hello has anyone got henrys house for atari emulated?

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-16 17:28:41 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3AB24D49.7371C019@mail.uni-mainz.de>
Source record: 37962

Well,
the background story is almost the same as Jet Set Willy. But the graphics are truly outstanding !! Created by Chris Paul Murray (Mr. Mirax Force) this game has 8 very detailed and colorful screens. Something to show these Nintendo (NES) and Sega (Master system) guys... The intro shows all avaiable game screens. You are little Henry, last night you visited your fathers laboratory and drunk something with a nice glowing color. Unfortunately right after that you are now as big as a mouse and have to battle your way through 8 different rooms, like bath room, kitchen, etc. etc. A great game from Mastertronic, but very hard to play with 3 lives. Just use CPM (remember: Chris Paul Murray) as a password on the title screen for infinite lives... -Andreas

P.S.: CPM also gives infinite lives in Mirax Force (unfortunately this does not work with The last Guardian, Winter Challenge, Gemstone Warrior and other Chris Murray games)...
P.P.S.: Which system was called Genesis in the US - Sega or Nintendo ???

Go to an Electronics Store preferably one that sells Radio repair parts, or get on the phone and call them. What you need is Nickel Print, it is a compound like the liquid silver pen but in a bottle and much cheaper.

Find the trace that is cracked and with a Needle after the bottle is shaken to mix up the compound as it has been setting quite a while cover the tip of the needle and apply to both sides and through the crack. This can be done on the bend area of the membrane. You can beef up the connect areas of the membrane with this compound also to replace worn traces. Let the compound completely dry and then test the trace with a Ohm meter, They are cheap at Radio Shack. Trace completed? If so then plug in the keyboard without the screws installed test the keys, if ok then remove and replace all screws. Your board is fixed for less than another computer or keyboard.

I think we have the original software companies to blame for this, including Atari. If they hadn't been so paranoid and used such heavy copy protection we might have decent archives today. That's one thing we can thank the early days of microsoft for, their stand was not in hardware protection but in legal protection.

Source record: 37967

hi everyone,

i just wanted to let you know that i tried that koala pad and it seems to work a little bit, but i wonder if it is not working correclty.

i plugged it into joystick port 0 and typed up a little program that just prints out the readings of paddle(0) and paddle(1)

anyway on the x axis, the paddle readings range from 3 on the far left to about 5 which is about 3/4 of the way to the right. then on the last 1/4 the values range dramatically between 5 and the 200's.

the y range is the same way.. 3/4 of the way it only ranges from say 3 to 5 for the paddle reading then the last 1/4 of the way it does the wild ranging of 5 to the 200's. so only a little bit of the pad is actually registering correclty as far as i can tell.

my quetsion is this, does it matter that it is a "commodore" koalapad.???? i thought that they were basically wired the same and most like hadd the same resistances since they both use the same type of connectors?? or is there a problem with my atari??

thanks bo

I don't know what software you are using on the 1040, but if it is a
true genealogy program, allowing export of GEDCOM files (.GED) you
should be able to save them to a floppy and then import it to a GEDCOM
package on a PC. If you have any worries about this then feel free to
email me direct.

Actually, yes. I just double checked, and according to the 1050 fold
out manual I have, it says drive "1".

1882. ATARI 8-bit 256k ICD MIO with SCSI hard drive Item #1221210739

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-17 04:42:04 UTC
From: "Gary McClain"
Message-ID: <3ab2e95f.3987936@spamkiller.newsfeeds.com>
Source record: 37978

The ICD Multi I/O board (MIO) is a complex peripheral device which
adds exceptional power to the Atari 800XL or 130XE computer. The MIO
gives the user five additional hardware functions not available
with a stock 8-bit Atari computer. These are: a parallel printer
interface, a serial interface
for printer or MODEM, a printer buffer, a bootable RAMDISK, and
an SCSI/SASI interface for hard disk drives. An optional sixth
function (80
column board) may be added at a later date. This 256k MIO was
used to run an ATARI BBS quite a number of years ago and was working
fine when
it was stored, It includes the MIO base unit,Instruction manual,
software,SCSI hard drive Seagate 1096N and SCSI cable. I couldn't find
the power
supply adapter. This needs an adapter to use on the 130XE.
SHIPPING IN USA ONLY. Payment must be received within 7 days of
auctions ending.
Shipping charge USPS MAIL $10.00. PS:The ICD/FTe Multi I/O (MIO),
all versions, can use both AC and DC supplies. But stick to voltages
of at
least 6.2-7.2 V. AUCTION ENDS Mar-18-01 10:36:44 PST

Message-ID: <ewHs6.171921$bb.1642795@news1.rdc1.tx.home.com>
Source record: 38058

Hey there good Atari people!

I recently acquired a seagate drive with an embedded controller. It's a 1480N. It has a SCSI II interface. I was wondering if the Black Box should work with this drive. I tried it out to no avail. My old 30 meg drive and Adaptec 4070 controller work great on the BB. An older seagate embedded drive with a 'plain' SCSI interface I have also works great. I couldn't get this drive to work though. So, I'm wondering if it's the drive or, if the BB simply doesn't work with SCSI II. Thanks!

David

1887. 65816

Source record: 38059

Hey there good Atari people!

I recently acquired an 800xl with a Sweet 16 daughter board and I was wondering if anyone knows of any applications, programs, OS's, etc., written to utilize this upgrade. I found one thing on the net. It is a system information type program. It works on a 6502 machine as well as a 65816. Gives memory information, performs benchmark tests, etc. I also have version 1.1 of MAE assembler. I think there is a version 1.2, but I couldn't find it anywhere. I know that 65816 upgrades were very few and far between. Anyone got any clues? Thanks!

David

1888. My Ataris died :-(

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-17 14:05:11 UTC
From: oliver@knusperkopf.de
Message-ID: <nuqv89.ti2.ln@gmx.net>
Source record: 38060

Hi everybody,
can anyone tell me what happened to my Ataris?

Today I wanted to copy some games via sio2pc onto
disks. So I connected my 800XL to the TV (no further
cabling so far) and turned the power on. The TV showed
a grey screen with some stripes and I could hear a hum.

I switched the computer off, disconnected it, got a
800XE and tried the same. Same symptoms. I tried this
with a 600XL and a 130XE, too. Same symptoms. All four
computers worked fine around Christmas. They have been
stored in the cellary during winter.

Don't Ataris like cold temperatures of less than 10C (~50F)?

Who can help?

1889. DI Mega Images are coming ....

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-17 14:53:56 UTC
From: ebaiz@skyenet.net
Message-ID: <8UKs6.91$Mh1.2053@newsfeed.slurp.net>
Source record: 38061

Hello all,

The Mega DI images will be coming soon. I have all the files extracted
from the ATR mega images which can be found at: http://atari.webjump.com/atari0.html.
I used a program for Windows (had to use my wife's PC) which can be found
at: http://home.columbus.rr.com/ksiders/atari.htm. Now all I have to do is
to put them together. I need to have a DI image of MyDos 4.5. I have to
make it A friend of mine is bringing over a copy of it on an 8-bit disk.
I just need to load it into the 8-bit computer and then hook up the 8-bit
to my Hades and then tell MyDos to format a disk and put the DOS files on
it. Then the image will be made.

Having the MyDos DI disk, I can then format some big disk images and put the
file into the them. If this does not work I can always to a regular format in
high density using 800XLDJ. I will have to create two disks for each ATR
mega image file. There are 22 ATR mega images and all but the last 2 or 3
have lists that can with them.

I have already tested things out and everything seems to work. You need to
remove the basic in the XE in order to get some games to work. You really need
MyDos to load some of them because of the length of some names. There is also
a program where the ATR mega images can be found that is some sort of a
disk directory loading program. I could not extract the files from this atr
file, so if anyone has an 8-bit program that will bring up the directory of
an 8-bit disk and load the programs on it, please let me know. I could create
a DI image file of it and include it in the Mega DI images I am creating. Of
course I would just need theraw 8-bit files.

That's it so far. Any questions, comments, please email me or leave a message
on this User's Net...

>What is Autotect please, I am not familiar with this?
The autotect is like the write-protect switch you get on 1050 drives, but
the autotect differs slighty it either allows write to all disks or no
write at all regardless whether the disk has a write-enable notch or not!

Also have the Atari 810 technical manual, but no cables or psu!

No. There was a cart-horse thing going on. Nobody is going to write
applications for a device that isn't widely distributed and no one is going
to buy a device that doesn't have applications/tools.

This could have happened since FTE did the Sweet 16 upgrade and had the
rights to the OSS languages. I don't really know the whole story behind it.
Ever heard that fable about the blind men and an elephant? One thought an
elephant was like a snake, another thought it was like a tree, etcetera,
depending on the part they touched.

It's supposed to have built in BASIC so it should come up to a blue screen
with a prompt that says

READY

They had really cheesy power supplies on some, only rated at 1.2 amps and my
800XL draws 1.2 amps. It would be one of the first things I would look at
anyway.

Both Atari and C64 used the same technique for paddles. They have a counter
that determines how long it takes for a pin/citor to charge to logic level
1. The C64 used different values then the Atari as you can obviously tell by
now. You may be able to make a dongle that adds more resistance in series
with the controller to get it to go full scale. I wouldn't reccomend
changing the capacitors in the Atari to get the readings on scale.

There was a huge mistake<IMNHO> with the DIN connectors on the back of the Atari. They made it such that the power jack and monitor jack can be switched. That would be the first thing I would check, then check the power output of the power supply for 5V.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

I haven't looked at more then a few titles and that was years ago. The bulk of the busted files I saw were cart conversions to files. The wisdom of using heavy copyright protection is kind of a different and separate issue.

As I have stated, I have four legal copies of ARs and three routinely fail to pass copy protection. Doesn't seem like a wise move to me of course since I have ~$150 worth of legally purchased software that I can't use. IOW: They screwed a person who actually played by the rules and bought the software with their copy protection while not stopping piracy. AR wasn't the only one either, Montezuma's Revenge and countless other titles bit the dust on me.

More at issue here with busted files in the archives is the high price of disk drives => people bought carts instead of drives and the hack program that pirated them is a piece of crap. Well, it works fine if you have a real 800 anyway.

At this stage of the game, we really seem to be winding down, at least I am. People have the energy to put the archives up, but don't have the engery to go through hundreds of files patching each one and sorting by compatibility. I don't blame them, in pretty much the same boat myself.

Have you tried the dd command in Linux? If you give it the right parameters you should be able to get a raw dump. I've never tried it because my machine had a broken 5 1/4 drive, but I remember seeing a webpage once with an example parameter list.

Someone could potentially create a kernel module that would let you plug in atari 8bit filesystem support. I don't know enough to know how possible or desirable this would be though.

I'd like to rescue some of my old titles as well. I've got lots of games on tape, and several on disk. Many of my tape games are actually stored on disk, as I had a utility on the Atari that let you transfer tape games onto disks and create compilations with several tape games on them. It had quite a high success rate, even with multiload games. I image something like that would be useful to allow disk images to be created from tape games.

FamilyNet Newsgate

For the past year JYBOLAC has been chatting every Thursday night at 8 pm CST, and we have always wanted to make a time that was more convenient for our friends across "the pond". And after talking to our members in Sweden and the Netherlands (Jorgon and Mr. Atari) we concluded that 8pm Sunday evening would be a good time.

So this week will be the beginning weekend of the JYBOLAC Europe Chat, meeting at 10 am CST/8 pm GMT at the usual location...

http://stargate.cs.swau.edu/atari

Hope to see you there in 11 hours! ;)

Sincerely,

Doctor Clu

Yes, 8/25-8/26. www.computerfest.com.
Although if you are into the flea market part of these, the Dayton Hamfest is arguably better.
On the other hand, half of the old (and new) stuff is ham-radio related. I've never been into ham radio, but I still like the hamfest. It's also expensive. They sell a 3-day ticket for about $22.50 ($16.50 advance). At least they moved it from April to May. Some years it was mighty cold walking the outside flea market.

>Donkey Kong Jr.

For the Atari? Not that I can think of. There is a Donkey Kong 3. That was made not too long after Donkey Kong Jr. It's got a guy called Jumpman in it instead of Mario. It wasn't put out on the Atari series if I remember right. Then of course there are all the new Donkey Kong games for Super Nintendo, Nintendo 64 and Game Boy... but that's another story...

could be almost anything. Useally one of the chips on the data/address
line is holding the line low/high. could be processor, antic, ram,
mmu, roms, pokey, pia. sounds like the gtia and clock are working, so
you know where not to look. If you have a socketed chips, you are
lucky. het a known working one and strat swaping chips till you find
it..

Hi!

If you're looking for an boxed Mask of the Sun from Broderbund then you
have the opportunity to bid on it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1221177854

The game is complete with two original discs, manual and big cardboard
box (shows some wear). I ship worldwide!

I also have:

MASTER OF THE LAMPS and DRAGONRIDERS OF PERN on ebay.de currently!

Hope to see you there,

Andre

Does anyone know where I could get an Atari Maria graphics chip? I would like to design a Maria upgrade for the Atari 8-bit systems, but I am lacking a supplier and technical info. :-(

Good news though, I've redone my website so it works again. :-) Also, I'm designing a PCB layout for my SID upgrade project (remember that one? :-) that I will upload as soon as it is finished. I've found a SID chip supplier so I'm ordering 8 this week, and I will hopefully have a prototype built by May!

>There is a Donkey Kong 3.
>That was made not too long after Donkey Kong Jr. It's got a guy called
>Jumpman in it instead of Mario.

I don't want to be nitpicky, and yet...

"Jumpman" was the name of the character in DONKEY KONG, before he became Mario. (Mario, AFAIK, became Mario in MARIO BROS. Luigi first appeared in MARIO BROS., as well.)

DONKEY KONG 3's protagonist was gardener/horticulturalist/greenhouse-sentinel "Stanley." It was the only time Stanley ever appeared in a Nintendo game.

BB
> simply doesn't work with SCSI II. Thanks!

The BB can handle SCSI-1 by default, but can be modified for SCSI-2, you
have to add a chip to make a parity signal and maybe add termination power
to the BB scsi-bus, termination power is not always needed.

For termination power you can just run a wire from a +5v location to the
correct location on the BB connector, this place is unused...
For parity you need to add a special chip, info can be found on the net.

Hello dave, hows that atari going,

Anyway re maria chip and a8's, I wish you all the best, I dont think it's feasable/possible as the original chip wasn't manuf. by atari, this was manuf'd by general consumer corp, who originally designed the 7800, apparently atari purchased the rights to the a7800 and the maria chip from gcc, because atari were about to sue gcc over an unrelated issue, anyway you'll need A 7800 precific version 6502, and the monitor/os rom, overwise the chip simply wouldn't work, for if it did, Atari or someone else would have come up with an upgrade or two, or even a 7800 emulator for the a8

Happy Atari'ng

Most will agree that APE or SIO2PC give best results for data transfers.

One other option may exist. That working Rana should be double density capable
and allow AtariLink from HiasSoft to read/write A8 disks on the PC 5.25 drive.

Hi Gang!

Does anyone know/have the game "Blackout"? It was quite simple, written in Basic and sold in Germany under the "Europa Computer Club" wrapper back in 1985. The backside of the cassette had the C64 version on it.

Basically, the gameplay is getting to the exit in a darkened room avoiding bumping into the furniture.

I�ve been searching the �net for this game for years now.

Anyone?

Frank

Although I never had a 2600 and I am not familiar with the game Surround, I would imagine it probably would predate Tron in it's many incarnations. Although... I'd go out on a limb and say that Tron actually became the most "famous". It's for that reason that I assume that most worm games since Tron are Tron wanna-be's...

btw... I used to play a Tron (light cycles/worm) type game on either the Colecovision or Intellivision... I think it was called Snafu or something to that effect. I imagine that was probably a ripoff of Surround because now that I think of it... it probably predates Tron, too....

Ummm... just to be clear... when I refer to Tron on a home console or computer, I am refering to any of the Light Cycles clones, but the actual Tron game as it was introduced as a commercial game was four games in one... the MCP cone, the mechanical spider thingies, the tanks, and the light cycles (sorry, that's the best discription I can give !!) I played the hell outta that game in the local beer joint and the bartender would give a friend and I a free pitcher of beer for beating his high scores... needless to say... we pumped a lot of quarters into the machine... would have been cheaper to just buy the beer !!! :)

later...

1928. Manual for 130XE / 800XL

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-19 09:00:13 UTC
From: Thomas Haenselmann <haensel@informatik.uni-mannheim.de>
Message-ID: <994hh3$qr0$1@trumpet.uni-mannheim.de>
Source record: 37902

I have bought an 130XE with a SIO2PC cable. I would like to get to know the basic- and io-commands and maybe a general introduction into to 130XE but have no manual.

For Commodore procducts there are many scanned manuals and guides on the net however for the Atari I have found little scanned information.

Can anyone help me?

Thanks a lot,

Thomas

Howdy Bob

>You have an Atari that will read a CD-ROM?

I'm not sure you replied to my message (as I read your message, the original
was already gone), but...

I have a CD ROM player connected to my BlackBox
It will play audio CD's.
Somebody is working on more software.
The ASPI (advanced SCSI Programming interface) software for the BB is in beta.
The Audio CD player software is in Alpha, as is the SCSI monitor.

CU Mathy van Nisselroy

PS I'm wondering if CD Text can be read on CDROM players without CD Text
support in firmware.
PPS CD Text is where you have the name of performer and song stored on the
audio disk. Mini-Disks have it. Now they added it to CD's.

Termination power is needed for SOME SCSI interfaces.

BOB PUFF told me the Black Box DOES NOT NEED IT. DON'T connect +5V to the BB
via the SCSI port. You can get into trouble doing so.

1934. 1MB 30 pin SIMM upgrade, beta schematic online

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-19 13:47:27 UTC
From: nisse-ma@reze-1.rz.rwth-aachen.de
Message-ID: <9952lfmaq6@nets3.rz.RWTH-Aachen.DE>
Source record: 37908

Howdy folks

The schematics to my 1MB 30 pin SIMM memory upgrade are now available at
http://www.holyoak.com/atari/ (click on 400/800/XL/XE)

As soon as I get the last bugs out, some PCB's will be made.
At the moment it's running 100% OK on my XEGS.
My 800XL and 800XE have timing errors.
Help is appreciated!!!

features that make my upgrade different:

- no loss of (software control over) BASIC, OS RAM, Selftest and Missile
Command
- no loss of data
- no fancy addresses
- no incompatible addresses used
- no loss of separate ANTIC and CPU access

CU Mathy van Nisselroy

PS there should be a text up there soon telling you a bit more about the
upgrade.

BK>You have an Atari that will read a CD-ROM?

Why not?
I have an ATARI with msc interface. It allows to use two ide devices (e.g.
one hard disc and one cd rom). And there is of course the so called black box
for scsi devices.

Why do you want to know?

Tschuess,

Frank

1936. FA: New/Sealed Atari 400/800/XL/XE Software & Books

Newsgroup: comp.sys.atari.8bit

Hello there,

I have a copy of Wizard and the Princess by Sierraventure up for auction on Ebay. The software is complete as far as I can tell, and is in excellent condition. It would appear not to be used, as the original shrink wrap is still on the packaging, however it has split down the side probably due to ageing.

Here is the auction info:

Atari 400/800 Wizard and the Princess
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1223289807

Thanks for looking,

Richard.

This may have the stuff your after, Has the following areas covered.

Atari BASIC Commands
Atari BASIC Functions
Color Codes
I/O Devices
Error Codes
Joystick Codes
6502 Assembly Language Mnemonics
Useful Memory Locations to PEEK and POKE
Player-Missile Memory Area Layout
SOUND Values
XIO Codes

Hope that helps.

Also of help http://www.cyou.com/~richard/atari-docs.htm though its mainly
game manuals.

Of
> course I would just need theraw 8-bit files.

I found a binary file loader program that I've used on a couple of game
compilation disks that I've made for myself. Can't remember the name of it
or where exactly I found it. Probably UMich. But, it works with the
joystick and displays a list of the binaries on your disk, and you just
select the one that you want and hit your trigger and it loads. You still
have to hold down option. But, I've got it on a MyDos formatted disk. Is
this the kind of thing you're looking for? If so, I could email it to you.
Let me know.

> program runs but is not usefull under NT.

Windows NT (Windows 2000) does not support the VxD driver model
that Windows 9x inherited from Windows 3.1. The user interface for
Ape'98 runs under NT, however the functional parts of APE do not.

> but not in NT/2000.

APE'98 has a pure Win32 user interface, and a VxD driver as its
core. APE'98 does not contain any DOS or console-mode applications, nor
does it interact 'directly' with serial hardware like a DOS application
does.

Because of abuse by people basically running robots to mirror
the entire disk I was forced to take it down.

I tried to put it back up a number of times but the same problem
occured each time. I don't have the bandwidth to support people
trying to download 650mb off me 3-4 times a day. =(

Go to the URL below and get Eric Bacher's DIS6502, which is an
excellent interactive 6502 disassembler.

It has many features designed for the Atari 8-bit, but works just
great for doing non-Atari 6502 software. Its free software.

> I don't know if you're using sio2pc or ape software on the pc side.
> You do realize that you don't load a .exe/.bin/.com file into the
> sio2pc or ape.

If you have game EXE/COM files on the PC that are not in
disk images (ATR) you can load them with the ApeLoader boot loader
software.

Set the PC-MIRROR drive to the directory where your Atari EXE
files are and boot from the pc-mirror. The interface is similar to
other boot loaders.

The pc-mirror boot loader runs completely in the bottom of the
6502 stack, so it will load anything, even programs regular boot loaders
will choke on.

No real difference except that these images can be used with the TOS
program 800XLDJ which allows any 16-bit or greater Atari computer to be
used as a file server for an 8-bit computer.

A little while back there was a thread re this game, a few people wanted the game so I sent them the atr's. Sadly I wasn't aware they don't work 'as is' until Chad sent me a message re it booting with 'UNKNOWN OS'.

Slightly odd as Aaron tested them and he's pretty damn hot on the sorting of what's working and not. I get a feeling they need some form of DOS loader that might have been removed for the boot versions.

Anyway's, for those that got it from me you can either get the megaimage number 16 and a menu.atr for it or give me a mail back and I'll help you.

The mega-image works 100%

Couldn't you put some limits checking in? Not more than 1/meg per day
per IP or something? Or track the downloading IP and send mail asking
them not to mirror all at once?
```

1969. Locked Images in APE 95/98

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-21 11:58:29 UTC
From: llpwhite@cs.com
Message-ID: <20010321065829.25350.00000092@ng-cj1.news.cs.com>
Source record: 37943

Hi-

I've been using (registered) APE 95/98 quite a bit lately, and have a question about images. Images are evidently "locked" or "unlocked" when they are created. Once locked, I can't find a method to unlock it within APE, even if copied. At the right side of the main drive status screen, there is an icon that shows an open padlock (green) or a closed padlock (red). Clicking the padlock does *not* change its status. Just to the left of the padlock there is a blank button. Nothing seems to affect that button. There is a swap button to the right that does work to swap images/mirrors.

In APE for Dos, there was a "W" command that was a soft write-protect. I can't find anything similar in APE 95/98. It would seem that there should be some method to unlock an image probably by toggling it, maybe with a pop-up dialogue box. Perhaps I'm just missing something. Anyone?

Thanks,
Larry

hi all,

i have a question about atari drives.

i now have 2 1050 drives that both seem to work fine, but my question is this, how can i tell if they have been modified in one way or another with a upgrade of some sort???

i mean i doubt that they have any sort of firmware or hardware upgrade, but it would be a rather nice score if they do....

thanks
bo

hi all,

okay well my wife and i have quite a bit of storage available to us for our web pages (we have about 1 gigs left) due to some work that i do for my isp. anyway i would be willing to put up some sort of an ftp site but i don't have any of the atari stuff to acutally put on it.

let me know if any of you are interested and i will set it up and then we can get access to it again.

thanks
bo

This is what I thought odd, you had spent so much time intergrating and
sorting all the software to the point of marking 'no fast lo' on it.

I spent a while trying to get it to go and gave up.

Since then I got the Goodatari' series of dumps and the exe works great.

I am sure I could arrange a cd :-)

Let me know by mail if so..

If you can get a hold of MyDOS or Sparta DOS you can try things like
formating a double density disk. I think every 1050 upgrade was double
density, it was only the older 810s that were upgraded for copy protection
removal that remained single density.

1978. Lynx problems...

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-22 01:34:31 UTC
From: Kyle Lavery <klavery@home.com>
Message-ID: <HEcu6.31386$5P1.388865@news1.rdc1.ab.home.com>
Source record: 37751

I didn't know where else to post this, I figured someone on one of the 3 Atari newsgroups I read would have an answer to my problem!
I just got my hands on a Lynx 2 system (it came in a whole lot of Atari things I bought today). The system looks to be in very nice shape, was complete with its box/manual (even had the registration card still!)
The person who I got everything from told me the Lynx didn't work, he had no clue what was wrong with it. I tried a fresh pair of batteries, and it didn't work for me either. I was wondering if anyone would have an idea what could be wrong, or is there anywhere I can send it to be repaired (or would that just be to costly, and should I just get a whole new one?) A dumb question: do you have to have a game in the unit for it to turn on? I don't have any Lynx games here, and I've never used one so I figured id ask =)

Thanks in advance!

** http://www.phillyclassic.com **

** UPDATE: 03.21.2001 **

Joe Zbiciak has informed us that he is going to debute his 4-Tris Intellivision game at PhillyClassic, and what better way to introduce it than with a special PhillyClassic edition! 4-Tris is a GREAT Tetris game, with quite addicitive music. The details about the release can be found at www.primenet.com/~im14u2c/intv/4-tris-SE/

In addition to 4-Tris, Qb, and Wave 49, there will be a 4th special PhillyClassic edition game! Brian Prescott will be releasing a special version of his new Atari 2600 game, Crazy Valet, at PhillyClassic 2001! This version will feature more levels and a special PhillyClassic label! Be sure to download the demo of this game at home.tampabay.rr.com/bprescot/crazyvalet/index.htm

It is now confirmed that EVERYONE who attends PhillyClassic 2001 WILL be walking away with a free item! Funspot has donated a TON of great mercandise for us to give away! Visit their site at www.funspotnh.com Thanks to Gary Vincent at Funspot for their support!

Mike Gedeon of Video Game Connections has donated a TON of great items for us to give away as tournament and door prizes! Buku thanks go out to Mike! www.videogameconnection.com

** UPDATE: 03.05.2001 **

Deadline approaching! We are only able to offer the cool personalized Intellivision cartridge tickets to people who pre-order by March 9, 2001. If you order after that date, or buy tickets at the door, you will receive a non-personalized laminated paper ticket. Hope to see many of you at the show!

The new Atari 2600 game, Qb, will be making its cartridge form debute at PhillyClassic! Information can be found at www.phillyclassic.com/Qb.html with links to the official Qb page and the ROM image. We'd like to thank Andrew Davie for offering us this special opportunity!

Also, the classic based PC game Wave 49 will also have a special edition release for PhillyClassic. More information can be found at www.phillyclassic.com/soapbox.txt

** UPDATE: 02.26.2001 **

Even though we are officially SOLD OUT of table space, we still want to encourage as many people as possible to bring items for sale and trade. Towards that end, the PhillyClassic staff is pleased to announce The PhillyClassic Trading Post. The Trading Post will be available throughout the show for attendees to bring in items from their vehicles or hotel rooms once a deal is under negotiation, to inspect the goods, lay things out, etc. These tables are NOT to be used for displaying items to the public, but simply for buyer-to-seller inspections and transfers. Once a deal has been closed or declined, the table must be cleared. In this way, everyone will have a chance to sell and trade their goodies, even if they missed the chance for a permanent display table. We wish everyone happy hunting at PhillyClassic 2001.

Hozer Video Games has graciously donated *5* Atari 2600 Thrust carts and Good Deal Games has also donated a copy each of their new Sega CD games, Bug Blasters and Star Strike. Thanks to Hozer and Good Deal Games!

In addition to their donated games, Hozer and Good Deal Games have sent us carts to sell at PhillyClassic. Good Deal Games is offering a special $29.99 price for their Sega CD games, a $5 show discount plus NO SHIPPING! And Hozer will be sending a nice assortment of homebrew 2600 games for us to demo and sell at PhillyClassic!

** UPDATE: 02.04.2001 **

Tables are now * SOLD OUT *. Thanks to everyone who purchased one. Just because you can't get a table doesn't mean you shouldn't come! Be sure to attend and check out all sorts of cool classic games!

The t-shirts are almost done and are going to go to the printer soon! We think they look really cool!

The tournament list has been added to the PhillyClassic website! Games range from the 2600 up to the Playstation 2! Each tournament will be accompanied by a great prize package thanks to all our sponsors!!

** UPDATE: 01.31.2001 **

Table spaces are becoming EXTREMELY limited so if you're planning on attending and are debating getting a table, MAKE YOUR DECISION SOON! :)

Randy Femrite is going to bring down all sorts of neat Jaguar items to show off like a Jaguar Rotary Controller, Battlesphere, Skyhammer, and a XE/Jag controller interface!

** UPDATE: 01.22.2001 **

Hasbro has sent us a lot of games to be given away at the convention! Thanks Hasbro!

Michael Roberts has donated a TON of Star Wars handheld games
for us to give away at PhillyClassic. Thanks Michael!!

** UPDATE: 01.10.2001 **

Digital Press has graciously donated MANY Digital Press 6 guides
to be given away at PhillyClassic! Thanks Joe and everyone else
at DIGITAL PRESS!

We rented another 1000sq ft room for the convention, bringing the
total up to 3000 square feet!!

More and more sponsors are contacting us EVERY DAY meaning
more chances for everyone to leave PhillyClassic 2001
with a GREAT prize!

Classic Gaming Expo and PhillyClassic have teamed up to bring
you the best gaming experience you can get on the east coast!

John Hardie and Sean Kelly are graciously donating items for us
to give away at the convention. When you hear the names Hardie and
Kelly, you know they've gotta be good!

Ticket prices are currently $6 in advance, and $7.50 at the door.
Tables to setup your goodies on are $10 per table. Tickets will be
on preorder until March 30th, 2001. Just remember, we're a
non-profit event, every cent we make on PhillyClassic goes right
back into the convention!

This year's tickets are pretty nifty! Marc has made Intellivision
carts into our tickets that hang from you neck! Really neat!

** UPDATE: 12.23.2000 **

Sponsors are pouring in, which means more chances for everyone to
walk away from the convention with a great FREE item!!

T-shirts will soon be available for pre-order. These spiffy shirts
feature the PhillyClassic logo and some classic game logos! Be sure
to put an order in as soon as they're available!

Randy Crihfield of Hozer Video Games has donated some new
Atari 2600 games to be given away! Thanks Randy!

Jeff Folejewski will be bringing MANY (as in more than 5) full-size
coin-op arcade games! All games will be set on free-play and a
tournament will be held on his Joust machine!

Good Deal Games has also chosen to donate some of their new Sega
CD games to be given away at PhillyClassic! Thanks Good Deal
Games!!

** UPDATE: 10.30.2000 **

Van Burnham, editor of Wired magazine and author of Supercade
(www.supercade.com) has confirmed she will be attending

PhillyClassic! She's a great video game buff and a wonderful
person to talk to!

Be sure to bring all your spare games and systems, we will be
holding another auction this year! Last year people who auctioned
items off made a LOT of money, and it's a good way to part out
some of the extra items you don't need!

** UPDATE: 10.15.2000 **

Chad Schell of Schell's Electronics has donated an Intellicart
to be given away as a prize at PhillyClassic!! Thanks Chad!

Tickets for PhillyClassic are now on sale!! The price for admission
is $6 for both days, and $10 per table you wish to use to setup on.
Just remember, any money taken in from the attendees is not used
as profit for any of the organizers; it's used to pay for everything
used to setup the event. In case of any spill over money it will be
used towards next years event!!

If you have any items in particular you're wanting to pick up or to
part with, be sure to e-mail Jeff Folejewski and let him know so he
can add your list to our PhillyClassic webpage!

** INITIAL POST: 9.26.2000 **

David Newman, Chuck Whitby, Marc Pallante, and Jeff Folejewski
are proud to present PhillyClassic 2001!! The first
PhillyClassic was such a success we had no choice but to do it again!
This year's event promises to be nothing but BIGGER and BETTER!

Website is now up and LIVE, complete with:
* Information/scheduled events
* Hotel accomodation info/online reservations
* Driving directions and interactive maps
* Ticket information
* How To Link to Us banners/ads available for
YOUR classic game related site!

The weekend of April 20th and 21st will be one to remember as classic
gamers unite for a weekend of hardcore gaming!

Planned events include casual trading/selling, *tournaments*,
auction, show-and-tell, a guest speaker or two, and a
general good time by all!

We have rented a 2000! sq ft conference room at the Sheraton
Suites for the event, which means enough room for a lot of
people to come and setup the pride and joy of their collections,
and even a little tradebait!

The tentative times are as follows:

Friday: 5pm - ?? -- First Day, Setup, Meet and Greet, Informal
Trading and Game Playing
Saturday: 9am - 5:00pm -- MAIN DAY

If you have any questions about the event, PLEASE e-mail:
David Newman (davidnewman@adelphia.net)
Chuck Whitby (intv-sama@worldnet.att.net)
Jeff Folejewski (adventurevision@yahoo.com)
Marc Pallante (marc@classicgamer.net)

If you plan on attending, please
purchase your tickets early and make those hotel reservations!

Thank you very much!

Yes, you do have to have a working game in the unit for it to turn on.
At least that's how my early model works.
Hugh

hi all,

is there any home made subsitutes for the sio cables?? so far i have 2 1050 drives and a couple more drives on the way but i still only have one sio cable, and i need to make a sio2pc cable but i really don't feel like waiting for best or one of the other atari vendors to ship one out to me, i just wanna go down to radioshack and buy some adapters and cable and whip up a sio2pc cable.

does anyone have any ideas on what would be a good subsitute for one??

thanks
bo

As long as we're on the topic of Donkey Kong names, is it true that the "damsel in distress" is named Wilhomina? A guy I knew swore that was her name, but I never saw it written anywhere!

> APE'98 has a pure Win32 user interface, and a VxD driver as its
> core. APE'98 does not contain any DOS or console-mode applications, nor
> does it interact 'directly' with serial hardware like a DOS application
> does.

Hi Steve,
a few years ago when I was beta testing Ape98 we discussed this topic in a few emails. I was wondering if you were planning to do a port to the WDM model...

here's what you wrote in June of '99:
"... APE is using the ring 0 vcomm interface for a lot of its functions, and even making some direct port access to bypass some obscenely slow vcomm functions.
I dont think the vcomm interface, or port access is possible with the WDM driver model, but I suppose I could get a book and actually check it out :)
"

so did you change the code in the vxd to use the Win32 serial communications api or do you still access the port directly? If you are using Win32, how do you check for the ring?

-Dan

The trick will be finding the D13 connectors; after that just make sure the
pins attach to the proper wires.

Hi,

Yes, you can use FMTDIR, HDINIT for this. It's also possible to low-level
format but don't do that if not neccesary because it takes a long time and
sometimes fails and then you have to reformat it on the MAC or PC...

That's what I've done, and it works great. You can have the PC plugged into the DB9 and all your SIO devices on the SIO chain at the same time...just make sure you have only one of each drive on the chain at a time. There's plenty of room inside your 8-bit for this mod.

Mike

kenames@pacbell.net writes:
> sounds more like a bad power supply to me. get a known good one and
> try again.

Thanks Ken, that's it (I suppose). I got the 600XL to work with
another power supply. Unfortunately, the other machines still
refuse operation. Maybe there is a difference between a 600XL
and 800XL/800XE/130XE? I am talking about the German versions.

The power supply that fits to the 600XL has part no. CO61763-34
(5V/7.5VA/24W). My 130XE manual says that one needs 5V/1A. Maybe
that's the reason why the 130XE refuses to work with that brick?

However, my computer storage is kinda mess today, so it's not
easy for me to look for other power supplies.

If it is of any interest: The bad brick was part no. CO61763-11
(5V/7.5VA/22W).

Greets from Germany

Source record: 37769

I just pulled my old Atari 80 out of a closet it has been in for about 15 years. I hooked up the floppy drive and tried to boot a few old games on 5.25. when I turn the Atari on (with the floppy drive on and disk in) I get a boot error message. I can't find my Atari basic cartridge is that the prob? I found an old note that said to hold start down when turning on the Atari, but that just make a beep come from it and nothing happens.

Thanks,
Brad

Hmmm ? Have you tried using a drive head cleaner ? I am not sure if the
Indus has a speed setting potmeter, but if it does, does it run at the right
speed ?

> compiler.

Ehem, no. (-; The TB compiler generates real assembler code (please
check the code if you don't believe me!) It still requires a run-time
library for all the basic support functions (i.e. PRINT, SOUND, XIO, the
math routines etc. are within).

So long,
Thomas

e-mail: atari@benjamin.net

Lately I've added more Atari inventory so checkout my Catalogs. Even my 8 Bit Atari Software grew by 25%! And I'm offering a 20% Discount to my regular customers! E-Mail for Details on Redeeming this offer! I'd like to say Thank You for letting Bravo Sierra Computers Support you & your Atari Needs. And if you have'nt bought from Bravo, Give Ben a Chance! I can be quite Beneficial. And remember, if you can't come see me today? Come see me tomorrow! E-Mail or call Ben anytime at (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. My customers love the speedy service! I also have lots of Atari Reference Books. Which I can Mail by Book Rate!

I've switched ISP's! Try www.pacifier.com/~atari or atari@pacifier.com and as always www.atari.benjamin.net and atari@benjamin.net still work but are being redirected to my new ISP and since I've moved, I have revamped and updated my WebSite and all my WebPages. So Check it out and, If you don't come see me today, come see me Tomorrow!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari 64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net while you Download Free Catalogs directly from my site. If you can't get my Catalogs that way, Feel free to Request catalogs by E-Mail. Really, it's not an inconvenience. I ask that you specify Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your full Mailing address so I can figure Shipping & Handling. I'll be back after the weekend. Bye!

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or atari@pacifier.com instead of NewsGroups as I am swamped and I find it hard to keep up with reading the NewsGroups.

I update my catalogs once a week. Just before this message is posted. So when you see a new posting, check my Catalogs. After I post this message. I'm off for the weekend. But I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or atari@pacifier.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Bravo Sierra Computers has Moved! To a New ISP! Now Hosted on pacifier.com!!! Atari 8 Bit, ST and Jaguar Hardware/Accessories, Software/Games & References/ Books. FREE Catalogs on the web at http://www.pacifier.com/~atari or at Ben's SubDomain at http://www.atari.benjamin.net Catalogs Requested by and Received Through E-Mail at atari@pacifier.com or atari@benjamin.net and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Ahh, i think i like that idea.

that would be really cool, a built in sio2pc 9 pin port on the back or side
of the atari. not a bad idea, just wire it parallel to the existing sio
port on the motherboard.

the only issue in that case would be a way of daisy chaining devices to that
port while connected the pc is connected to the sio port in the 800xl.

i wonder if that would cause any problems though such as port noise or
anything...

What make and model drive? Only some of the very early SCSI drives (mostly the early Seagate drives) could be low-level formatted to the 256-byte sectors required for the MIO. If the Apple you mention is Mac, that one uses 1024-byte sectors. PC format is 512.

If you had a Black Box interface (Bob Puff/CSS) you could use the newer drives with almost no problem, as it can internally handle 512-byte sectors.

The START button is only when you are booting from a cassette drive (410
or 1010).
The boot error sounds like one or more of 4 things:

1) the head on the drive is dirty
2) the head on the drive is out of alignment
3) the disks have gone bad
4) the drive ID switches on the back are set wrong

I would lean more towards reason 3, as the disks do have a "shelf life"
as far as the recorded data is concerned. I have lost several games
just from the disks sitting on the shelf and I didn't have backups.

2005. a pacman clone question

hi all,

i can't remember for the life of me what this game that i used to have was called. it was a pac man clone and i beleive it came out before jawbreaker, atari pacman, etc.

it was a cassette game that i bought when i was i think 13. it did come in the ol' tyme plastic baggie packaging. the only things i think i remember clearly about it were that when it finished loading, it would scroll up from the bottom of the screen and when it was done scrolling up, you then could play the game.

i would love to play that game again (it was the first peice of software that i actually bought with my own money, i don't count basic since my parents bought it for me)

thanks
bo

DON'T do it.

It can only be done with DOS 3, which, fortunately, is not widely available
and has tremendous compatibility problems. What's more, the data will not
last long. The magnetic medium used on those disks expects a stronger
signal than our drives can produce.

Sorry I haven't emailed that off yet. I just moved all of my computers to another room in my house and I'm getting all of my wires plugged in right now. It's quite a project. I hate moving. But, I should get APE running soon and be able to send it off this weekend.

Here's a question: Must you have a hard drive for you ST in order for 800XLDJ to work? I assume so. Also, is the cable that you use the same as the SIO2PC cable that's used to hook up an 8-bit to a PC?

-Tom

2009. Re: Atari 800

It is not the absence of a Basic cart (which most games do not use) causing the boot error; it would go to the DUP menu if DOS were present without a cart.

Basic games would boot DOS and report a "press only one key error" if the cart were absent.

The Start key is for cassette boots; the buzz is a signal to press play on the 410/1010 and then Return on the 800.

It sure sounds like disk rot or drive malfunction if the connections are all good.

Since the sio2pc is wired directly to the internal SIO, the Atari doesn't know the difference. It sees the pc and any other devices attached to the external SIO chain.

If it does cause noise, it's not enough to cause problems. I've been using this setup several years now without problems.

You will still need some normal SIO cables for the drives and other Atari peripherals which have the 13 pin connector.

i understand that, it is just that i only have one sio cable at this point,a
and i was looking for an alternative to cutting it and making it into an
sio2pc cable, that is why the internal sio2pc connector idea is so
appealing, plus it would just look more professinoal.

i am just lazy and don't feel like ordering more sio cables from one of the
vendors.. LOL

There are some versions of the SIO2PC cable that cause more noise than others.
IIRC, the two chip version was better? Any comments here would be appreciated,
since this seems to be something I read once. Otherwise, I have no
understanding of the electronics involved.

Try going to your local Goodwill or other thrift store that sells
used stuff... They usually have a few baggies full of the double-
density floppies that will work with the Atari 800. For example,
old Commodore 64 floppies will work fine.

It could be Ghosthunter. I do believe Ghosthunter scrolled up at the intro, while playing the Twilight Zone theme. Ghosthunter was an egregious Pacman clone, more so than Jawbreaker. Ghosthunter had excellent playvalue and I think it had a simultaneous 2-player option.

Anyone recall a BASIC type-in version of Pacman which was published in Antic, around issues 5 to 13?

That is a good idea unless like me you have more than one Atari.
It is possible to cut your SIO cable and put a 25 pin plug on both ends
and also a 25 pin plug on the little black box you build your SIO2PC
into and then you have the best of both worlds.
Personally I cut the cable of an old Xetec Printerface to make my SIO2PC
cable.

In article <U7tu6.84$4N3.3496@ord-read.news.verio.net>,
mike@atariguy.com says...
> That's what I've done, and it works great. You can have the PC plugged into

Are the disks that cause the boot error message actual boot disks?
Sounds like the disks are not boot disks. Try a DOS disk and then get
a dir of the disks that fail. If a DOS disk can not boot then it may
be a hardware problem.

If you say so... I'll check it.
OTOH, the MMG does sorta "attach" a runtime module to the program, so it
becomes a standalone. It would be interesting, then, if there could be a way
to do something similar with TurboBASIC...

Hi,

If the computer has been opened for an upgrade or repair, then the problem lays in the metal-shielding. There is a 'short' been made by the metal-shielding, maybe at the pbi. because there is a small seperate shielding that sometimes moves.
Secondly the RAM and ROM can be damaged, I got an XEGS overhere where both the OS and RAM's where broken that had the same result.

Maybe there are several other hardware problems that result in an RED screen...

Gtx,
TXG

> that's the reason why the 130XE refuses to work with that brick?

Well, 5V/1A = 5V/5VA, and 7.5VA > 5VA, so your problem is not there...
Current ratings on a power supply can be higher than what the computer
requires (unless the power supply has a minimum current rating, which
'bircks' usually don't).

Where was this article on the Seattle PI. I couldn't find it online.

If they did do it, I wish they would just go back to doing "real" news. Top 10's are the second stupidest lists in the world, Top 10 worst's being the stupidest. At least w/ top 10's there is a positive feeling on them. Telling everyone that something is the worst is just insulting, especially since the item is something from our past. I had an Atari at home, an Apple at school, and a friend w/ a C64. All were good in there own way. Do I need a list, probably created from someone's opinion or a financial report, to tell me I made the wrong computer purchase? I had fun w/ my system and met alot of people, so screw that guy and his list.

Message-ID: <tbq8tv9v6h5986@news.supernews.com>
Source record: 37807

Howdy

Anyone here tried assembling the EPROM programmer in Antic magazine Vol.4 No.8?

http://www.atarimagazines.com/v4n8/EPROMBurner.html

I want to try that project and I have a few questions about it. Most of the parts listed still match radio shack part no's but some specs are slightly off...like part #271-1313 is listed in the article as 240 OHM resistor, but the current RS catalog list it as 220 OHM. Does this make a difference or is it still compatible?

I know enough to put together kits, but not enough to deal with some specs like the difference between 240 and 220 ohm parts and if they will prevent it from working :-)

Thanks in advance.

Fernando

Hmmm. Same goes for the ABC (rather, its interpreter library is attached). As
for TurboBasic: Yes, I'd say so, with some hacking, sure. IIRC, the output of
the compiler was not packed into a binary-load file, though, even though it does
contain machine language. It required the run-time library to load it from disk.

So long,
Thomas

About 2 years ago I picked up a free Atari 800 right on this newsgroup. The guy letting it go was not an Atari fan but he had it laying around and posted a message on this board. I was nearby so I picked it up at his place and didn't even have to pay shipping. So this newsgroup does get some visitors from time to time from non-Atarians I guess. And unless you are a big fan of it, these computers are worthless. It doesn't hurt to ask.

> it from working :-)

I've never tried building this, but can suggest something WRT the resistance values. Generally resisters are only supplied with 10% tolerance. i.e. a 240ohm may be from 216ohm to 264 ohm. Also the designer has to choose the nearest appropriate value. So a slight difference (as in 240->220) is unlikely to cause a problem. If you really are worried you can always put two resisters in series (e.g. two low tolerance 120ohms)!

It is not. The null modem cable is just a means of data transfer; the signals are of a different voltage level and would not have the format of commands/responses which the 800 expects from intelligent serial devices like a disk drive.

>DCM01@USA.NET (Daniel Miller) remarked:

>I have an 800 with 850 inteface module. I would prefer to use a

That particular resister value is not that important, since there is a
potentiometer to adjust the output voltage. The output voltage depends on
the ratio of R2/(R1+R3) [more precisely, Vout = 1.25v * (1 + R2/(R1+R3))].

As far as I can see, none of the other resister or capacitor values are
critical. Something within 10% - 20% should work. As for the other parts,
I would tend to go by the descriptions, not the RS numbers, as long as
the descriptions look like they match the drawings.

Just make sure the electrolytic caps are rated for at least the voltage
specified in the parts list.

And be sure to check the output of the power supply before you connect
it to anything, or you may release the smoke from the other parts. ;)

Phil

Another thing you need to be careful about -
not all EPROM's take the same programming voltage.

A quick scan of one of my parts catalogs lists
most of the CMOS EPROMs as having a 12.5 volt
programming signal. Not sure whether this is
just a minimum or not, but I suspect 22 volts
will damage the part.

Hello Everybody,

I was looking at an old Atari 8-bit/Commodore 64
catalog, which listed in the Atari section a 5.25 inch
utility disk titled "The Arcade Machine".

It stated that "The Arcade Machine" assists in the
writing of game programs, by assembling a series
of templates into a working video game.

Does anyone have "The Arcade Machine" and
found a way to run of a fully working copy?

Wally

Hi,

Use powerarchiver 2001 it's freeware www.powerarchiver.com and it's like Winzip. It supports ZIP, RAR, CAB,LZH + (LHA), ACE, ARJ, JAR, ARC, ZOO, BH, TAR, GZIP + (TGZ), BZIP2, UUE and XXE files. It has an exelent archiver convertor in it. Just select all files you want to convert, can be different formats and convert them to zip.

Just play with it, I think it's a good usefull program. I use it alot because I download my software for Atari on pc. I had problems with the .ZOO archives on my Falcon030 but now I depack them on PC with powerarchiver and everything is ok, or I convert them to .ZIP which is easy to unpack of the Falcon030, on 8-bit I use UNLZH and SuperARC & UNARC 2.4

I made a scan of my 850 interface. Some of you might find it
ammusing. The one I have I ordered (I think, I might be off by one
year) late in 1979. They were not availiable yet, at the time, and this
is the one I got. The case is aluminum, instead of plastic. Otherwise,
it is the same inside, as far as I can tell. Of all the people I knew
that had Atari computers, I was the only one who had this case (I am
sure there are others, my Serial number is AN000418). But, I thought,
this might be a piece of Atari history that many of you may not have
seen.

Where that 240 ohm resistor is located, 220 will make almost no
difference. When I built this, one addition I made was to add a second
potentiometer in parallel to R3, and a switch to switch between the
two. I set one for the 22v called for in the article, and the other I
set for 12.5v, to handle the 27c64 chips. I also used the mod in the
following April issue to be able to read/write 17128 (16k) EPROMs in 2
8k chunks. It worked like a champ, and I was able to make backup ROMs
of all my drives, as well as the 3.5" XF551 mod.

ONE BAD SIDE TO THIS PROJECT!!!! It will NOT work on the XL/XE
computers! It ONLY works on the original 800. I tried for several
weeks to make it work with the 800XL, but even with all the schematics
at my fingertips I never figured it out.

Hi,

Well, I tried the standard stuff. Re-seating the chips. Leaving it on
all night. I changed every socketed chip (this one has all the chips in
sockets!) out with one from a working 800xl. The chips I took from the
malfunctioning 800xl all work in the the 'donor' machine (it works fine with
the chips from the malfunctioning unit).

Any other ideas? This was a really pristine used machine. It was clean
enough to eat off of. Still had the cover over the PBI connector, too.
Thanks for the input.

David

If it isn't the standard chips, you may be in some trouble. Did you swap out
the DRAMs too?

Only other thing I have had go wrong is the memory/PGA<PLD?> and I know they
do sell replacement delay chips.

Hi,

Yep, I switched the drams too. Bummer. I was hoping it wouldn't be too
big a deal.

I've got another 800xl that the copper traces on the PBI connector are
coming up. Matter of fact, one trace is broken off about a quarter of an
inch from the end. I bought it used as well. The PBI connector on this one
must have been plugged/unplugged into what ever a million times or more.
It's pretty fried. I was hoping to switch the upgrades from the messed up
PBI machine into the red screen machine. What's a good way to fix those
copper traces? Thanks.

2062. Converting programs to tapes

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-26 06:19:30 UTC
From: davide.guida@inwind.it
Message-ID: <008c01c0b5bc$e1a463a0$586699c2@dgs.it>

Hi everybody,
I like to transfer some Atari XE program, found on the net, to tapes so I can use with my original Atari XE... (similar to TAPER for Zx Spectrum or PRGWAV for Commodore 64).

Is there some software available?

Thanks in advance

You need a program, for example DOS 2.6f, which has a drive speed check and find the potmeter inside the GT, if it has one, I am not sure. 1050's have'em. And then find the right speed. I think 1050's are supposed to run at a bit over 300 in Europe and 275 or so in the US, someone please confirm the numbers as I haven't done this in a while.

hi all,

i just wanted to say how i HATE it when people sell their cartridge collections one by one on ebay rather than in sets of a few at a time. i don't feel like dealing with having to bid on say 8 different carts at a time or differnt times, i would MUCH rather bid on a collection of 8 carts (even if i already have 1 or 2 or even 3 of them) and get a whole mess of carts from one person and have to deal with only ONE ebay auction rather than 8 ebay auctions from the same dude.

on that same topic, how come people rarely sell their entire collections of atari on ebay at once rather than split up the whole collection?? i saw about 2 or 3 months ago a atari 800 and like 45 different carts and a ton of other software (i don't think there really was all that much hardware besides the main unit and a tape drive?) went for like 288 dollars or something like that. that was a cool auction to watch, (i wished i could have bid on that one, however 288 bux was wayyyyy over my limit, i was thinking of going as high as 100 bux on that auction then watched it fly up in price)

i know that probabaly a lot of you long time collectors of atari would say "no way to having to buy a whole collection of 8 carts just to get that one that i am missing" when you probably have 50 or more carts in your collection now (including 5 basic carts, 4 star raiders carts, and 3 missle command carts, and at least one miner 2049er cart, LOL). but to a new collector like me, it sure would be a nice way of expanding my collection in a fairly painless and quick fashion.

this is all just my humble opinion on that i think that the selling of collections as a whole sets is really cool and that i don't like seeing them split up. :-) (btw there is a awesome collection of atari hardware for sale now, it looks like he has one of every atari made up to the 1040st boxed and each one is complete. it is at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1224524927 , i would love to bid on it, but it is way over my limit of affordiblitiy)

thanks,
bo

2069. Weird 600xl fault

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-26 13:57:13 UTC
From: Nigel Henry <nigel.henry@virgin.net>
Message-ID: <uZKv6.32121$Q4.5604562@news2-win.server.ntlworld.com>
Source record: 37600

Hi all, I recently got a 600xl, seems to work great apart from one thing- I'm having no luck getting cassette games which require basic disabled to load. At first I thought that the option key was faulty, but the keybord test shows it's working fine.

The problem manifests itself when loading the cassette- after the first loader I will get the message "remove cartridge", like I had forgotton to hold down option.

Any ideas?

It's really strange, because apart from this the computer works great, ROM cartridges and BASIC programs all work fine. I've tried the cassettes on my 800xl and XEGS, and they work fine on those. Problem with POKEY maybe??

I'm really not good at board level repair. I would probably do something
like solder a 50 pin edge card connector to what is left since I pretty much
hang stuff directly to it anyway.

2071. Re: Converting programs to tapes

Which type format are the files? Basic files using CLOAD or LOAD"C: are easy;
.EXE or .COM files are more difficult converting to boot tapes. Audio type
sound files would seem to require the most involved conversion process.

Source record: 37597

well yes, it would be a pain to a certain point to have only one atari that can actually connect to the pc, however i really don't think there is a big requirement to have all of them having the ability to connect to the pc. the main reason why i want a sio cable is so that i can copy from my pc a bunch of images to one atari so i can make floppys and play them on my ataris. i only need one atari to do the transfer, then once the floppy is made, i can play with all my ataris.. :-)

also i am still thinking about this idea, what about taking an old atari modem apart (like one of those cool looking but kinda useless 1030's) and ripping out much of the motherboard and then somehow using the 2 ports that are on the 1030 (i assume there are 2 sio ports on it). maybe desolder the ports and then put some sort of a blank breadboard or pc board in place of it and place the 2 ports on it and wire them up that way.

what do you think of that idea??

thanks

Source record: 37602

Anybody know where I could get the adapter for the ICD MIO that goes to
the 130XE. It will work on my 800XL but need the adapter for my 130XE.
Thanks Mike.

That was a pretty spiffy device; I had never seen one in the A8 heyday.
Acquired one in a mixed box of Atari hardware recently and it apparently has
the atascii font built in; there are dip switches for configuration to about 20
specific printer models and a mode for output in the screen characters. It is
like a G: device for non-epson models with no special autorun boot required...

It should work fine and recycle some hardware; I considered doing the same with
a dead 1020 printer or build it into a nonfunctional MPP 1100 printer interface
since it has the port to continue the daisy chain...

I'm considering whether to buy an Atari Touch Tablet with or without the Atari Artist cartridge. Can anyone please tell me if there are other good or better graphic softwares for the 8bit that would work with it?

I was also wondering if the Koala Pad and the Atari Touch Tablet were somehow compatible with each other?

Thanks in advance for enlighting me.

Hello All,

I was wondering if anyone has a good file selector program for the 8-bit? I am putting together some Mega DI images for 800XLDJ. I want to make it easier for people to load in the included games. The one program I have does bring up the list on the disks, but does not successfully load in all the games. Some files it does load in. The one I have is version 0.4 by Bill Kendricks. I would like the raw files... Thanks to any who can help....

Edward S. Baiz Jr.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

I feel they sell in parts to make more money. If someone really
wanted a cart they may bid up to $10, but would the same preson bid
$80 for 8 carts? I know it would depend on the cart. I'm just giving
an example of why I think they sell in parts.

Russ Gilbert <russg@en.com> wrote:
: Somebody is working on a ppp conection.
: But, you don't need ppp for any of the things you mentioned, lynx,
: telnet, ftp, e-mail. What you need is a shell account with your ISP.
: Then you can do all those things without a ppp connection.
: Very hard to find (shell access).

If you're in California, I can't recommend Sonic.net enough.
They started as a local (Sonoma County) ISP, but very recently rolled out
dialups throughout the state.

They offer shell (telnet, SSH), web space (CGI, SSI, PHP, domains),
FTP space, and, for folks who like that kind of thing, web based tools.

Even before they rolled out the California dialup, I still signed up with
them even though I was moving out of range (about 100 miles east :)).

I _knew_ I wouldn't find a better ISP out here in the Sac area, and I was
right.

The few that do support shell access are either dying or restructuring.
It's pretty scarey. One day AOL and Earthlink will own the 'net. <shudder>

Howdy Vidar, folks

>CSS sells new Floppyboards, they did a new run last year...

I've got one. You can have up to 4 standard Floppy mechs connected to it. You can even exchange files between PC and Atari. Meaning all the neat stuff you find on the net (software written for the Atari and text) can be read from PC disk and written to you Atari system (either floppy or Harddrive).

BTW if your getting the BB, make sure it either has the Parity PAL or use a 74xx280 to create parity (SysOp Fox-1 can tell you exactly how) or order a parity PAL from CSS. http://www.nleaudio.com/css

I've got a ZIP drive and a CDROM connected to my BB. The CDROM software will only play audio CD's for now.

2102. Re: Converting programs to tapes

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-27 12:58:45 UTC
From: Russ Gilbert <russg@en.com>
Message-ID: <3ac0d398$0$11816$4c5ecdc7@news.erinet.com>
Source record: 37631

I did this some.
The one I remember using was a 'header' program. You copied
the header program to tape, then copied the disk file to tape.
The procedure probably only works with single stage loading disk files.
There's also a dsk2cas program I have in my archives.
You'd have to have a way to get the files to your real a8, as I don't think
APE or SIO2PC have cassette support. I mean you have to get 'header'
to the cassette somehow. I used a term program to copy the header
to tape. I guess you could use just the DOS copy function.
This goes way back. I remember putting a R: handler to tape so
a kid could use his tape drive and amodem 4.2 for telecomm.
I can't find this 'header' program on the net.
I bet Jindroush Kubec has something that will do disk to tape.
Russg
If you need 'header.cas', I can mail it to you.

Still around, mostly hacking around microcontrollers right now<Atmel
90S8515>. I am looking for something with a little more horsepower, but the
market has *seriously* changed.

The old days of people pushing their products is gone now. If you aren't
doing 1,000 units a month, they don't return your phone calls. There's some
really interesting stuff out there, Mitsubishi has a 32 bit RISC
processor/DSP with 2 megs of RAM on the chip that I would like to look at.
Can't even get a sales person on the phone. I think they must have caller
ID.<grin>

Really hits me hard since I get an urge to do something and it takes 6
months for me to get my hands on a part. By the time I get the part, I have
already mentally moved on. I just bought a compiler suite from
www.microcross.com for ~$150, but I can't seem to buy any of the 21 target
processors!

So now I have pretty much put my career as a chemist behind me, looks like
my electronics hobby is going by the wayside. I think I going to spend my
declining years raising ducks and chickens: Much less frustrating then the
current electronics market. Things may improve now that the slash dot and
mobile phone things have imploded. I am so burnt out by the experience of
trying to be an electronics hobbist during this time period that I don't
think I am ever going to enjoy it again. If Mitsubishi *gave* me 100
processors to play with I doubt if I could even stand to look at them.

Actually there are/were a number of programs that worked with the Atari
Touch tablet. It also works through BASIC BASIC XL/XE specifically since
I did some programming with these languages. I can't be 100% certain
about stock Atari BASIC, but would guess that it does just as well.

The only thing I didn't like was trying to account for vertical position
. Horizontal wasn't too big of a deal.

Subject: Re: Converting programs to tapes
Date: Tuesday, March 27, 2001 11:13 PM
Shoot. I keep messing up my response, this time I sent to r. hamilton.
I did a response to this that may have gotten 'lost'.
Like Ron says, BASIC files are no problem. Well, you have to
have APE or SIO2PC, as you have no disk drive. You could use
APE, load DOS, then copy the cassette file to your tape drive, I guess
APE supports a DOS copy to C:. Now I'm thinking, the copy to
tape will normally have the long interrecord gaps, and you don't want that.
I used a term program to copy to tape, for some reason it did short irgs.
Long irgs are a pain and I think I remember they don't work with
what I used.
I used a 'header.cas' program. You copy the header to the tape, then
copy the executable to the tape right behind it. I think it only works with
single stage disk load files, which a lot of games probably won't work,
because
many are multiple stage programs. In addition, you can't use a disk image
and put that to tape with the 'header', many games on the net are images
of boot disks.
I have this 'header.cas' and a program called 'dsk2cas.bas', I think.
Can send them to you if you want.
How about some detail about how you are going to write to your
tape drive? You download with a pc, then use APE or SIO2PC?

Uhm. I'm guessing you have a stock 600xl with 16k of memory.
It could just be that this cassette is having an error because there
is no RAM behind BASIC to load the cassette to. The program
may be loading, checking to see if RAM is available in the BASIC
$A000-$BFFF and of course there isn't any.
I don't think anything is wrong with your 600xl.

I seem to recall that the tablet would return values to the two paddle
registers, using the paddle triggers for the buttons. One of the tablets
had its horiz or vert reversed from the other (been too long; I can't
recall which was which).

So, from BASIC, reading PADDLE(0) and PADDLE(1) would give you relative X
and Y co-ordinates on the tablet (or Y and X); PTRIG(0) and PTRIG(1) would
give you the buttons.

The remainder is left as an exercise for the student...

The XF551 was the exception since it used a standard<low power> IBM type
mechanism. 300 RPM is right for a XF.

The www.atari-computer.de will not come back, it seems. The new
ABBUC-Homepage can be found at www.abbuc.de (finaly with its own URL).

The modems could talk to each other, but wouldn't you need something to
do the PPP comm? Plus, telnet and ftp all use TCP/IP, so you would need
some kind of TCP/IP software for the 8-bit, and then build telnet and
ftp software that uses the TCP/IP layer.

However, if you know of a unix box that you can dial into and log onto
directly (you would need an account set up on the unix box) then you
would be set, provided the unix machine also has internet connectivity.
Your Atari becomes a terminal, and you would be logged in running
whatever unix shell is set up for your account.

(yea, it's basically what Bill said below, but his reply sort-of made it
would like you could just dial up your ISP with an Atari terminal
program and that was all that was needed. To directly go through an
ISP, your atari would need PPP software, some type of TCP/IP software,
and then TCP/IP based utilities like FTP, telnet, etc. Don't even know
that these exist written for an Atari 8-bit...).

Thanks for the files. I make a DI image that has all of them on it. The
file selector programs work fine, but still do not load all the files
in. It may have to do with the DI image create by 800XLDJ or else the
fact that I think 800XLDJ needs to be upgraded. I have made a DI image
that has all 3 file selector programs that were on your disk. Between
all 3 of them, alot of programs can be loaded in easily. The "binary
load" option works on all of them, so that is the fall-back option.
Thanks again...

Well that's possible Russ, except that all the programs I tried were 16k and should really work on a 600xl. They were: Star Raiders, Centipede, Qix, Zenji, Keystone Kapers and Pengon. The only game which worked out of all of these was Pengon, and I figured it was because this was a "boot with basic" game.

It's doubly weird because I have the cartridge version of Star Raiders too and it works fine.

Thanks for your interest. Any other ideas?

Nigel

But the cartridge ROM would have been 8K or 16K that you will need in
addition
to the 8 or 16K RAM the cartridge may need.
Iif these are cartridge converted games they would need 48K if they load
in upper RAM where the cartridge ROM would normally reside.

Source record: 37655

Oh My.....How embarrassing for me! You guys are absolutely right. I thought of a way to test how much RAM these programs need. I have an 800 with 48K, and I know these programs work on it. So I took out two of the memory boards, just leaving 16K in there to see how she would react when I tried to load the games. Guess what, it reacted almost exactly like the 600xl, proving that the games need more than 16K. NEVER BELIEVE what's written on the cassette inlay- all these programs were on a compilation released by Atari in 1987, and it clearly states that they are compatible with the 600xl (does not state how much memory is required).

Thanks for your help Russ and Ken- I feel a lot better now I know there's nothing wrong with the computer!!

All the best...

Nigel

2132. Can't Escape Self Test Mode !!!!!!!! HELP !!!!!!!!!

Newsgroup: comp.sys.atari.8bit

From: mjl <mjl04133@iname.com>
Message-ID: <99uc1bcfr1@Masala.CC.UH.EDU>
Source record: 37656

Hello,

When I turn on my ATARI 800 XL computer, I receive the "READY" prompt which means that I am in ATARI BASIC.

However, I want to use DOS. At the "READY" prompt, I type in the word DOS and
the ATARI computer goes into self test mode without the use of a disk drive. Furthermore, when I connect a disk drive to the ATARI and then type in the word DOS
at the "READY", the computer still goes into self test mode.

No matter what I do, I still go into self test mode.

What do I have to do to get out of self test mode? All of the manuals that I have read
say that the DOS menu should automatically come up. What am I doing wrong?

Thank you so much in advance for your help.

Jenene

FamilyNet Newsgate

For those wondering where some of the Atari activity is tonight and Sundays, we have the online Atari chat every Thursday 8 pm Central Standard time at...

http://stargate.cs.swau.edu/atari

And we have a Europe chat session happening 4pm London time (10 am Central Standard time) every Sunday. If you are across the pond, we'd like to hear from you!

Also, if you'd like to sponsor a chat session, I know a place that could use some activity:

http://www.atariusers.com/aunt/

Just go there, click on the "main chat room" option on the left side of the screen and it goes to a auto refresh screen, or you can access...

http://www.atariusers.com/cgi-bin/chat/chatform.html

Just wanted to let a lot of you know that was out there. Take care and I hope to see some of you tonight.

When you power up the computer, DOS is loaded into ram. This only happens
though when the computer is connected to a disk drive which is selected as
"drive#1" using the switches in the back of the disk drive. Also, a DOS disk
has to be in the drive at power up.

Source record: 37661

Both of the buttons are connected to pin 6 of the controller port like a normal joystick. How the Proline differs is that rather than having the other contact on each button connected directly to ground (pin 8), the left button is connected to Pot input A (pin 9) and the right button is connected to Pot input B (pin 5). The two pot inputs are then connected to ground via resistors. The effect of all this is that pressing the right button raises the potential at pin 5, and pressing the left button raises the potential at pin 9. Pressing either button lowers the potential at pin 6, whiich is how a normal "fire" is detected. All the program has to do is check the state at pins 5 and 9 to determine which button was pressed.

It is very rare for a single loader to avoid memory conflicts with all of the varied applications, especially games because of the miscellaneous non standard RAM utilizations. But, if they are all compatible with DOS binary load, then it *should* be possible to locate a universal DOS type loader.

We mostly use 3 sector boot loaders executing from the cassette buffer that read the directory, but started out with a rainbow Autorun.sys which was configured with the filenames in its code. It took a keypress selection and poked the applicable filename into the DOS RAM area overwriting "D1:AUTORUN.SYS" and then jumped back into the DOS initialization code to load the selected app.

Could be:
Dirty head,
The head pressure pade is gone,
The drive belt is off,
or, the disk is not a boot type disk.

I do have a file loader I use a lot specifically written for Mydos by its author, that handles most files(some crazy files just lock up). It will list the first 8 locked files to load. They must be runable binary programs. I think it has or I added a poke that does a reboot when System Reset it pushed.

If interested, I can post it.

I know how you feel. I just found a diode for a project after looking for two
years! But, electronics and computers are my passion, so I won't give up.

My favorite suppliers are:
Mouser
Digikey
Jameco Electronics
All Elelctonics
Alltronics
Electronic Goldmine
Hosfelt
MPJA
JDR
Unicorn Electronics

Anybody else have suggestions?

What processors are you looking for?

> density 1.2 meg floppys and they have data on them.
>

You can't format reliably 1.2 meg floppies in regular Atari drives. You can only use up to double sided-double density rated disks. If you have a Black box or an ATR8000, you CAN format almost to 1.2 meg 5 1/4" floppies. Thats what I do. But they are only good for data/standard programs. Not commercial(99%).

Places to look for useable floppies:Really old computer stores, independants. Or those that cater to surplus/hobbiest. Some thrift stores will have bags or boxes of new or used disks. We have a Goodwill Computer center that has a bin of floppies with software. Yea some will not work, but they are cheap.

I know a few places will still likely to carry new disks such as B&C. I even have a few hundred left of DSDD(new and used), 1.2M(HD)(new), and 720K(new and used) for the ST. You can even check ebay, etc.

There is a newsgroup:alt.games.lynx.

Yes, you have to have a game cart before it will turn on.

I bought a dead LynxII, and it didn't work. I opened it up, to find that all three pins of the power connector had broken from the PCB. Soldered them back, and it has worked perfectly since. I took the oppourtunity to clean the LCD and inside window.

Other problems could be dirty battery contacts, dirty switchpad under the ON switch.

It could also just have a dead chip.

As mentioned by others, the power supply is my first guess as well.

If stored at very cold temps, and then broght it, plugged in, and turned on without letting everything get used to the higher temp first, can make things stop working-throw a fit(thermal shock). The brick that is now bad may just have a component with a cracked lead on the circuit board. Any other computer that doesn't work may also have chips that need reseating. Just one pin can keep it from working.

Unless Best Electronics or B&C has the connectors, the other sources have dried up. The choice is to buy more cables and have them around.

I have info on my experiences with setting up an A8 to ST connection(SIO2ST using 800XLDJ) at "http://people.delphi.com/rldetlefsen/atari/info/infomain.htm#apps". Look at the pages or download them as a local set.

I purposely set mine up with null modeming as a priority. Along with this I have info on system bypassing/switching using DB25 connectors. I call it "EASIO". Easy to build, but does require 1 or more SIO cables. But it lets me use switch boxes to switch between peripheral sets and the 800XLDJ.

> 800xl and XEGS, and they work fine on those. Problem with POKEY maybe??

Hold Option to disable internal Basic.

Hold Start to boot tapes.

If internal basic will not switch out, then the PIA chip could be bad(even just
that one bit). Its like leaving the Basic cart plugged into a 400 or 800.
Just the ram in the 16K area used by the cart may be enough.

Rick D.

PS. for the 4464 chips try Mouser, Digikey, and Jameco Electronics. Minimum
order charges apply.

Message-ID: <9a19e7$j42$1@Masala.CC.UH.EDU>
Source record: 37684

Hello,

How long should it take the computer to power up?
DOS seems to not be loading into RAM.

I am sure that the disk drive is drive#1 and am using the
Master diskette that came with the disk drive to boot up the
computer. I have tried the following on two different Atari
800 XL computers, along with a 810 disk drive, and then again
with a 1050 disk drive. I can't get rid of the annoying self test
screen when I type DOS.

1.) Traced the cables to make sure that the computer and
disk drives were properly connected and turned on the television
(computer screen).

2.) Turned on the disk drive and waited until the red light went off,
placed the bootable floppy diskette into the disk drive, and then
closed the door of the disk drive.

3.) Turned on the computer console and received the "READY" prompt.

4.) At "READY" prompt, typed DOS and, oh no, the annoying self test mode
screen reappears. I know that it is something that I am doing wrong because
I never see the DOS menu which is supposed to appear on the screen when
the computer is connected to a disk drive.

Thank you again so much in advance for your help. Any help is deeply
appreciated.

Jenene

Source record: 37685

Howdy! Let me explain what I'm trying to do here and maybe someone will have a suggestion. I'm running an atari 800 with the 850 interface. I have an intex-talker speech synth. that runs off the rs232. The speech box works extremely well with any terminal program because it looks like a modem to the computer, running at 300 baud which can be changed all the way up to 9600 baud. What I want to do is setup my computer so that it will send output to both the display and the rs232 simultaneously or very close at least. The idea is to run old text adventures and have the speech box read the text as it is displayed. I know this is possible on my old TRS-80, the DOS even has a dual command to initialize it. I've never tried it on the atari and I'm thinking that I'll probably have to write some kind of autorun.sys file for the dos disk. I don't know. Thanks Mo

2163. Need some help with Atari disks please!

OK - I'm looking for advice on Atari disk formats.

I've so far managed to get .EXE files from inside downloaded .ATR files onto Atari disks and they successfully run using the [L]oad option on Atari Dos.

However I would like to transfer them onto Multiboot disks if possible since almost everything I have is on Multiboot.

Is there a way of turning a single .EXE file on a normal Atari disk into a bootable disk (perhaps something similar to autoexec.bat on a PC) so that multiboot can pull it in and add it to its menu?

Thanks team!

I think this has been covered before but the short answer is no. Hi-density disks use a magnetic coating that has a much faster equalisation time (a bit like chrome tape against ferric) and as such use a weaker signal than normal. The heads on your Atari are too 'loud' and distort the data. The results are very unreliable and marginal although it does work occasionally.

Oh, well.
that's sorta dumb (using APE cable to do tape stuff). If he had
a APE cable, he'd have the disk drive.
What he wants is to be able to write games to tape just using the pc.
Like make a wav file out of the game and then out from the pc to
a tape recorder. I think.

I'm not sure this will work.
The first byte on a boot tape is not used.
The second byte is the # of 128 byte records to load.
The third and fourth bytes are the address to load at.
The fifth and sixth bytes are init address.
So, probably, if you look at bytes 3 and 4, you'll see that they load
above $4000 (16384), which will be just like having the BASIC
cartridge in, no RAM there. Since the program is saying 'remove
the cartridge', you know it is trying to access the cart area ($A000-$BFFF).

This might work to see the load address and how many records to load:

```
10 CLOSE #1
20 OPEN #1,4,128,"C:"
30 GET #1,X
40 GET #1,X
50 ? "RECORDS TO LOAD = ";X
60 GET #1,X
70 GET #1,Y
80 LADR=X + (256*Y)
90 ? "ADDRESS TO LOAD AT = ";LADR
100 GET #1,X
110 GET #1,Y
120 INITADR=X + (256*Y)
130 ? "INIT ADR = ";INITADR
140 CLOSE #1
```

This may not work, it has been some time since I did tape stuff.
The tape has 128 byte records, with long or short interrecord gaps.
I'm not sure you can just get a couple bytes, you may have to get
the first 128 byte record, then read the info from that.

Nigel has figured it out.
But, I forgot. Most commercial tapes are multi-stage boot tapes,
they load in the first section, then init to load some more sections.
So, my program won't tell you about following sections to load.
You could write a BASIC program to trace the entire load process,
but anyway, you figured it out.

Should normally be 15 to 20 seconds for DOS to load and initialize and continue
to the READY prompt. The drive busy light would indicate activity and a lot of
beep-beep... should be heard on the monitor audio.

The test mode indicates DOS did not load and lack of a 'boot error' message
points to one of a few possibilities:
1) drive not powered up when XL boots, (pretty much eliminated)
2) drive not connected to SIO, (bad or loose cable?)
3) drive not D1: (check both black and white switches to the left looking at
switches on rear of drive; 810 has diagram)
4) drives are dead, not responding electronically to strobe poll from XL,
5) XL is not seeking or not recognizing drive presence.

The hardware is all in place so the software is all that is needed; it would be a snap to include in 'open' programs when you have access to alter the code. It is pretty much just (for Basic):
OPEN #1,8,0,"R:" to initialize
...
PRINT #0;OUT$ (screen editor)
PRINT #1;OUT$ (speech)

It becomes more difficult for commercial applications; especially so with copy protection. It could require sophisticated code to hide itself, patch into interrupts, watch for screen code and grab it for speech; might necessitate a translator configuration which then boots the adventure.

>3.) Turned on the computer console and received the "READY" prompt.

Between "Turned on the computer console" and "received the "READY" prompt",
there should be about 30 seconds or so of disk drive spinning while DOS.SYS is
loaded into lower ram.
Next, (and this is maybe where a problem is) when you type DOS and press
RETURN, another program called DUP.SYS is supposed to load and then bring up
the DOS menu. If that file isn't available on the disk in drive#1, you'll get
the self test instead.

Doesn't it also mean that the XL was booted without the BASIC cartridge present/disabled? If the XL is a model that has a built-in BASIC cartridge, maybe something happened to unseat some of the ROMs inside the computer? (I think the 1200XL did NOT come with BASIC built in, but the 800XL did. I forget about the others, it's been such a long time since I've seen them physically.)

Source record: 37699

The quick and easy way is to rename your .EXE file to AUTORUN.SYS and make certain DOS.SYS is on the same disk; it will then autostart when the disk is booted but might leave a lot of space unused.

There are also 5-12 sector DOS loader programs that you can name to AUTORUN.SYS; these will boot and either give you a fixed list of apps to run or read the directory and throw up a menu list for your selection. Most of these look for files which have the Locked = Protected attribute set or an extender like .EXE in the name and skip any others. The DOS and the ARS files together use almost 50 sectors on the disk.

The other option is a 3-7 sector boot loader which resides in the area normally reserved to boot the DOS and can read directories and load the raw sector data without DOS. These are good for games and apps which conflict with DOS RAM and overwrite and damage it but not practical for those like Visicalc or TextPro because you cannot save and load data files with no DOS. Boot loaders can free up that 50 sector DOS space on a disk and load quicker.

I can send you a copy of my BOOTMAKR in a day or so...

From: Manuel Polik <cybergoth@nexgo.de>
Message-ID: <3AC4D4E0.74F77636@nexgo.de>
Source record: 37703

Hi there!

The Epyx Shrine (http://home.nexgo.de/cybergoth) now features an additional page for Jumpman Junior.

Featured amongst other things are:

- Animated GIFs of some of the ending sequences
- A complete level by level strategy guide to solve all 12 levels

--- The normally featured interviews are delayed this time, I'm expecting to add two interviews about Jumpman Junior within the next four weeks, one with Randy Glover (Atari & C64) and one with Chris Capener (Coleco).

Hope you like what you see at the moment despite this little delay :-)

Apart from that, I'm searching some friendly guy with both a scanner and an Epyx catalogue from 1985. Can someone provide complete+readable scans of such a treasured item?

Greetings,
Manuel

Yeah that's what I thought, I guess for commercial programs I would actually have to use a disassembler, patch the program, and then recompile it. Unless (this is probably just fantasy) I could make a special homebrew cartridge that would route my outputs at boot time. Thanks again, Mo

I might have one hidden and buried somewhere in my "walk-in-closet", but i'm looking at one right now from 1982, at least thats the copyright on it. I'll add it to my homepage sometime this week and you can just lift whatever you want off of it. I'll be sure to make a post, I also have the original packaging and manual for Jumpan and others. I'll probably add those as well.

Your disk isn't booting.
Make sure your disk drive is turned on and a boot disk (with DOS on it
if you want DOS), inserted before you turn the computer on.
Make sure your drive is set as drive D1: also, (there are switches in a
hole
in the back of a 1050, I think both should be toward the left as you
look inside). Other drives also have switches to set the drive number.
When you turn the computer on, the disk drive should start going. After
DOS loads, then you get that nasty raspberry (fart) sound and READY
comes up. Then you can type DOS and get the DUP.SYS menu, or
D1: prompt if SpartaDOS.

Looking at 'The hackerbook for your atari computer' a book by H.C. Wagner
1983, ELCOMP Publishing, the easiest way to do this is to write in assembly
language a bootable tape generator program which converts your program into
a bootable tape. You then use any generic tape to disk program to create a
bootable disk. it seems like a lot of trouble but after reading the code all
you would need is an assembler and a blank tape. When I get time I'll scan
some of this book and add it to my homepage.

There's also Netscalibur (Direct Connection) at www.dircon.net but
they'll charge you about that much for it too, if not more.

Source record: 37719

Unfortunatly I still have all the Indus Diagonistic disks and factory manual. If you can not get them fixed anywhere I can, now that I have lots of spare time fix the Indus Disk Drives. But before you do anything else, take the cover off (assume you already have), ok look at the two rails the head tracks on, if dirty clean them! If not clean them anyway you are in there so do something. Now gently lift the Head Pressure level, check to see there actualy is some pad left, while you are looking take a flashlight and check the head itself. If you see crud on it then clean it with Isopropyl alchohol, (No this will not rust the head!) Then try the disk again. You have to keep in mind that the Indus tracking system is more complicated than the old Atari 800 or 1050, it tracks for errors each step.

Hopefully this will fix your problem, if not then you have a last resort ME?

Yep, that is it. Much better picture than my scan. One thing I noted on
the index page was the 1090XL expansion box. I actually have part of one. I
found it in a surplus store, bought it for a couple of bucks. The only thing
it lacks is the cover (I have the chassis and mother board).

They are a snap to build and the instructions are on Darek's page:

http://www.emulators.com/

It is just one plug connected to an SIO cable with wires and only one resistor.

CAUTION!! If your PC is newer (faster) than a Pentium-I 75-100MHz, Darek advises it will probably NOT function since it is writing out of the PC printer port and timing is somewhat critical on the Atari SIO bus.

How much stuff is involved? If you are not comfortable making the $7 cable, you might just want to mail the diskettes to someone to do the transfer and email you the files.

If what you really want is affordable access to the 'net and a way to upload/download files to your Atari, you might want to look into getting an old i386/486 box and installing Linux on it. Then you get a shell account without having to pay, plus all of the apps that you would ever want - ftp client, ftp server, telnet, a web server, web browser, ...

If you're really good at scrounging, you could put together a system for almost nothing. Minimum requirements: about 8 Mb RAM, floppy drive, serial console (e.g. your Atari).

You could transfer files between the Linux box and your Atari using just about any of the standard BBS tools (like Kermit). And you could still play with PPP tools for your Atari, but now you don't need to be connected to an ISP to do it, and you can see what's happening at both ends of the connection!

Please accept my apologies if I've offended anyone by pushing Linux on this newsgroup.

Sincerely,
Phil

2208. Could Someone Send Me A Copy of DOS 2.0 and/or DOS 2.5?

Newsgroup: comp.sys.atari.8bit
Date: 2001-03-31 18:00:56 UTC
From: mjl <mjl04133@iname.com>
Message-ID: <9a852h$f8$1@Masala.CC.UH.EDU>
Source record: 37742

Hello,

Could someone send me a copy of DOS 2.0 and/or DOS 2.5 for my
ATARI 800 XL? Are there any web sites where they can be downloaded
from?

Thank you for answering my email.

mjl

Actually that's not too bad of an idea, I wass thinking you could set up a 'home server' by using a box like you said with apache webserver. By running a null modem cable from atari to the box and the box dialed up to your ISP as it's main connection, you could actually surf the web with the atari using lynx and pine for email.

Message-ID: <3ac6909a$0$11815$4c5ecdc7@news.erinet.com>
Source record: 37737

Into Eagles nest is probably available from vendors (just did a quick check)
B&C has the cart for 9.95 (but $20 minimum order). Video 61 has
the cart for $19.95.
You can check the vendor list kept by M. Current in the Welcome to csa8
post.
I found the game too difficult.
Video 61: http://www.atarisales.com
B&C: http://www.myatari.com
Ben Smith (Bravo Sierra) didn't seem to have it.

My trusty and longlived 800XL suddenly cratered; how do I isolate Pokey problems from real keyboard malfunction?

It totally fails the Keyboard self test, but passes the memory and audoi/video. Only the Option, Select, Start and Reset respond; but not Help.

It boots into Basic and behaves like the Return key is stuck; the cursor scrolls off the bottom of the screen accompanied by the key clicks.

It boots into SpartaX, reads autoexec.bat and starts the new time input and freezes there.

Typing DOS at the BASIC prompt when no disk operating system is
present is the same as typing BYE to enter self-test mode (since the
computer thinks that, since you typed DOS, you obviously want DOS, but
as none is present something must be wrong). You need to have the
floppy connected to the SIO chain (and naturally have the drive select
switch properly configured) and have a bootable disk inserted in the
drive (preferably a DOS disk) for it to work.

>placed the bootable floppy diskette into the disk drive, and then
>closed the door of the disk drive.
>
>3.) Turned on the computer console and received the "READY" prompt.

Did you hear the familiar beeping of DOS loading when the computer was
turned on? This is indicative of DOS (or the bootable disk in
general) being loaded. Depending on what DOS you've booted up, and
what drive/addonds (i.e. US doublers) you're using, it could take
10-15 seconds to load, or as few as 5.

>4.) At "READY" prompt, typed DOS and, oh no, the annoying self test mode
>screen reappears. I know that it is something that I am doing wrong because
>I never see the DOS menu which is supposed to appear on the screen when
>the computer is connected to a disk drive.

As I said before, self-test comes up if no DOS is present in RAM (i.e.
no bootable disk or disk drive was found)

>
>Thank you again so much in advance for your help. Any help is deeply
>appreciated.
>
>Jenene
>

If no beeping is heard when you turn the computer on (i.e. no DOS is loaded) and you're certain the drive is on, set to drive 1, and contains a bootable disk, then the problem may lie in the SIO cable, your SIO port, or the drive itself (be it the SIO port on the drive, or the drive's electronics). If possible, try connecting another drive, preferably one you know to be working. If it still fails then the problem is somewhere between the computer and the SIO cable inclusive. If it works, then you know it's the drive. If both are working, and the disk is at fault, then you'd be hearing rapid beeping and the words "BOOT ERROR" repeating on your screen, or you'd hear something trying (but failing) to load.

Only the 400/800, and 1200XL came without an internal BASIC.
Oxydization is a possibility either in the system itself or, more
likely, in the drive. In that case, re-seating the chips would do the
trick.

Stick with the oldie but goodie 360k 5 1/4's. They work good, and you dont have to worry about wether the drive has enough ummpf to write to the disk properly. You can still find the older types of 5 1/4's at Fry's electronics, Staples and Office Depot

Source record: 37552

Right. That's why I said "If what you really want...".
I'm not sure what Tony really wants.

Having an Atari 8-bit doing TC/IP over PPP would be
a lot of work, but a great accomplishment. Having
the bragging rights would be nice too.

One of my points was that having a second machine,
with a known good TCP/IP stack and tools, and a
working implementation of PPP, would be a big help
in developing the Atari PPP app.

It would be cheaper than going through an ISP, and
you'd be able to see what is going on at both ends
of the PPP link.

And you wouldn't have to worry about the ISP shutting
down your account when they see funny stuff going out
on your connection.

Anyway, if Tony (or anyone else) is interested, I
can give them more info via email, so this thread
doesn't drag on any longer.

Best regards,

Phil

I downloaded all the versions. I got the German version 4.5 to work,
but I cannot get the others at the moment. I had to extract the files
from the XLD images and make DI images in order to get them to work
with my XE - SIO2ST(PC) cable - Hades setup using 800XLDJ. If there are
any special instructions in getting things to work, please me know...

Hello all.

The Mega DI images are done. There are 22 of them and together they
hold about 800+ 8-bit games. These images can be used with an Atari
8-bit XL or XE computer (did not try it out on my 400) connected to a
16-bit or great Atari computer using the SIO2ST(PC) cable. I will be
uploading them to Aaron Wheeler who will put them on the site below:

http://homepages.paradise.net.nz/atari/The whole process should take a couple of weeks. I
just hope you all
enjoy them.

Some time ago, I purchased a couple of Instant TV adapters (ITV) when Tiger Direct was closing them out. ITV is essentially a JAM!! composite to VGA convertor with a TV tuner and remote control added. I remember seeing two posts saying that the Atari picture was really bad using the ITV. I finally got around to hooking one up today to my 130XE and PC. On my S-Video setup, at least, the picture is just as good as the JAM!! -- which is superb. And it is arguably better, because you can adjust the brightness, contrast, and saturation using the remote control. I was hoping to be able to display both the PC and the Atari simultaneously (so I could see both the APE 95/98 screen and the Atari screens at the same time) using the included software, but no luck, it's still an either/or proposition.

Hi,

Is an ITV also S-video to VGA? I thought JAM was a video to VGA convertor...
And how much does it cost? Is there a web-site where I can read the specs?

Thomas,
There are two books (the first is probably what you need more) that
ever Atari 8-bit user should own. 1) Your Atari Computer- A Guide to the
400/800 Personal Computer (XL Version) By Lon Poole. 2) Mapping the
Atari by Ian Chadwick. These are BASIC programmers bibles and extremely
good reference books. There are others, but these should be in your
library!

2239. simple machine code program wanted

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-02 23:32:07 UTC
From: Gary Morton <gary@alma.demon.co.uk>
Message-ID: <3AC90C33.C7BC4318@alma.demon.co.uk>
Source record: 37563

I am playing around with the SIO, using an oscilloscope to look at the signals. I would like a simple short machine code program which can repeatedly read the same sector (any) into the same buffer then loop around if a key is not pressed (one of the function keys would be OK). I need this to repeatedly trigger the scope to get a good display.

I have a good idea that I have to setup the locations around $300, but then I am unsure as to which vector to call. I think I need to use SIOV ($E459), but I have seen some programs which use DSKINV ($E453).

I intend to type the code into BUG65 then run the code, pressing an appropriate key to stop.

I've had a search on the Internet and through some old Analog magazines, but I haven't resolved this problem.

Can anyone help?

thanks...

Look for ANALOG #12 and the Snail utility - it ran an RPM check by reading certain sectors. The code should be adaptable to your needs.

2249. Adding a reset switch to a 130XE

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-03 09:44:03 UTC
From: Gary Morton <gary@alma.demon.co.uk>
Message-ID: <3AC99B91.D223F0DB@alma.demon.co.uk>
Source record: 37571

I have never really liked reseting the Atari by power cycling. I modified my old Atari 800 by using the TV channel select switch and wiring it into the reset circuitry (bear in mind this is a long long time ago). The only problem is that the switch isn't spring loaded and I often forget which state it is in!

My Atari 130XE seems to need a long off time before powering up again, therefore I want to make a similar modification. I want to add a push to make spring loaded switch. It is well out of warrently ;-). Can anyone tell me what the reset circuitry is like on this version of the Atari? Is anyone aware of any sites which give this information or perhaps show a picture of the circuit board with the various blocks highlighted. If necessary I will trace back from the 6502 pin, but it's best to ask first and hopefully save some time.

thanks...

The following little machine-code Program should do, what you
want.(ATMAS II -mnemonic) It has not implemented a check for a
key-press, but any error should terminate the program.
Use for BUFR any memory-location, you want to.
So hitting the break-key will work also .

2251. Still no joy with bootable disks - help!!!

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-03 11:02:10 UTC
From: dunxuk@aol.com
Message-ID: <20010403070210.20410.00000168@ng-fz1.aol.com>
Source record: 37573

Ok - I'm still having no joy with making bootable disks.

By downloading .ATR files from the internet and extracting the
.EXE files I can create a disk full of .EXE files that the
Atari can read.

By using the [L]oad option from MyDos I can then run these
programs and they work faultlessly.

However, every single loader I have found on the internet
refuses to work including;

FL.EXE
PICADOS
HSINIT.EXE and HSMENU.EXE
BOOTMAKR.BAS
NEWBOOT.BAS

Also renaming the .EXE file to AUTORUN.SYS and leaving DOS in
is a /bad/ idea.

Most loaders don't work with DD disks, but transferring them
to ED or SD makes no difference whatsover.

They all crash at some point. About half crash before attempting
to load the .EXE file, the other half won't run the program
once it has been loaded.

Are there any loaders out there that actually work with files
like these or did the author(s) of MyDos know something that
knobody else ever picked up on?

Thanks again team!

Dunx.

(Incidentally I would be happy to email an example .EXE file to
anyone willing to give this a try...)

BOSS-X is the version, you need for MyDOS-Subdirectorys. BOSS-X is running
in Turbo-BASIC, but in MyDOS it's possible to run EXE/COM-Files from BASIC
or Turbo-BASIC.
Can you work with .ATR-Files? Or do you need .XFD? Most programs can handle
both formats (ATRINTER, ATARI-Disk-Managerment, Xformer, A800Win...), but
some cannot (XLDJ).
If you need .XFD, I can create a xfd-file with BOSS-X.

hi there,

okay i have downloaded all the images, and i downloaded the dos frontend for the emulator and everything works great (finally was able to play for the first time in about 19/20 years the game ghosthunter, which was the first game i acutally ever bought for a computer when i was 13). i am able to play all the games and see which ones are worthy of collecting and which ones are not, but my question is this:

is there a way of me loading those games up on my ataris themselves without using an emulator (such as with a sio cable)? i assume that is probbably not too difficult, but my biggest question is this, is there a way of me splitting up the megaimages so i can say put digdug onto a floppy and play that game byitself? so that way i would not need to use an sio cable?

thanks,
bo

Source record: 37579

I took my Atari 8-bit out of storage yesterday and hooked it up again. The 800XL works fine but I'm having a problem with the 1050 drive. The drive was working fine a few months ago, but now won't boot from any disk I put in. I took the cover off and cleaned the head. Any suggestions as to what might be wrong?

Here are some symtoms I noticed:

* power comes on fine and disks spin fine in drive

* after first turning the power on and spinning for a second, there is a rattle sound

* There is a spring on the carriage that moves the head back and forth...how is this supposed to be connected?

Any ideas and/or suggestions would be most welcome. Thanks.

2255. Re: Adding a reset switch to a 130XE

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-03 13:35:22 UTC
From: Glenn Bruner <brunergs@pcisys.net>
Message-ID: <3AC9D19A.6EB0C04D@pcisys.net>
Source record: 37576

Gary,

Why are you trying to add another RESET switch? The RESET switch on the 130XE is
wired to a 555 timer circuit that provides a switch debounce function. The output of the 555
timer is connected to the RESET signal line that goes to SALLY (CPU), ANTIC, PIA, and
Freddie.

I think what you probably want to do is put the COLD START modification in that Bob Woolley
made some years ago. This is a push button activated mod that force a cold start reset (like power
cycling the computer) when you press RESET.

Just setting the RESET line to an active low state is not enough to force a RESET of the computer.
You have to get around the RESET vector/warm start routine in the operating system.

Hm, maybe the easiest would be adding a switch which would negate TRIG3.
It would fool the computer in thinking there was cartridge
inserted/removed. After RESET, the computer will coldboot.

The carriage wire should be tight and wrapped around a capstan right beside it,
rather like the dial wire on a radio. When then positioning capstan is turned
the head *must* move in and out of the drive.

Dunx,
Have you tried the Sparta Menu? When I find it I'll e-mail that one to

you. I have another one I can e-mail to you. It works fine with AtariDOS 2.0 and 2.5. It's very small too.

Yes & yes; with the SIO2?? cable you are booting the A8 with the ?? as D1:. If you boot with MyDOS or other large capacity FMS you can easily transfer files from the image file to a real disk and set it up with a loader.

2265. IRC Chat Tonight (Tuesday) on Advanced Graphics Modes

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-03 22:20:12 UTC
From: DCM01@USA.NET
Message-ID: <3aca49e9.8349395@news.CIS.DFN.DE>
Source record: 37586

This announces an IRC chat tonight for Atari 8bit enthusiasts. For tonight Tuesday April 3rd, 2000, 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Advanced 8bit Graphic Modes." The plan is to learn about the merits and disadvantages of the higher resolution modes that were developed late on the 8bits. We'll also address Raphael Espino's current work on A8jdpeg, the Atari 8bit jpeg viewer. I will have a new disk image of 5 HIP pictures with HIP viewer to DCC to anyone who would like to try it.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

2266. FA: NewsRoom Desktop Publishing for Atari 8bit, and Lords of Conquest

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-03 22:28:04 UTC
From: DCM01@USA.NET

hi everyone

i just got a atari portfolio computer

the screen dosnt seem to work on it so i pulled it apart and the ribbon cable between the lcd and mainboard is broken

im after someone that can replace this or has a portfolio that dosnt work that they wanna sell

its not like a ide cable its the little flat orange ribbon stuff

if i cant get a replacement i guess i will have to make a cable out of ide lead and have it always open

cheers

Actually I do not either XFD or ATR. I am using a program called
800XLDJ. It is to the Atari ST what APE is the PC world. I extraced the
files from the XFD image and then imported them into a DI image that
works with 800XLDJ. I got the German version of 4.5 and 8.1 to work
fine. I cannot get the English version to run. I keep getting a line
error. I am working on it. Oh, just how is a file loaded in. I am
trying to load some game files that can be loaded in using the "binary
load" command. Still, Boss-X is a nice program.

No the above address is incorrect. Here is the one I have:

http://homepages.paradise.net.nz/atari/

The DI images are not there yet. I uploaded 5 to Aaron last night. I
have not received a message from him saying he received them.

Yes, but you would still need the SIO2ST cable. You could then copy the
game file to an 8bit disk and use that way if you so wish. I am going
the oposite way. I want to put all my disks on a CD in DI image form.

> Glenn Bruner
> brunergs@pcisys.net

Glenn,

last night I took apart the 130XE. I indeed found a NE555 timer
circuit which generated a reset which goes to: the 6502; ANTIC; the
6520; and the connector at the back. The trigger comes from the keyboard
connector. This ties up with your description.

I am now puzzled. On the Atari 800/400 the same reset was generated
by a power on reset circuit. The "System Reset" key appears to connect
to the NMI pin. My hack of connecting a wire from the channel switch to
the power on circuit capacitor (to short it out) generated a cold reset
every time - just what I wanted.

Has something fundemental changed in the XE/XL series. If the "Reset"
key now generated a hard reset how does the system differentiate between
a cold and warm start?

I'll have a search for the modification you point out.

regards...

Yes, that wire is connected and the head moves as the capstan turns.
The spring is actually on top and in back of the carriage, centered.

Still no luck in getting the drive to work, though :(

What is a SIO2ST cable?? i am planning on building a SIO2PC cable (or interface within a spare 1027 printer that doesn't work) to hook this up to my pc. Do i need a atari st to split the mega images up? the reason why i am unsure about this is because when i unzip one of the mega images (btw thanks a ton!!!!!!), it is one huge atr file and i don't know how to actually split/extract a single game from one huge atr file that has 50 games in it for example.

is a atr file actually just a pc file that actually holds the filesystem and individual files from an atari imaged floppy (or hard disk) and when i get the sio2pc hooked up, i will acutally be able to break the file down with my atari and see what exactly is on it?

well i am inexpericed still in the world of atari to pc connections and don't quite understand how atr files work, maybe after i get my danged sio2pc cable built, i won't be such a weenie and ask so many annoying questions, LOL.

The english ver of BOSS-X is still not available, I have not much time to translate, but I will do this (or next) week. If you have downloaded the "old" english version and got it run under MyDOS, you have to remove the REM in the AUTORUN.BAS - File. If you don't, the RAM-Disk will not formatted. You also have to setup your MyDOS-RAM-Disk well. BOSS-X has no tool to do this, you have to do this in MyDOS-DUP-Menu.
Binary files (games) can be loaded from the Start-Menu - BUT ONLY if you run BOSS-X under MyDOS!

Mirko

With the drive cover off and a disk inserted, what happens to the head if
you repeatedly cycle the power?

2283. Re: Digicom "The Freezer"

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-04 17:11:14 UTC

Message-ID: <uvJy6.1375$%W5.170212@news6-win.server.ntlworld.com>
Source record: 37507

This is actually program used to make copies of games, but it used a very novel way to do it. As far as I can remember, it worked as follows:

First you load The Freezer. When it has loaded you get the message "press option to load disk or start to load cassette"

You would then insert your game disk into the drive and press option. The game would load as normal. When the game was loaded you would then insert a blank formatted disk into your drive.

Then you press the option and select keys together (I think) and the program would "freeze" and be written out to disk.

What this produced was a bootable version of the game on the disk. However, as far as I remember, the results were not very reliable and it normally resulted in the game locking up, or producing a copy which did not run.

I never actually owned this program, I only had a copy (is'nt that ironic!) so I don't have the instructions for it and I am only working from memory. I hope that helps anyway.

Hi, Gary;
SIOV at $E459 is the general SIO routine vector and requires complete info in the device control block at $300.

DSKINV at $E453 is the more restricted resident disk handler; it is limited to single or enhanced (128 byte sector) density diskettes and you can skip some of the entries in DCB. Still required are DUNIT, DCOMND, DBUFLO, DBUFHI, DAUX1 & DAUX2 before calling the routine.

>Gary Morton gary@alma.demon.co.uk asked:

>I have a good idea that I have to setup the locations around $300, but

There is a pirate program called BOOT2DOS, it allows you to convert boot sectors to files and vice vera, it even worked from dos2.0s - Robc menus, but it only works with single density or the first 720 sectors of an enhanced density disk.

I may still have this program however if i dont some of the long-term users should have this program!

The SIO2ST cable is the same thing as the SIO2PC cable. It is just that
in the Atari World SIO2ST sounds better. <g> You also need the program
800XLDJ which runs on the ST or any other Atari 16-bit or great
computer. The program uses DI images not ATR. You can do what I did.
Use a utility program to extract all the files from the ATR images and
then import them into a DI image and use it. I have all the raw files
extracted an saved to a Jaz cart and a CD for all 22 Mega ATR/DI
images. Need them?? I could zip them and email you some if you wish.
Email me and let me know.

No, you need a PC to work with ATR files. My wife's PC came in handy
here. I can run APE on my Hades and view the files, but I cannot
extract them. Guess we Atarian's need a better emulator.

>well i am inexpericed still in the world of atari to pc connections and

There is a program for the Atari and PC that will load in these ATR
files and bring up the game. Works best on a TT or Falcon since the
sound comes through DMA...

What is needed for the MIO to a MFM hard drive is an old Adaptec 4000, 4000a or a 5500? (5500) if my memory serves me correctly (?) the 5500 will take on 4 seperate drives off of one card. The others take on 2 drives each. There is also another card available to those that had the Supra Interface which is the Omti card.

Glenn,

I now suspect that the behaviour of "System Reset" changed between the old 800 series, where it appears to be connected to NMI, and the newer XL/XE series where it connects to hard/CPU reset. I assume that there is some magic value held in memory which if exists causes a warm boot and if not (e.g. after power-up) causes a cold boot. I wonder why Atari made this change?

I searched out the Bob Woolley mod and I have just got it working. Hint use the 74HC part specified and not the 74LS part like I did. The pull down for the LS part has to be much smaller (I used 270 ohms). My first circuit didn't work because the pull-down was too high value and didn't pull down the voltage low enough.

Anyway this now works as wanted. Even so its a bit of a pain to have to hold down Reset & Option & the new switch. Bring back the good old Atari 800!

thanks for the pointers...

Hi Everybody!

I have a simple question : are the following carts for the 400/800/XL/XE considered as rare carts ? Where could I find more info about them, such as screenshots, etc... ?

Deflector (XL/XE only)
Superman III
Tower Toppler (XL/XE only)
Pac Man Jr
Atari XE Demo Cartridge
Super Pac Man
Animated Puzzle

Thanks,

Emmanuel.

My memory may fail me (so what else is new), but in the 400/800, the RESET
was maskable when it wasn't supposed to be. Remember the program
"Paperweight" that was supposed to "destroy" the Ataris ala harikari? When I
ran the program, it was on an XL. I got a good laugh out of it, hit the RESET
key and went on.

I showed it to somebody on an 800 and the RESET didn't work when I went to
reset the computer. (which gave me another good laugh).

I don't know if you wrote the above or not, but I'd lke to toss in a comment.
Win98se treats the serial ports differently also. I used Telix on clones for
about 5 years. Its an early 90s DOS term program. It quit working when I went
to 98se.

(since NT is an entirely different OS than 9x, its not surprising that it
treats the serial ports differently). 8-)

All of the carts you've mentioned were never produced, prototypes exist.
Except for the XE Demo cartridge which was IMO available only in shops
for demonstration.

Why?

Good news is I am 99.9% sure it is the track zero sensor. Bad news is they
are a bit hard to find and expensive when you do find them.

I remember when one went out on me I balked at paying the ~$13 B&C wanted. I
ended up carefully taking the sensor case apart and found it was just a flat
rectangular LED in the plastic. I just sanded a regular IR LED from Radio
Shack to fit in the plastic and glued the case back together. Yes, I am that
cheap.<grin>

2309. Re: All I wanted was a nice Indus GT...

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-05 15:09:04 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3ACC8A90.1FDD97F1@mail.uni-mainz.de>
Source record: 37532

Yes Vidar,
I am absolutely sure. Atari 1050 drives have 288 RpM as standard,
whereas XF drives use a PC mechanic (Mitsumi or others) which drives at
300RpM (+-2). You know, in the Pc world 300 RpM were some kind of
standard before Atari introduced the 810 and 1050 (which both used 288
RpM). Later (1987-1991), when Atari wanted to produce a new 8Bit drive
Jiri Tandon systems (JTS !?!) was gone, so the 1050 was no more
affordable. thus they used a standard PC drive (Mitsumi must have been
cheap at this time) which spins at 300RpM. To be compatible with 1050
drives they raised the crystal clock from 8Mhz (standard for DD PC/ST
drives) to 8.33Mhz. You see Atari did not always use or support the
industrial standards...
-Andreas

P.S.: If your XF551 runs a little bit faster than 300RpM, do not worry.
But it should not be higher than 303RpM... (by the way 300 RpM is
standard for 3,5" DD and HD drives; 300RpM is standard for 5,25" DD
drives, 360 RpM is standard for 5,25" HD drives).

From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3ACC8E19.CF40B7FA@mail.uni-mainz.de>
Source record: 37534

Hello Edward,
speaking of the File selector programs again, this is what you should
know about:
1) Fileselector: written by Bill Kendrick. This one works under MyDOS,
i.e. it is a DOS-Fileloader... it can only load programs that work under
DOS (and there are quite a lot of ML programs that do not).
2) Gameloader: written by a polish guy (???) this one can be loaded from
MyDOS or any other DOS (or from a Gamedos!). It directly frees the
memory (kills the DOS, if one is there) and then loads the ML files. For
binary loading it uses Page 1 (0100-01FF), I guess... there are a lot
more ML files that work with this program...
3) Mypicodos: this is in fact a Gamedos. You load the create file from
DOS and it will create a short Gamedos-loader onto another disk (i.e.
the game disk). Since this is a gamedos it will load all ML files that
do not need a DOS (most game and demo programs). Unfortunately it only
supports higher densities from 360k to 16 megabyte. It does not support
90k/130k/180k (but the Fileselector and the Gamedos both do!). All
Fileloaders support MyDOS sudirectories; only the Fileselector can load
Basic files (all others can merely load ML files).

I hope this is enough info. -Andreas

Well,
first of all connect a disk drive to the computer. Next set the drive to
drive 1 (look at the switches at the back of the drive!), since the A8
will only boot from drive 1. Power on the drive, insert a good DOS disk
(i.e. one which is not defective) and finally power on the Atari. It
should now boot up the DOS (if there is no cart in the slot, START has
not been pressed and the standard OS is active). Otherwise, well I am
out of ideas... maybe the drive, the computer, the disk or hardware
parts (some drive or computer chips) are bad... -Andreas

Well,
in the worst case (since you are using an 810 drive) the disk is
medium/dual density and DOS sits somewhere at sectors 721-1040 (which an
810 drive cannot read/access)... Just a thought... -Andreas

2316. Re: Geisterschloss RARE 1992 light gun game Atari 800xl complete boxed! Look!

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-05 16:05:40 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3ACC97D4.3F1D31C5@mail.uni-mainz.de>
Source record: 37539

Well,
Geisterschloss once was a commercial KE-Soft title. But in 1996 I bought the rights to many KE titles and then released Geisterschloss as PD. A few other KE titles, like Tobot II, Atomit 2, Brundles editor, Turbo-DOS, Ashido are also PD.

All the rest (The Brundles, Techno Ninja, Oblitroid, Bomber jack, Bros., Cultivation, etc.) can be had from ABBUC or Pd-world Versand in Germany. None of the KE-Soft titles are rare - at least not here in Germany.
greetings, Andreas.

2317. Re: Rare carts ???

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-05 16:15:36 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3ACC9A28.DF1F6CD@mail.uni-mainz.de>
Source record: 37540

Well,
originally most of these carts never appeared on the market (except the XE Demo cart!), so they are Prototypes. But afaik Video 61, Best and B & C have copies of these games, so they can produce as many eprom-carts as they like. Thus, speaking of quantity/avaiability they are not rare, since the three companies can produce them without any limits. Speaking of the subject "I have seen this game or I have a copy/pirated version of it" they are rare, because there are not many (pirated) copies flying around of these games. But surely this will change soon... -Andreas

Source record: 37541

Hello.
While I'm here, doing assembler stuff. I'll mention I put the ASMED
stuff back on my website. It is a ASMED.COM file to run ASMED
from DOS (BASIC disabled of course).
If you don't own a ASMED cart, I suggest you buy one from B&C
or Video 61. I would guess it would be about $10.

I also put ATASCII/ASCII translators, for both the A8 and PC.
Mat Ratcliffs article is in ATASCII and the tutorial is in ASCII.
These are very simple programs, which I use all the time.
I don't think I check for an error, like giving the same source and
destination filename. You'd probably erase your source file if
you gave the same source and dest. names.

Somebody actually was looking for the ASMED stuff and I had taken
it down (Ron Hamilton, I think.)

I don't understand Mat Belitz's ATMAS (Atari Macro Assembler I guess.)
code very much.

My 810 cannot even read sectors 1-720 of an enhabced disk nor can the Percoms
or ATR8000 drives. DOS 2.0 can only write up thru 719 so thay designed the 2.5
format such that 2.0 will not see any files which occupy postions on the disk
past sector 719.

We need more help than that, Andreas; there is one new drive and one near new which were both certified functional. Also ionvolved are about 100 diskettes; some are 2.0 & 2.5 master disks, tested before shipment, that fail to boot on either of 2 800XL's when obeying connection and boot procedures from their 1050 drive manul..

Probabilities seem low that so much hardware or software could crash at the same time. I have them trying the resident disk handler to see if any sectors are readable and if DOS is present. We are waiting for the Murphy's law guy to come by with unsought advice and see the problem immediately...

NT does NOT allow direct access to any hardware, and also has a dislike for older apps. i.e. 16 bit or 8 bit. Any version of APE for NT/2000 will need to address the drivers not the port. 98SE and ME have some trouble with DOS apps for similar reasons. WINXP will see the demise of DOS altogether..

Mark

>Where could I find more info about them, such as screenshots, etc... ?
...Tower Toppler (XL/XE...<

I have an A8 Tower Toppler cart. I originally bought it on disk for the ST.
A very clever and difficult game, but the A8 version is done in Graphics 8, and
depends on artifacting for its "colors". Which also means that if you use a
VGA convertor, Gr.8 games are B&W.

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection. Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.
"Hi!" to Alex Martin, who has done the same for the land of Poland.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

Hallo,

Russ Gilbert schrieb:
>
> I don't understand Mat Belitz's ATMAS (Atari Macro Assembler I guess.)
> code very much.
>

I dont know what is your problem with the code ?
I guess the assembler pseudo-opcodes, as the program itselves is very
simple.

So I will put a little documentation here - maybe there is any document
dealing with different syntax of 6502 assemblers and the author wants to
add:

EQU should be the same, assigns a label to an adress/constant
EPZ the same, for zero-page only

ORG sets the target adress for assembling
DFB define byte, inserts one (or more) 8-byte constants in the code
DFW the same with 16-bit constants, in "Atari" byte order LSB/MSB
ASC inserts ATASCII constants

Definition of constants:
#123 decimal
#%10111010 binary
#$E4 hexadecimal
#'R ATASCI

the #-charakter must be removed for direkt memory definitions (DFB, DFW)

#LABEL:L LSB of the word
#LABEL:H MSB of the word

A label could be placed directly into the code - this would generate a
JSR intruction to that label:

Example

```
TEST LDA #10
STA $30
TEST
```

ist the same as

```
TEST LDA #10
STA $30
```

JSR TEST

I think, that should be enough to understand the little code fragments,
published with ATMAS II -syntax .

Bye,
Matt

Thanks for all the suggestions and code, but in the end the above
"lateral thinking" method was the one which I used. The RPM program
syncs the scope perfectly and I was able to finally gather the timing
information which I was after.

I now have a 8031 micro attached to the SIO which is finally reading the
5 header bytes of a command packet. Next I need to grab the data!

Source record: 37404

Ok, I get it, sorta (ATMAS code). You load up $30B down to
$300 with your parameters, then jsr siov.

DFW is LSB/MSB? But is stored as the reverse?

I mean you have last parameters, which are loaded first, as
DFW $0080
and
DFW $0001

If everything is going backwards, wouldn't that be putting $80 in
dbythi, instead of dbytlo?

I get it basically. ORG $ Don't know where that is ($600 usually).

And BUFR don't know where that is. seems like would load
at whereever BUFR is? DFW BUFR, is that like a label?

I haven't used ATMAS. It is a different syntax from ASMED. I have
Mac65, but never used it. I think Mac65 can use the same source
as ASMED and produce an .obj out of it.

Thanks,
Russg

2332. Atari810Win Beta announce!

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-06 19:21:21 UTC
From: Dan Vernon <danv@whoever.com>
Message-ID: <9al4mc$6ht$1@brokaw.wa.com>
Source record: 37405

Just wanted to let the interested atari fans to know that I have just posted this first beta release of Atari810Win available at the moment only for Windows NT 4.0 & 2000. The program is similar in functionality to the excellent SIO2PC program by Nick Kennedy, and requires the use of an SIO2PC cable to emulate an Atari 8-bit disk drive using disk images files on your NT box. Enjoy! Please let me know about any thanks, bugs, problems, or wish-lists you have. The source code is forthcoming and will be released soon under the GNU GPL license.

get it at:
http://www.bitsofthepast.com/atari

-Dan Vernon

P.S. I have made an attempt to make my site more Netscape-friendly (at least for version 4.77), please advise as to my success in this endeavor.

> POKE 5903,65
> POKE 5904,85
> POKE 5905,84
> POKE 5906,79
> POKE 5907,82
> POKE 5908,85

> This returns the DOS to normal, Automatically loading files named
> AUTORUN.SYS.

After reading the above in a manual, is it possible to override previously
made configurations to DOS with code in BASIC or assembly language
at the "READY" prompt without having access to the actual DOS files
such as autorun.sys and dup.sys? (DOS can not be accessed on
the disk drive on my computer.)

I recently purchased ATARI 800 XL and disk drives on EBAY.
I suspect that DOS menu coming up after boot annoyed the previous
owner so he changed the default settings to DOS, etc.

For example, the manual says that for AUTORUN.SYS (DOS 2.0 and 2.5),
If you don't want this program to automatically load when
you boot with the master disk, rename the file to RS232.

I would like the program to load automatically. How do you undo what has been done to the file? However since the change has been done, DOS will not automatically run so how can the behavior created by the change be returned to default behavior?

Thank you in advance for answering my post.

mjl.
Hard to understand what your problem is, at least for me.
It seems the DOS menu doesn't come up when you boot your disk.
And, I suspect, it is the only boot disk you have?
You have an 800xl, so you boot this disk with OPTION held
(disable BASIC) and you expect the menu but aren't getting it?
And you want the R: handler (RS232) to load at boot.
It is possilbe you have a modified DOS disk, I've never seen
all the POKEs you mention to make .RUN file autorun instead
of AUTORUN.SYS files. I do know you can set the number of
disk drive buffers with a POKE and change the number of drives
DOS will recognize.

You can access a disk, as long as DOS is loading, using BASIC.

For example you can see the files on the disk with:

```
10 CLOSE #1
20 DIM A$(100)
30 OPEN #1,6,0,"D1:"
40 INPUT #1,A$
50 ? A$,
60 GOTO 40
```

that should show you the files on the disk.

You can also rename and erase files on a disk using XIO commands
from BASIC.

If you look at the files on the disk, I suspect DUP.SYS just isn't there.

In that case you need to figure a way to get another DOS boot disk.

Regards,
Russg

Let me try a bit more.
You can boot your disk and get READY.
You then type DOS from BASIC and nothing happens? No menu loads?
What we normally call 'DOS' is the DiskUtilitiesPackage or DUP.SYS,
DUP.SYS loads when you type DOS from the BASIC READY prompt.
Actually the Disk Operating System (DOS.SYS) loads at boot time and
installs the disk drive handlers so you can do things with the "D:" device.
I don't know if your disk is loading DOS.SYS at boot or not.

>Is an ITV also S-video to VGA? I thought JAM was a video to VGA convertor...
And how much does it cost? Is there a web-site where I can read the specs? <

Regretably, AIMS Labs, the maker, is a casualty in the business world. You would have to look for these as "distress merchandise". IIRC, I paid $19.95 each for these. The JAM!! has inputs for Composite video and S-Video. The ITV has inputs for both those as well as a coax input for TV/Cable signals (no descrambling, of course). I'm going to hook up the TV portion, but mainly for (NFL) football next Fall, so when I hear a big play has happened, I can switch for a few minutes and see the replay. My post was mainly to balance the negative comments previously posted. Mine works great!

I just read this post on this newsgourp and wondered if anyone could
point me in the direction or help answer a similar question.

I have an almost brand new (sealed in the box) 800XL and just
recently it start this identical behavior (ie: booting and then
pretending to have the return key stuck). I have never heard of the
term "Pokey" but it seems to be the same problem this other fellow is
having.

I fix PCs and can solder and open machine but I have no idea what's
going on with an 800 XL. Is there some resource that will explain what
this problem is and how I can fix it or is my beloved new toy salvage?
Is this a common problem?

And I *Finally* got some cool disks and carts for it too, Damn!

Any help appreciated

please email legion@voicenet.com

Thanks!

If you try turning it on without a cartridge, and holding down the option key to disable basic, with no disk drives turned on it will do a self-test that may isolate your problem. I would be really inclined to believe that it's a keyboard problem, you may want to go ahead and open the keyboard and clean,wash,dry,blow it as best you can and see if that helps. Check the keyboard connector for oxidation as well.

The code is fairly portable. The OS specific stuff for the most part is in a serial port class. I use the Win32API to create threads and signal events and mutexes as well as talk to the serial port. This stuff would need to be rewritten for glibc. I'll take a look at it and let you know. I do have SUSE installed on a partition as well as Win2k... just don't get a chance to use it much.

So how does my site look now with your browser? Are the colors still off? Granted, the colors are a bit strange, but I was attempting an "OSS look-and-feel". It should look like OSS packaging. If it still looks dark gray or whatever, please let me know what version of netscape you have.

With PD software, its much easier to create a boot disk that loads the 850 handler and possibly a patch that intercepts the S: handler when its done with a line, to copy the data to the R: handler. With commercial stuff, this is much more difficult.

One way is to use a soft loaded OS such as BobWooleys Smart OS, where you can put the code you need into the os space, boot the commercial game with the rom OS, then switch to the smart OS with the R: handler and patch set up. As long as the commercial software uses S: or E: , it should work, but stuff written directly to screen ram won't.

Have you tried the MYDOS menu loader? It only does 8 ml progs per
disk/side, but I have used it, with only a few things that locked
up(overwrote DOS or the loader I suspect which is why all loaders will
have trouble with some programs).

"I do have a file loader I use a lot specifically written for Mydos by
its
author, that handles most files(some crazy files just lock up). It will

list the first 8 locked files to load. They must be runable binary
programs. I think it has or I added a poke that does a reboot when
System
Reset it pushed."

If interested, I can post it.

Keys not working and dead ram or power supplies are much more common problems.
You can start getting to know the Atari 8 bit by read the Welcome to atari FAQ
in this newsgroup. And keeping an eye out for references such as the 800

Reference manual, Mapping the atari and any other Computer book, &
Os/Technical/Hardware notes.

You will need some knowledge of exactly which version of which DOS is in use, (Atari 2.0, 2.5, 3.0, Sparta, MyDOS...) and what changes were made. The best, but not necessarily most convenient thing to do is start over by booting with a stock DOS and writing over the offending .SYS files.

I have no idea. Never tried it.
But to be clear, if I understand.
You have a hard drive with a MyDOS partition (you don't mean a
MyDOS boot disk on a MIO Ramdisk). You boot from the hd,
then can't access the MIO Ramdisks of the MIO.
I guess you've formated and copied your files to the MIO ramdisks you've
configured.
Since you're using MyDOS, you can't access Sparta formatted disks of
any kind, ramdisk or floppy.
There's info about how the MIO works in the docs you get with the MIO.
MyDOS is likely to be more compatible with the Black Box, as Bob Puff,
Charles Marslett sorta made things incompatible between the MIO and BB.

Sorry, was not precise enough:

DFW MSBLSB ($1234)

is stored as

ADR LSB($34)
ADR+1 MSB($12)

>
> If everything is going backwards, wouldn't that be putting $80 in
> dbythi, instead of dbytlo?
>
> I get it basically. ORG $ Don't know where that is ($600 usually).

I had not given any adress , you must fill it with an adress of your
choice.

F.E.
ORG $0600

>
> And BUFR don't know where that is. seems like would load
> at whereever BUFR is? DFW BUFR, is that like a label?

The same - you must set an adress to the BUFR label

BUFR EQU $0580 ...

>
> I haven't used ATMAS. It is a different syntax from ASMED. I have
> Mac65, but never used it. I think Mac65 can use the same source

2362. Cartridge Dumps?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-09 10:58:21 UTC
From: Manuel Polik <mpolik@neulandmm.de>
Message-ID: <3AD195CD.D595215F@neulandmm.de>
Source record: 37435

Hi there!

There's some thing that made me wonder: While researching about Epyx games, I've never seen cartridge dumps of Gateway To Apshai, Jumpman Jr. or Pitstop. In fact I've never seen _any_ dump of an Atari 8-Bit cartridge game.

Is there any special reason for that? Technical problems?

I think dumped cartridges would be way better than all these disk cracks floating around, or?

Greetings,
Manuel

Ron.
I should quote, but too lazy.
You can boot MyDOS, then enter the MIO menu with SELECT RESET.
So, things are working ok up to there.
You make your print spooler and RAMdisk picks, then exit with
RESET again.
Then I don't understand. You said 'go back to MyDOS to set
the Ramdisk number'. MIO ramdisks are different from ramdisks
that reside in A8 RAM, you can't use ramdisk utilities that are for
RAM disks in the computer.
If you try to access the MIO ramdisk in the MIO, without formatting
the MIO ramdisk, you will probably freeze up and cause an error.
I think you have to format the MIO ramdisk first, just using MyDOS.

After you get this figured out, you may want to try 'miosave' and 'mioget'.
These are binary load files that will save your mio config to a file
(MIO.CFG
I think) and so you can load your config without SELECT-RESET.
Also, if you change the print spooler config, the MIORAMDISK will
be erased, you have to format it using DOS afterward.

I think I'm right about this.

Source record: 37437

well i got a 800xl from a thrift store and when i bought it home, it didn't seem to work right at all. when i turned it on the keyboard just acted all strange and not correct, rather like your descriptions below. i would try typing and then it would start line feeding and it would give rather strange errors.

i opened the machine up totally. found out that all the chips that were on the motherboard suffered from chip creep. loosened the chips up some more, then reseated all of them.

the 800xl works like a charm now.

i also did that with rana dd floppy drive i bought off ebay. i bought 2 of them and in the ad, the seller stated that one of them didn't work, it spun but didn't read. took it apart. pulled the drive up and reseated all the chips under the drive and took out the toy car axle (like a hotwheels axle) out of it and then put it back together. works like a charm now. the other drive worked fine, but the floppy eject mech was not working. found out it was missing out of the drive. i found an old apple unidisk 2 5 1/4 floppy at home that wasn't being use for anything so i took it apart and was amazed to find out that basically they used the same mechanical frames, just totally different electornics. so i was able to salvage the floppy eject assy out of the apple drive and install it into the rana. now they both work just fine and dandy. what is a good lubricant though for lubing up floppy drives? silicone?

2366. Re: MIO w/MyDOS?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-09 13:25:29 UTC
From: Russ Gilbert <russg@en.com>
Message-ID: <3ad1ee65$0$18895$4c5ecdc7@news.erinet.com>
Source record: 37441

Some more.
The great thing about the MIO is booting from it, really fast.
So, you leave your MIO on all the time, after you have it set the
way you want it, with the files, etc. the way you want.
You should be able to (always MIO on first, before the computer,
you can blow the power supply or something if you turn on the
computer then the MIO.) .. be able to turn on the MIO,
boot MyDOS. Format D6: (if that's the default). write DOS files
to D6:. Then use a utility called 'bswap' to swap d6 and d1. Now
MIO is D1:. Configure your floppy to D2:. Now you can turn
off computer and boot from MIO. If you want print spooler,
you'd have to SELECT-RESET for that first, then exit, format the
mio ramdisk, write DOS files, copy what you want onto the ramdisk.
Since you have to start with your real floppy as D1:, you have to
initially set your mio ramdisk as D2: or higher.
I had a Sparta batch file that would initialize my MIO the way I wanted
it, and copy my files to the MIO, do the bswap and re-boot if I remember.
It was all automated. I had a BBS that would bring itself back up
after a power outage. That required the batch file to be on a real
floppy as d1: tho.

I remen�mber, that I've seen in the ABBUC-PD Lib a fast E: Handler, that replaces the ATARI-E: Handler, so that most PLOT, PRINT, DRAW functions are faster.

Does anyone know, what's the name is of that program? Does anyone know the author? (May I use it for my BOSS-X system, to make a faster GUI?)

Mirko

2368. Re: MIO w/MyDOS?

Newsgroup: comp.sys.atari.8bit

Source record: 37439

I have an ST-225 with no controller yet so I boot with a MyDOS floppy and enter the MIO configuration screen where you swap drives and set partitions for the print spooler and RAMdisk. The default for the RAM is 192K as D6: but going back to MyDOS to set the RAMdisk number will not allow access to it. MyDOS will usually produce a gibberish directory because the sectors do not contain data which it expects but instead freezes requiring a cold start as a warm start will not recover.

Maybe I will cold start the MIO as normally I have started with Sparta and just restarted the XL.

ps :Who has the plans for an XL cold start switch? Clarence's Redshift page has the 800 version but not XL.

pps: Who has a good buy on Adaptec SCSI controllers?

Functionality is (almost) same and I doubt anybody would notice. Also,
disk cracks could be used on real Atari, cartridge dumps won't work.

A program called Hyper E: but it only speeds up the E: handler, (editor), so
only graphics 0, NO draw function are accelerated.

It's the Hyper E: handler; some work was done by John Harris, based on sources by someone else.

The full archive includes a BIN file to merge with your OS ROM of choice to burn into an EPROM, along with instructions.

Hope this helps,

David P.

2376. IRC Chat Tuesday Night, Advanced GFX Modes

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-10 00:14:23 UTC
From: DCM01@USA.NET
Message-ID: <3ad24ff6.3330978@news.CIS.DFN.DE>
Source record: 37447

This announces an IRC chat for Atari 8bit enthusiasts on Tuesday April 10th, 2000, 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Advanced 8bit Graphic Modes." The plan is to learn about the merits and disadvantages of the higher resolution modes that were developed late on the 8bits. We'll also address Raphael Espino's current work on A8jdpeg, the Atari 8bit jpeg viewer. I will have a new disk image of 5 HIP pictures with HIP viewer to DCC to anyone who would like to try it.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

Billy Ko,

Atari 8bit series has never used encryption for the cartridges. Neither has
the 5200.

Some may use very elaborate forms of bank selecting and relocatable code
(SpartaDOS X).
But not encryption.

Well, technically, Atari did use a form of copy protection on their carts, in the form of the "destructive write," where the cart tried to write to a part of memory that should be occupied by read-only data. If the cart had been dumped (with the program 'cartdump', for example), then the write would have been successful, which would overwrite itself, making it unplayable.

It's not exactly encryption, but it was pretty effective for a while, at least until people figured out how to hack the cart dumps to avoid overwriting themselves. Years ago, I had uploaded the article that came with the Pirate's Treasure Chest to the UMich archive which detailed many of the copy-protection schemes used by software vendors of the time. It was a very interesting document, to say the least.

If you're interested in the Pirate's Treasure Chest, let me know. I think I still have an image of it floating around somewhere in .atr format.

Regards,
Steven

Sped up most calls to screen handler for everything from PUT to scrolling. I ran it with my old Atari BBS and terminal software and could actually get pretty good performance up to ~1200 baud in nothing but basic.

I thought it was someone like Bill Boderstien that wrote them, old ANALOG mag IIRC.
>
> Either way, what _was_ the issue with the Atari OS's E: handler, anyway?

To safe.<grin> Figure everytime you used them from basic anyway they had to make heavy use of the floating point routines since all numbers in Atari basic are floating point so you take a double hit.

If engineers had a chance to do it all over again, we would have things like interleaved access between ANTIC and the 6502 so no slowdown, ~256kx8 20 nsec static ram which would elimnate the need for refresh which would further speed up the system.

The processor itself would probably be one of the Rockwell DSP chips since they are derivitive of the 6502, so they would do calculations as fast as a math coprocessor.

No engineer in their right mind would do it of course.

I've had a lot of luck with Sparky Starks' Diskey Disk Editor. You probably
have an ATR of it in all of the archives you've downloaded, the manual for
it is on my homepage.

2386. Atari BASIC listing ?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-10 08:11:02 UTC
From: Gerhard Janka <gerhard.janka@siemens.at>
Message-ID: <3AD2C016.1559E809@siemens.at>
Source record: 37459

Hello,

Is there a, maybe even documented, listing of the Atari BASIC ROM
(any revision) somewhere to be downloaded ?

Thanks
Gerhard

Right.
Uhm. Bswap allows you to swap MIO drives from DOS. I don't
know that it works with MyDOS, as it is a command line thing and
I don't think you can pass parameters from the command line.
It is just much more convenient than SELECT-RESET.
There is also a MIO Menu program, that will bring up the MIO menu
from DOS. That I think you could use with MyDOS. It seems that
the doc said SpartaX didn't like SELECT-RESET was one reason for
the menu from DOS.
Right you can't save the configuration into the MIO itself. You either
have to have a hard drive, which saves the config, I think. Or use
mioinit/miosave programs, which put mio.cfg on whatever disk is
default when you run it.
Uhm. Did you get MyDOS to boot and access ok? On the MIO Ramdisk?

Self test had been the 1st step and it had passed memory and audio/video and failed all but the 4 function keys. Question was it is mechanical problem in the keyboard or electronic trouble in the TTL decoding or POKEY chip? I had opened unit and believed ribbon cable was OK with minimal discoloration.

Here is the status; loosened and reseated POKEY & TTL decoders with no change. Swapped out the POKEY w/ no change. Popped off a key top and found no access to internals. Saved ribbon cable to last as they are reportedly fragile; finally disconnected it and boot looks normal w/ 'Ready' but no access since no KB... Next step is removing the tiny little screws on the metal KB back; I sure hope all of the little springs do not fly across the room and that reassembly is successful.

The default spooler is 64K leving 192K as D6: RAM; they are both user alterable
in 32K chunks. You could also change RAM to D2: but apparently saving the
configuration requires a hard drive and D6: is conveniently out of the way of
D1-D4 plus the 64 & 192 size split is about right for most apps.

What does bswap offer that you cannot do in the SELECT-RESET menu with the
possible exception of hands free operation?

>"Russ Gilbert" russg@en.com replied:

There was also a replacement for the math-pack available.
As I remeber correctly, it also speeds up the plot and draw routines.
You can test the effect of both with the sysinfo program by draco (cant
remember if this was the correct name).

BTW: The Boss-system is coded with turbo-basic - isnt it ?
So why not speed up by using machine code for some critical routines ?

bye,
Matt

Well my 800 (not XL) has the solid self-contained switches in the keyboard which are a pain (but not impossible) to clean. I've heard the XL's had several different types of keyboard, if you're lucky yours will have a thin mylar sheet that's easy to wash-n-dry. From what I've seen, there aren't any small springs, just small screws. That's not to say that yours won't have though. This reminds me, I need to fix my 'N' key!

I have to reply group or edit your e-mail address.
I'm not sure you even have an aol account.
mioinit3.arc is at ftp.spudster.org in the CTH utilities misc directory I
think.
There's mioinit.arc and mioinit3.arc and maybe mioinit2.arc. Probably
the 3 one is the best.
You might also want the mio_menu.arc it allows accessing the mio menu
from DOS.

The Atari Basic Source Book is available here:

ftp://ftp.spudster.org/pub/Atari/CTH/Programming/Assembly/AtariBasicSource
Book.zip

(I'd copy and paste this address if I were you. Note that it's a long address
and ends with "AtariBasicSourceBook.zip". It might appear as two or more lines
on your computer.)

Or if you'd like it just online, try:

http://www.ping.be/kim-1__6502/6502/absb.html

(again I'd cut and paste. That's 2 underscores between kim-1 and 6502)

I disconnected the ribbon cable and an apparent ground wire to separate the top from the bottom of the case; next I removed 4 screws which hold the KB assembly to the case top. With the KB face down on a large towel on the table, I removed approx 15 tiny screws and slowly lifted the metal back with mylar from the keys matrix.

No surprises and no visible holes in the mylar nor protruding springs; so far so good I smiled. Then a sudden lapse of sanity as I lifted the keys matrix to verify which was 'Return'; just as it passed through vertical, about 50 tiny brass springs cascaded to the table and the floor. I stood motionless to retrieve all I saw from the table and around my feet then felt for others on the rust carpet under the table. Next it was hands and knees with a flashlight feeling around chair legs for the last couple. With a spring in each recess I wiped clean the mylar top surface and blew between the mylar sheets, lined up the holes and put it back together.

After some trial and error centering of the KB in the case top to avoid binding and sticking function keys (initially it again failed the KB self test), I am back in business with a very positive sense of accomplishment.

Well,
after you put the SYS file to a disk (be sure to use 360k or higher densities!), copy all your ML files (named *.COM) to this game disk. Next, lock all the files, which should appear on this menu and boot the disk... Now a menu should appear where you can select files or dirs/subdirs. Pressing RETURN or the fire Button should load a file or change the directory... -Andreas

P.S.: Well, at least this was the way I did it - and it worked !!

Where would on acquire those 'mioinit/miosave' programs?

Won't get to the RAMdisk stuff until maybe this weekend; see XL trouble in a separate thread.

>"Russ Gilbert" russg@en.com replied

Source record: 37479

Well,
do you mean a Sector Copier ?!? This depends on the drive(s) you have
and the densities you are using... For a Happy or Speedy drive a sector
copier that supports these speeders and 90k/130k/180k would be fine. For
a US Doubler any US (sector skewing) sector copier would be fine, for an
XF551 an XF551 copier program with XF highspeed and up to 360k would be
fine; for a Turbo drive a turbo copier would be fine... etc. etc.

Well, you will get some problems (maybe - maybe not) when using mixed
drives, however. And past 360kbytes there are not so many sector copier
programs. I have one sector copier for 720k and there is also the
SpartaDOS Copy or Xcopy program that can copy up to 16 MB
partitions... -Andreas

Well,
speaking of Prof. Copy 2.1 this is a file/multi-file copier. It needs
xtra-ram (i.e. a ramdisk) and if I remember correctly its all greek,
ahem, polish to me... There are other multi-file copiers, that do not
nescesarily need a ramdisk (but which may support one, if one is there).
And there are also dozens of good sector copiers. Just use or search for
the one which fullfills your needs (i.e. which supports your avaiable
drive formats or densities and your drive speeders)... -Andreas

Message-ID: <3AD47379.E95FBDE0@mail.uni-mainz.de>
Source record: 37483

Well,
on PAL the artifacting does not work, thus it is b/w. Besides, the VCS 7800 Tower Toppler comes in 320x200 x4 colors and it works alright. The XL/XE prototype does not: it completely crashes after the second level (well, there are interlude levels after each tower and if you have finished the 2nd tower, the game directly crashes or it crashes after this interlude...) You know, the 7800 has more colors on 320x200 than the XL/XE computers. It can also display more players and missiles than XL/XE machines (256 players and 256 missiles, if I remember correctly). So even in the first two levels (the first two towers) you will recognize some kind of trash or garbage on XL/XE - thats a player or missile (an enemy) on the VCS. The XL/XE just cannot display it alright, since there are already 4 or 5 players onscreen... In short words: the XL/XE version of Tower Toppler sucks, it seems unfinished or missed the debugging time. Thus it is much better to buy the VCS 7800 Tower Toppler cart, if you have a 7800 VCS... -Andreas

Well,
as said before, I am out of ideas. Visit me here in Germany (our german
Tornado fighter jets will bring your Us planes down, haha!) and I will
give you help. Or I will visit you (with a chinese plane, ha!) and give
you some very easy help: You need not care anymore about Atari, because
I will take everything away I can find in your house... Just joking of
course !! -Andreas

#P.S.: Maybe the disks have some special format (sector-skewing,
turbo-format, etc.) or any density you cannot read... Or there is
something missing on them (i.e. they have good boot sectors, but miss
the DUP.SYS portion or any other data), who can tell ?!? Just use a good
DOS disk (or different DOS versions) and try to find out whats stored on
these disks - if you can escape the Self test someday...

>The Atari Basic Source Book is available here:... (snip)<

I have the original book, and when I saw the ZIP file was 280K, I thought "no way this is complete." But then I looked it over, and it sure appears to be complete. And the compression achieved is about 25% of the original HTML. Anyone know how this was done? I presume it was scanned, since you can still see the spiral bindings. But to go from a TIF file (or some other format), OCR'd (?), saved as HTML. Or maybe not OCR'd, but went directly from TIF to HTML? I'd sure like to know what kind of a process this went through -- I still have a problem grasping a whole 280 page book in about 1 meg of HTML....
Larry
P.S. The Gilroy what??? :-)

Check the site <http://www.abebooks.com/>...search for the title and you
may find they have about four copies for sale. This site lists books from
sellers across the U.S. and some in Canada. These are used books, so be
sure to seek the lowest price...price can vary *widely*...

Larry,
The file AtariBASIC.SRC was just a simple text file when I got it. The
web site used a graphic like a spiral bound book. I replaced the default
font in mine with the Atari course font at 6 points and printed the
whole thing. (78 pages worth). Obviously NOT the layout of the original
book, but hey... I didn't get a chance to look over the rest of the
files in the .ZIP.

2419. Boot Disk loader

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-12 15:15:35 UTC
From: Eric Sokolowsky <esok@cosimo.gsfc.nasa.gov>
Message-ID: <Pine.SGI.4.33.0104121110090.27303-100000@cosimo.gsfc.nasa.gov>
Source record: 37493

I have a program that will take a disk and add a boot loader to it. The boot loader will bring up the first 9 filenames on the disk and then you press a key 1-9 for the file you want to load. The loader is very small (I think it fits into the three boot sectors of a 2.0/2.5 single density disk) and I haven't found a program that doesn't load with it. Of course, using this won't let you use DOS, so I use it primarily for games and loading translators for other games on my 130XE. I will have to hunt for it and as soon as I find it I'll either post it here or send it to interested parties (The program that creates the boot loaders is small).

Source record: 37496

Hi there!

The Epyx Shrine (http://home.nexgo.de/cybergoth) now features an
additional page about Gateway To Apshai.

Other news on the Shrine are:

- Added one of the two promised Jumpman Jr. interviews
- Updated my hombrew attempt Gunfight 2600 port with a new version

Apart from that, I'm still searching some friendly guy with both a
scanner and an Epyx catalogue from 1985. Can someone provide
complete+readable scans of such a treasured item?

Greetings,
Manuel

2423. Ethernet for Atari 8-bit

Has anyone tried to construct a (10Base-T) ethernet adapter for the
Atari 8-bit to allow fast file transfer to PCs? There is something like
this being worked on or already exists for the C64... Here is part of a
post that talks about it from the alt.c64 newsgroup:

>>>>> There is no ready built solution for your problem as yet, but
>>>>> an ethernet project is currently under construction

There's a couple of hacks out now for attaching networks cards to micros. I
remember one for the AVR anyway, artical in Circuit Cellar.

It would be hard to get more speed then we currently get with SIO. There is
always someone that comes out of the woodwork and says "1-4 megs/sec" but
the fact of the matter is through put is always limited by by a 6502's ~.1
MIP to ~25kb/sec. I think if you managed to hack an Atari to 1.84 vs 1.79
MHz <something I did a while back BTW> you could get the proper divisiors to
run at 115k baud => ~1/2 the maximum theoretical rate.

2425. Re: Cartridge Dumps?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-13 02:20:16 UTC

Message-ID: <9b5nqb$802of$1@ID-60478.news.dfncis.de>
Source record: 37349

The article was uploaded to the UMich archive back in 1998, but I haven't checked lately to see if it's still there. It's called copygard.txt, and was formatted for PC's. I tried to keep it as close to 80 columns as possible, and I know I spilled over a few lines while transcribing, but it should still be pretty readable in just about any text editor -- ok, maybe not AtariWriter, but I haven't tried it either, so you be the judge :-)

I asked this question back in 1998, but nobody had an answer then, so I'm posing it again: Does anyone know if Gardner Computers, Inc. wrote the programs on the Pirate's Treasure Chest, or was it just a collection of PD software that they packaged and sold under that name?

Steven

FREE!!! If your looking for free Atari Catalogs, read on down below!!!

I have some semi-FREE Atari stuff. If your local to me (Portland, Oregon USA) Your welcome to come pick it up for FREE! Dan Vernon, this offer is also extended to you. If your not local to me, you'll need to pay me to ship it to you. Besides paying for Shipping, a bribe will be expected or it isn't worth my trouble. You could also make a purchase from my Atari Catalogs which would motivate me. If you have someone local to me who can come pick it up for you? I would appreciate it. And while your here you might buy something. FREE stuff I have? 520STs, the first ST computers without built-in floppies. A big box of 3.5" Disks you can use! Atari 800 Computers. 8 Bit Drives & HardWare. E-Mail or Call Ben@(503)256-9974!

e-mail: atari@benjamin.net

I've just added 6 boxes of Atari ST Software, including some choice Games. So please checkout my Catalogs as they Grow! Not just ST Software! And I'm offering a 20% Discount to my regular customers! E-Mail me for Details on Redeeming this offer! I'd like to say Thank You for letting Bravo Sierra Computers Support you and your Atari Needs. Haven't bought from Bravo yet? Give Ben a Chance! I can be quite Beneficial. Remember, if you can't come see me today? Come see me tomorrow! Call Ben anytime at (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. My customers love the speedy service! I also have lots of Atari Reference Books. Which I can Mail by Book Rate!

I've switched ISP's! Try www.pacifier.com/~atari or atari@pacifier.com and as always www.atari.benjamin.net and atari@benjamin.net still work but are being redirected to my new ISP and since I've moved, I have revamped and updated my WebSite and all my WebPages. So Check it out and, If you don't come see me today, come see me Tomorrow!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari 64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net while you Download Free Catalogs directly from my site. If you can't get my Catalogs that way, Feel free to Request catalogs by E-Mail. Really, it's not an inconvenience. I ask that you specify Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can

download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your full Mailing address so I can figure Shipping & Handling. I'll be back after the weekend. Bye!

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or atari@pacifier.com instead of NewsGroups as I am swamped and I find it hard to keep up with reading the NewsGroups.

I update my catalogs once a week. Just before this message is posted. So when you see a new posting, check my Catalogs. After I post this message. I'm off for the weekend. But I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or atari@pacifier.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Bravo Sierra Computers has Moved! To a New ISP! Now Hosted on pacifier.com!!! Atari 8 Bit, ST and Jaguar Hardware/Accessories, Software/Games & References/ Books. FREE Catalogs on the web at http://www.pacifier.com/~atari or at Ben's SubDomain at http://www.atari.benjamin.net Catalogs Requested by and Received Through E-Mail at atari@pacifier.com or atari@benjamin.net and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Source record: 37354

I am trying to use several different DOSes with little success. I booted Spartados 3.2d and it gives me a READY prompt. Typing DIR renders ERROR - DIR, CAT renders ERROR - CAT, LIST renders just ERROR and then READY.

What is the command to get a disk directory at least.

Thanks...

Sounds like you've booted up with BASIC.

Try typing DOS and then [RETURN] You'll get a command prompt. DIR will
give you a listing in Sparta format, DIRS gives you the classic Atari DOS
2.x listing.

Sorry about that <grin>, I didn't think that they used the hell-springs in the XL's KB. At least you were able to remove the mylar sheet, I washed mine with dish soap and warm water and it worked like a charm. I'm not sure I'm clear- are you still having trouble with it?

That's pretty interesting! The only time I ever saw this game was in an
E-bay auction, yes I got sniped at the last minute. The really interesting
thing was that it was an Epyx cartridge! I never even knew that Epyx made
cart programs.

> From: pcman@ozbytes.net.au
> hi everyone
> i just got a atari portfolio computer

A cute portable machine. I would have used it longer if the memory was
more stable. :) Toting a small "Atari" labelled machine would have been fun,
but unfortunately I am spoiled by Newton messagepads. :)

> the screen dosnt seem to work on it so i pulled it apart and the ribbon cable
> between the lcd and mainboard is broken
>im after someone that can replace this or has a portfolio that dosnt work that
> they wanna sell

> cheers
> pcman
> cmaggee@start.com.au

Back when I was trying out the Portfolio (and rescued one from a used
electronics store) I had to replace the hatches, the keyboard mylar underlay,
and a multitude of other things. In the end Best Electronics was a great help
and had all the stuff I needed. And Brad has recently been helpful in getting
my SLM 604 laser printer online again (and saved me from buying a drum). So
yeh, they're based out of California:

http://www.best-electronics-ca.com/

Contact Information
Our hours of operation are Monday through Friday 1:00pm to 5:00pm PST

Telephone
408-243-6950

Rick,
That makes sense. How difficult is that hack to 1.84MHz on either an
800XL or 130XE? I need more x-fer speed. I have a lot of old disks to
x-fer to my PC. Even 56Kb/s would be a huge help.
On a side note. I have a couple of XF551 drives and most of my disks
are in Sparta 360K format. The drives are giving me fits over here. Once
I resolve that problem. I can start the transfer via null-modem cable
at 19200. I'm not sure if my XF-cable will work with my new machine.
P3-933 Dell.
Play time... B^)

Additionally, you can print the directory to a printer with:
D1:>DIR *.* > PRT: (The spaces you see there are required.)
(now I forget if it's PRT or PRN:) I've been doing MS-DOS for so long
now...) Anyway, many of the commands are very similar to those in
MS-DOS.

Speaking of SD3.2d has anyone converted the manual for that to e-form
yet. I could use a copy. It had loads of great info in it. I sold my
original package when I got SDX. I'll have to check www.myatari.com to
see if they still have a few... B^)

When I get my new scanner I'll be able to do the SDX manual and a few of
the other OSS manuals.

Source record: 37360

hi all,

i recently bought 2 rana drives (one was supposiblly dead, but seems to work) however there is a problem and i am not sure if it is with both or just one of them.

it seems that some floppys can be booted to both of the rana drives (such as the actual rana dos floppys, can't think of what the name of the dos is, but it is 6.1d version) but other floppys can only boot to one drive or the other.

i did run a speed test on both of the drives and the one that seems to work better has a speed of 288 to 290 rpms and the one that doesn't seem to boot as many floppy's only has a rpm of 280 to 285 or so. i have heard that 288 is supposed to be normal. is 280 within the tolerances?? how about 290??

how can i alter the speeds in my rana drive? is that most likely the problem with having disks that sometimes boot or sometimes don't? also if i make a boot floppy using a blank floppy on one drive and try booting it to the other, that usually will not work even though the orginal floppy i booted to will work on both drive... usually.

any ideas ???

thanks
bo

Unfotunately I don't own one either. There's two more Atari cartridges
from Epyx: Pitstop 2 & Jumpman Jr. Seems like these are pretty rare
stuff & most people played the uhm... *disk versions* of it :-)

Greetings,
Manuel

The mylar was barely dusty and not dirty so I opted for a little wiping and "air" cleaning; thus keeping it moisture free. Knock wood, it seems to be holding so far.

Do you have any good plans on how to install an easy cold start switch?

> x-fer to my PC. Even 56Kb/s would be a huge help.

I used a ~74LS193<or 1?> counter to divide down from a higher crystal, but I
think all you would need to do is switch the existing crystal with a 3.68
MHz crystal or switch an 3.68 MHz oscillator with the xtal input pin of the
GTIA. Three pole switch kind of thing with the center going to the mother
board, two crystal legs tied together and attached to the mother board, and
the other legs of the crystal going to either side of the switch.

I changed the timing for the HSYNC pulse so I could have stable video, but I
think this isn't really necessary for transfers. You can't believe how
stable the 6502 is to static operation/clock variations. I was switching
between clock sources with a bare wire applied to pins and the the Atari

never glitched once. I added a switch later and no problems there either.

I think you could just set up the transfer at 1.79 MHz with stable screen,
flick the switch and start transferring. I'm not sure where you would find a
program that supports setting the serial rate to 115kbaud.

Steve Tucker says a SIO2PC cable works with the RVerter handler.

I'm now running a new Dell P3-933 with Win-2000. Will APE work with
this?

Well the 8-bit is back up, but I'm have a bit of trouble transferring
files to the PC. It use to work with the old PC. Hmmm... I'll keep
working on this. The loader/menu program is very simple and will allow
many files. I have no idea how many. It just adds a letter/character
for the selector to however many programs there are on the disk. I've
had this one since 1982 and has always worked.
The Sparta one works pretty well too, but requires SD1.x on the disk to
work. Not always compatible with the programs.
As soon as I can get the file on the PC, I'll e-mail it.

The one I have was originally for AtariDOS 2.x, but seems to work fine
with Sparta (all versions I have) and MyDOS. It's a simple autorun.sys
file that goes on the disk with DOS and your game files.

Stephen J. Carden replied to one of the users on this net or directly and I received a copy. Mr. Carden, you are a bald face lire! I purchased BBS Express Professional from Keith Ledbetter in 1993 or 94, doesn't matter exact date as I have if in writing. You approached me in your lame, Tooth Drugged attitude or under the influence, threatened to put the code into Public Domain at that time unless I took you on as a programer. Well Sir you at that time cost me a phone bill, with your trivia in excess of #300.00 a month, I reluctantly agreed and the phone bill increased over the years.

I paid you for each module you produced, not reducing any commission by the phone bill I encored. So for many years you came out ahead. Not a problem, as I kept the program alive and available to those that wanted it.

I also in your drugged or drunken stupor purchased, items from you that others would have passed upon. The last conversation I had with you was to Sparta 3.3c, which you informed me that M. Hohman had not paid his bill, and that you were going to release it into Public Domain. I told you then that I would pick up the charges, sent you a check for the amount we agreed upon, can go back on checks as I just learned 7 years so it is still in effect for the source and all M. Hohmans rights to Sparta 3.3c code which you sent me the day I told you the check was in the mail!

I personally take offense to what you posted to Lance Rinquist! Mother Fucker you want to be taken upon you offer in court? Go for it, I have Canceled checks you cashed, with a notation on the bottom of each as to what it was for!

And do not ever tell Lance or anyone else in this community, to call me and tell me what you have in your stupor said! Pick up the damn phone and do it yourself!!!

You may think you have screwed me and K-Products, but before you do anything I honestly think you should go back through the checks you cashed in your behalf and see exactly what you were agreeing to!!!

I have spent a lot of money in the Atari 8-bits behalf but I do guarantee you I will not be fucked over by you or anyone else! Take your life as it is now and live it to your fullest mess with mine?

I have a test version for 95/98. I built the 1 chip cable, but could
never get it work. It's been a long time since I tried it, so I guess
I'll have to give it a shot with the new machine. I have to check the
wiring of the cable too...

> is supposed to be normal. is 280 within the tolerances?? how about 290??
>

The drive speed should be set at 288. The 810 / 1050 ran at this speed. The
XF551 uses a speed of 300 (which is why Flight Simimulator 2 doesn't work
with this drive).

>
> how can i alter the speeds in my rana drive?

There should be an adjustable potentiometer (adjustable resistor) that will
allow
you to adjust the speed. Try and look for a marking on the circuit board near
the potentiometer that might be labeled "RPM".

These pot's are usually the 10:1 or high precision value varitey. They can be
a blue or black square box with a small flat tip screw adjustment.

If there is more than one pot, be careful of what you adjust. You might adjust
the write precompensation circuits that disk drive controllers usually have.

Take care to note the position of the pot before adjusting. Then turn it slowly

and see if the drive speed changes. If it doesn't, then this isn't the
adjustment you
want and put it back in its original position.

Good luck.

288 is optimum and it is +/- 2-3 so 290 is OK and 280 is getting way out of
range.

>how can i alter the speeds in my rana drive? is that most likely the
>problem with having disks that sometimes boot or sometimes don't? also if i

You do not specify which drive is worse nor which one gives which symptom, but
I reccomend readjusting that slow drive first.

-Ron

Inform everyone that communications have completely broken down.

And do that as fast as possible. When the drive runs slow, it
creates/destroys your disks. I am not sure 280 would destroy it, but to
create a bad sector on a disk, an old copy program did this exact thing. It
tried to write or read to a spesific sector and you should set the speed
down to make it create a bad sector.

Be careful with your disks, just in case

If either/both of you are lurking, I'd like to log on to your telnet BBSs,
but I need something appropriate to type in for logon and password.

You may respond by e-mail if you wish to keep this private.

Some of the old OHAUG members are coming over to my house on Tuesday night.
I want to show them some things, among which are your BBSs!

Thanks.

Alan

Oh yes, Epyx made carts. I have the this game along with their other
disk game Temple to Apshai. Temple was excellent and I had many along
hours of fun playing it. Gateway is more arcade-like, but is still fun
to play.

you could give my beta-test version of Atari810Win a try! It doesn't do near all the stuff that APE does yet... but I'm working on it. So far, it just reads and writes at standard SIO speed from atr disk images. Also it is free software. It does work in both NT4 and Windows 2000.

get it at: http://www.bitsofthepast.com/atari

2459. happy sio commands anyone?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-15 14:50:12 UTC
From: Dan Vernon <danv@bitsofthepast.com>
Message-ID: <9bcc5uuot1@brokaw.wa.com>
Source record: 37383

Hello all,

I'm trying to add happy compatibility to Atari810 and need a little help.

When I boot with a happy-aware DOS (such as Dos 2.5+ by Tim Patrick, or Warp-Speed DOS by Happy Computers): First I receive some standard status and read requests - no problem. Then I receive an 'H' (0x48) followed by a space (0x20) -- a happy write protect off request - no response needed . Then I receive first a request to speed-up: a '?' (0x3f). I respond to this with two bytes of 0x10 which is a tidbit I gleaned from the SIO2PC source. I *think* that this means jump to 38400 baud. Finally I get tons of 'r' (0x72) commands which I believe are Happy read sector requests, although I can't find any info about this anywhere.

When I "snoop" on my own happy 810 when booting, the 'r' commands are definitely for high-speed sector reads (can't see how the drive is responding since thats on the data out line). However, it looks to me like the sio commands coming through standard speed and the data is expected back faster. Can anyone shed any light on this? I need to know exactly when to shift into high speed and how fast it expects the data to come. It doesn't seem to work to just go to 38400 baud at the data frame. Perhaps some of the Acknowledge - Complete sequence needs to be high speed as well? Or does the happy drive expect something more than the 128 bytes of sector data back?

I do have double-speed I/O working great with SpartaDos 3.2g. Although I think it must be in "US doubler" mode or something because I don't get any special happy commands. Just speed-up '?', which I respond to with two 0x10 bytes. After that, just about everything (commands and data) come 38400 baud.

I have used replacement calculator rolls for the 1027, Royal machine I think.
But they are longer so need to be cut down. You get three or four pads that
way. I don't reink-probably needs an oil based ink.

We used to re-ink with the contents of a bic biro. Worked fine.

2465. Atari 8-bit software Online

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-15 19:16:25 UTC
From: phantomm@bellsouth.net
Message-ID: <dsmC6.358$rk3.13184@news1.atl>
Source record: 37389

Are there any FTP sites that have Atari 8-bit software thats ready to run
on an Atari 8-bit?

If the files are compressed in ZIP, LZH, or ARC format, that would be ok.

I have an Atari Falcon with an 8-bit emulator and would like to download
some Atari 8-bit software that I can run on it, or transfer from the Falcon
to Atari 8-bit using a null modem cable with an ICD MIO.

Thanks for any help,

phantomm@bellsouth.net

I've kept a bunch of A8 files in the CTH archive in their native formats.
Check out-

ftp://ftp.spudster.org/pub/Atari/CTH/Games/DCM
ftp://ftp.spudster.org/pub/Atari/CTH/Games/FILES

There's a bunch of other directories containing non-ATR type files. Just
transfer them to a real A8 and they are ready to run.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

I did grab that. I haven't had any time yet to play with it. It has a
feature for communicating directly with a PC? Does it HAVE to use disk
images or can it WRITE/read directly to the PC native disk directories
(preferred method for my purposes). I have having to use those .ATR
files.

hey thanks for the replies. i am going to adjust my drives probably tonight
when i get home. it really doesn't sound all that difficult. i am assuming
that the most pain in the arse part is going to be acutally taking the drive
apart enough to gain access to the adjustment pots and being able to keep
all the connections connected so i can adjust it while its powered on.

well thanks again,
bo

Hey there -

Does anybody use the K-products
hard drive interface that may be
able to shed some light on it's use?
Pro's? Con's? Compatibility with the
major OS's.. Special Features?

I'd like to buy one but I don't want to
get stuck with something not practical
to use...

I use APE with a single chip SIO2PC cable on a Win98 PC and it works great!
It WILL NOT work with NT/2000. I tried it on 2 different Win2k Pro systems.
The software cannot get control of the serial port under the NT systems.

Dominik

I used to have an Atari 400. I was trying to find info on a game I use to play alot. I beleive it was called Buried Bucks. The game had a helicopter that you used to shoot up the ground, fly in and pick up money. The game was loaded from a cassette tape.

Does anyone else remeber the game or who made it ?

This is interesting since I run a few Win 3.1x communications programs
for dial-up to various systems at work. I'm running W2K-Pro at home.
These programs seem to work just fine. They never were intended to work
on a layered OS like Windows 2000 either. Hmmm...

I need some software and interface cabling that will allow reasonable
speed transfers from the 130XE,XF551,MI/O to my Win2K PC (directly to
the PCs HD directories, not an .ATR image.) I can build the .ATR images
later/as needed for the emulator(s).

Any suggestions?

'Buried Bucks' was an ANALOG game by Tom Hudson.
About 1982 I think. I don't think it was a magazine type in, maybe,
but I think was sold separately from the magazines.

I didn't find it at Video 61, B&C or Bravo Sierra, so it probably doesn't
come as a disk or cart game.

How to you handle the I/O timing? When I was writing my roughly
equivalent 810/825 emulator, I ran into horrible latency & scheduling
jitter in NT/Win98 even using realtime priority threads in busy wait
loops. I/O timing was OK until I did something like scrolling a
browser window while it was going on.

This was on a K6/2 233 using Visual C++ 5, maybe faster hardware will
overwhelm the scheduling pathologies by providing more speed...

Message-ID: <9bgka7$5gt$1@brokaw.wa.com>
Source record: 37309

The hardcore I/O is all on a separate devoted thread. It pushes status
messages on a queue which the UI thread pops off to display if there's any
idle time. You can dink with the window all you want and it will not
disturb the transfer. Sometimes the UI gets behind whats actually going on
but its really no big deal. Also, the program relies heavily on the Win32
communications layer to really do most of the work notifying state changes,
so the program never spins in a loop polling the port state and so on.
Sorry the source is not ready for you to check out yet... I'm very close to
being happy with v1.0. I have done a lot of work to stabilize reading and
writing under very heavy loads (like during a large compile and simultaneous
grep) and for the most part the transfer of data is successful. I'm more
concerned with reliability than tons of cool features at this point.
CPU usage never gets above like 3-4% in my testing, although I'm using a
P-III 450 with Win2k. I'm really hoping for people with slower NT machines
to try it so I can figure out the minimum processor requirements.

Ok, ok :-)

I recently got my Atari out of the closset again and the first game I
played (yeah, I started playing games offcourse :-)), was Bruce Lee.
I always loved to kick that Ninja back to where it came from.

And, believe it or not, the first game I _ever_ bought, was Boulder Dash,
on tape! and, (that's the believe it part) it still works! Right off the
tape! A 15 minutes wait, but I loved it, just like I did the first time!
Got stuck in Level M though.... Damn!!! :-))

Great to see most of the people of some years ago are still around. I
have been ill (still am.... :-( ) but I plan to read and maybe post
some more here again.

Also, I'm planning to convert all my sourcecode-disks to ATR images, cuz
they probably wear out sooner or later. I have a _lot_ of music and
graphical demos I never let out to the public. I don't know if you'll
find them any good, but I just think they shouldn't be lost forever.

Anyroad, I'm off to bed right now :-)

Bye,
--Ivo

I tried it, but had no success running it under a plain Win95 OSR 2.1.

It claims an export in Kernel32.dll missing.

I dont know, if this is the originail kernel32.dll, cause I had to patch
Win95 to get my AMD k6-II-450 running.

Any ideas ?

what about the shareware versions of 3.2 (f;h) ? Did they come without a
manual in electronic form ?

Otherwise you could find using and programming hnts in the BW-Dos
manual, cause the dos is very compatible to SD 3.2.

No it isn't if you used k6upd or similar, try using usbsup as well, and make
sure your pci bridge drivers are correct. then reapply the k6fix. This is
the usual way to fix these sort of problems. Or you could try formatting,
this is the quickest win9x cure....

2491. Tuesday IRC Chat Atari 8bit Topic: Which DOS is Best?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-17 11:07:40 UTC
From: DCM01@USA.NET
Message-ID: <3adc21bd.2076272@news.CIS.DFN.DE>
Source record: 37315

This announces an IRC chat for Atari 8bit enthusiasts on Tuesday April 17th, 2000, 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Which DOS is Best." We will address the merits of different Operating Systems for the Atari 8bit, including the standard Atari DOS 2.5, the ill-fated Atari DOS 3.0, the power-user's favorite Sparta DOS, as well as MyDOS and some of the less-well-known DOS's such as BeWe DOS.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard. Pirch is another one.

Most people have a Windows machine, but there are many other options for running an IRC Client. Arachne has one that runs in DOS.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

Bruce Lee is one of the best. I think someone was tweaking a deluxe version a year ago that was put online at Closer to Home BBS?

Gatekeeper, I hope you put your musical and graphic demos up. Like you said it would be a shame is your home flooded or something, and they were lost forever. I had some similar sentiments, but about some Amiga programming I had done. The stuff was not really great, but it was good enough that I wanted to share it, rather than leaving it on failing floppies. I screenshot and uploaded all the stuff that was good,and a few things that were marginal. ;) Now it is a subsection of my webpage, and doesn't take up much space at all.

http://linux.tc3net.com/daclmi/amiga.html

So I hope you upload your efforts too. Someone will be interested!

>'Buried Bucks' was an ANALOG game by Tom Hudson.<

Yes, and I seem to recall that several years later, this game was re-released
by another company, and IIRC, maybe under a different name. (?) At that time,
I think it got a fairly negative review as being "dated". Anyone else recall
that part of the story?

Interesting. I had a dedicated thread for the comms too- actually 1
thread for each connected Atari, as my program could "serve" multiple
Ataris, though I wasn't using the comms api event stuff which is
really dreadful. I tried a couple alternative approaches, sleeping
when not busy or busy waiting to try and increase timing accuracy and
neither worked very well.

I wonder if its not the 450's speed overwhelming the scheduling
weaknesses in 98/NT. I never saw very much load either- SIO2PC stuff
doesn't consume much cpu time, though its timing is moderately
critical. Given the Atari I/O bandwidth and timing properties, I
think an old 8051 or slow pic would work pretty easily as a "disk
emulator" serving up sectors from an IDE hard disk.

I to gather you do see some timing instability- with large background
compiles going on. If so, it looks like timing problems are likely a
matter of degree in inverse proportion to the host cpu speed & load.

I set up basic support for 825 drives- the ones with 256 byte sectors
(hopefully I remember the name), though it didn't work extremely well.
I think I saw some odd behavior on the Atari end. Does anyone know
how well the real drives were supported by the 8 bits? I also started
on printer support, to the point where printers could be selected, but
no I/O support for P: in there.

I became a Linux convert not long after I got it more or less working
and haven't done much of anything with it since. The source is GPL,
if anyone wants it, please indicate so and I'll put it on my webpage.

Adam.
Like I said, I don't think it was a ANALOG magazine type in.
Tom Hunt made an index of most of ANALOG articles and I couldn't
find it in that index. There is a site dedicated to ANALOG (by
cyber roach if I recall).
I looked at the game on an emulator. You can probably find it
at Holme's site. I know you can find it at ftp.spudster.org
under games/files/b (file called buriedbucks.exe).
You probably don't have a way to get it to your real Atari, so playing
it on emulators is probably (maybe) your only choice. It didn't play
very well on my machine and atari800 DOS emulator. But at least
I could see the title screen.

I thought those were 815 DD drives which Sunnyvale never actually released. The Percom and ATR8000 256 byte sectors always performed flawless with my 800 & XL's.

Matt,
I'm actually looking for the SpartaDOS Construction Set (SD 3.2D)
original manual (in e-form). It came with 2 disks and the RTime-8 manual
in the pack. It's much more detailed than the SDX manual for
programming.

I'm not sure about that. My guess is that it doesn't do it correctly. It doesn't load DOS. It probably just calls SIOV Read Sector directly for both the directory and for loading the program after it's been selected. I don't know if this process works for DD disks.

On a related note, does anyone know how DD disks are formatted? I thought that the first three sectors of any disk are single density (128 bytes of data) regardless of the density. Is this correct?

I am doing the same except I am converting them to DI images which are
used with a program that runs on 16-bit Atari's.

But what do you mean by "directly"? Do you consider dialing up to a Unix
shell account a "direct" connection? IMO It's not any different from having
a Linux box and a modem at home doing the PPP dialup and using the Atari as
a console.

The only way to "directly" connect the Atari to the net is by implementing
PPP and TCP/IP, and then writing software that will be able to talk to these
implementations. I wish you luck ;)

Source record: 37338

Does anyone have any programming information on the ATR8000? Are there any emulators for it?

That is definitely the way everything behaves, but it is actually unclear whether sectors 1-2-3 are really 128 byte or the controller passes them back to SIO as 128 byte by convention as I have heard...

Bottom line is you must configure the DCB for 128 bytes when asking SIO to read the 1st 3 sectors from a DD diskette.

Exactly, what I'm putting together here is a linux box with two modems, one
is a stock trs-80 modem IB 300 baud, the other a 56k used for the main
dial-up. I'm using a telephone line simulator to connect the atari's modem
to the trs-80 modem in a pseudo dial-up fashion (I could just cable the
serial ports together but I'm going for authenticity and the complete 8bit
dialup experience). I haven't actually implemented this system yet as I'm
currently looking for an old fashioned deskphone to use on the atari's
acoustic coupler, these are getting pretty hard to find!

Actually, I believe it runs, but since my first motherboard caught on fire, I am very hesitant to leave it up when I am not sitting in front of it :) I was only getting about 1 user per week anyway so it wasn't a big priority to get it running when I got my new machine... and then the MB burnt up.

On another subject, off the top of your head, what would keep AT_Telnet (compiled under Win2k) from working under Win2k... winsock?

Never mind... apparently when I migrated the software from the old machine
to the new machine, somehow I got a bad BBS list file - and your telnet URL
was wrong. I fixed the URL and AT_Telnet (compiled under win2k) works fine
now... duh!

Cool job! I'll open a section with Epyx catalogs as soon as I find the
time to scan my catalogs. I've already gathered Fall '84, Spring '85 &
an '88 catalog. At the moment I'm looking for scnas of the Fall '85 &
both '86 catalogs.

I'll definitely have to link again to your scans, since these offer
lot's of infos about older AS games.
I've scans from an '83 catalog, would you like to put it up on your page
too, along with the '81/'82 catalogs?

> If
> somebody knows of a freeware PDF maker it would save a lot of trouble

I once found one, which was rather good. Only drawback was that it'd
create an additional advertisment page on every document... Hm... I've
forgotten its name anyway.

Greetings,
Manuel

There was mutterins of a ppp dialer and wap browser for an 8 bit machine,
apparently the rumour is more hopeful speculation than substance from what i
could work out. Someone i know claims to have seen a prototype set-up on a
BBC master system (128k) but he as a source is suspect at times.

Of old chips try places where they have old stuff, like a second hand store
that has old computers (old PC's have lots of RAMchips, some are xxx by one
bit, others are xxx by 4 bit. For the 600XL you need the 'by 4' RAMs), or the
recycle center.

> like that) ?

Varios. The floating point stuff is neither part of Basic, nor part of the Os,
it's in the Math-Pack ($d800 to $dfff). I wouldn't call the above a bug, but
just the lack of precision. IIRC, EXP and LOG where sensitive to these bugs,
and therefore the power function (^) was.

Try:

? 2^7

should give 128, but IRRC gave 127.99999 on some older releases.

Another bug within basic I remember of is the "NOT NOT" crash.

Try:

? NOT NOT 1

Not really math related, though.

Bob's probably talking about the KPI/Supra harddrive interface. No CD software is available for this interface as far as I know. If Bob has a BlackBox also, he can get software that is still in beta (the ASPI part) and alpha (the tools themselves) state. If you want full control over a CDROM player (well,you get my drift) you'll have to have/order the MSC-IDE controller. For which you can find software at http://www.birmanns.de/atari/index.html But that's IDE, not SCSI.

Yes, the 2nd one is mine but if CTH want they can use the full OCR'ed
docs I did a while ago.

They are the ones I have sent to people asking for it and are the
entire user manual bar pictures of which there are only 2 I think and
not needed for using the Omnimon.

I have the Assembler Editor and some beginner's docs at.
http://www.en.com/users/russg
ASMED is good for small things and making code for USR calls
from BASIC. Not good for larger applications, where you'd need
to make a library of macros.

If you're looking for a macro assembler, those are available, but
I don't know about docs for them.

Hi,

I am searching docs about assembler coding on Atari 8bit,
the programs: Turbo Basic and a good Assembler (I have
a standard 800XL with 64k RAM).

Thanx for Your helps says

Maybe PRINT (1/3)*3 will give you .9999999999, unless Atari Basic rounds it back to 1. I remember that the Atari used Binary Coded Decimal in their routines for more accurate results, but was therefore a little slower than Apple and C64, which went with less accurate but faster routines. I think the Fastchip rom that was an option for Atari 800s used routines similar to Apple and Commodore.
Anyone else?

> like that) ?
>
> Best regards in advance

From memory;

This is symptomatic of floating point implementations in general, some fp implementations are better than others. As I understand the problem, floating point numbers are stored as a ratio and exponent. Some values are easier to represent as ratios than others. The numbers that cannot be precisely represented as ratios within the capacity of a particular floating point notation will become imprecise in their least significant places. Generally, fractional numbers are easier to represent than integers.

In "conventional" floating point, addition and subtraction can introduce more error into their results than multiplication and division. So you'll see these errors creep in when doing lots of adding & subtracting more often than when performing lots of multiplication & division. Most times the operations work fine, but pathological combinations of error arise where precision is lost; 2 becoming 1.999999 for instance. Which isn't necessarily all that bad for "scientific" calculations, but is catostrophic for financial ones. This is why floating point should not be used for money-related calculations... There are ways to deal with it; add .005, then truncate to hundredths will round a 1.99999999 up to 2.00, but not round up 1.000001- this works, but can be tricky when dealing with complicated arithmetic. Some fp routines may well try to detect the precision loss and compensate, but thats well beyond my understanding of the issue.

For a real discussion of this, track down a copy of Donald Knuth's book on it. He has a series of book on various compsci related topics- very instructive reading.

Deleted my inbox by accident the other day, I had been speaking via
mail to someone who's name I can't remember at the mo re Black Lamp
not working on Atari800win and many other things.

I had promised a list of the non working files under Atari800 win
(well as best as possible) but my mother had just died that week and I
said I would send it after the funeral etc.

Well I tried to be good to my word but deleted the inbox, so please
get back in touch mystery person (sorry about forgetting your name but
its been a trying and sad few weeks as you know)

I'd say your post of trying to play 'ASM' files was a typo, but you
also put 'ASM' in your subject line.
I'm sure you're trying to play '.AMS' files.
There are some ams players in the audio/ams/amsplayr directory.
As far as I know, the actual AMS disk isn't there (in ftp.spudster.org)
I have an .dcm or .atr of the original disk.
Be sure to allow BASIC, I think, it requires (the original AMS) BASIC.

Howdy Michael, folks

>Is there still memory upgrades for the 800XL available? And where would
>one go? Thanks.

The schematics to the betaversion of my 1MB 30pin SIMM upgrade for all ATARI XL and XE(GS)s (except MAYBE 1200XL and 14x0XLy) can be found at http://www.holyoak.com/atari/ And so is the text accompanying it. But you do have to have experience in soldering, otherwise, wait for the PCB to become available.

Why take my design:

No flicker
No loss of (software control over) BASIC, OS RAM, SelfTest and if you computer is an XEGS, Missile Command.
No funny addresses
No loss of separate ANTIC and CPU banking.

CU Mathy van Nisselroy

PS still trying to chase some bugs out. And I could need some help. (please)

The FP-Routines are different from Basic, as fas as I know (Every A800
has a three built-in ROM, two for the OS and one for FP) Or does
Atari-Basic provide some additional FP-functions ?

All of the generic floating point math routines are in the OS ROM; some of the trigonometry (SIN, COS, ATAN) functions and SQR reside in the Basic cart ROM at $BDA5-$BFF9.

Basic A did have some bugs which Basic B changed while introducing more and Basic C finally corrected the great majority of them; most of these had nothing to do with FP math.

Hi Owen;
I have that and as cumbersome as it is, you will really enjoy it unless you are a real musician. It is a little arcane to use; I believe it has a cryptic (n o d . t) syntax reminder prompt which stands for:
Note= A-G, R= rest
Octave= 1-5
Duration= Whole, Half, Quarter, Eighth, Sixteenth, Thirtysecond
period (.)= dot for 1.5 times duration
Tie= slur notes together

eg. "a3T.T" is dotted thirtysecond "A" note in the third octave tied to the note following it. 1st 3 parameters required; last 2 optional. Saving and playing are somewhat intuitive from the menus; arranging needs some explanation.

Have not seen docs at any sites... Will try to type something up and send you when I can. Any questions, mail 'em.

There is a prior prompt with (S)top, (M)easure #, (I)nsert measure & (N)ote entry choices.

Plus the note entry prompt is actually "l a o d . t"; (L)etter = note, (A)ccidental, (O)ctave, (D)uration, (.)dot, (T)ie. The available octaves are parts of 3 thru 6 and the optional accidentals are (S)harp, (F)lat or (N)atural.

Hi everybody,
does anyone know a programme which makes it possible
to use the SIO2PC cable with Linux?

Thx.

Has anyone ever thought of converting the Music Composer files to MIDI so that they can be played on a SoundBlaster or compatible card? What about others such as Pokey Player?

eh, Tom? :)

Nigel,

I still have four NEW ink rollers for the 1027 printer. They're still in their original sealed packaging so they probably haven't dried out, but they were obviously manufactured many years ago so I can't guarantee their condition. They were originally priced at $5,99 each, but if you want them, you can have all four for $5 to cover the cost of packaging and shipping (within the continental U.S. only). Reply in Email if interested.

From: bo snyder <bobo_snyder@hotmail.com>
Message-ID: <B70586E0.1B1C%bobo_snyder@hotmail.com>
Source record: 37247

hi everyone,

i bought yesterday at the local thrift store about 100 floppy's from the old "first atari computer club of spokane". they have lots of utilities and stuff on them.

about 40 of the floppys also were "Atari Interface" floppys from around the early 90's. Was that a atari magazine from the early 90's?

i don't know quite how to actually read them, (i can get directories so i now that they are working floppys but unsure of the next step). they are in .arc format. i have used msdos and windows for so long i have forgotten the exact procedure for reading text files.

with ms-dos it is just "type filename.ext" but thats the issue, how do i read a text file in ataridos (these are mydos 4.5 floppys btw and they boot to mydos, no boot menu).

i know that the atari dos is a completely different animal than msdos, i just don't remember how to do simple things like read text files, (which commands do i use for that?), how to run .arc, .obj, and other files besides basic.

basically is there any tutorial on the web how to use dos with an atari? and how to different functions with the different versions of dos (mydos, spartados, dos 2.5, etc. etc.)

thanks,
bo

Well,
is this the german "Ultra Copier 1.1 (side a) and 2.0 (Side b)" once distributed by Ulf Petersen ?!? If yes, it needs a Happy or Speedy drive and may (or may not) backup copy protected Single density and Medium Density disks... I gave my version to Stefan Dorndorf, so he could include it (the knowledge of this and other backup programs, like MS-Copy, Disk-Master,etc. and copy protections) into his Hyper-XF-OS ROM and further more into some software (backup program) to allow the XF drive to do backups also... still waiting for the Hyper XF software to be released (at the moment it looks like this will never happen). I am not sure if it is avaiable anywhere in Germany at the moment, nor if this program has been sold outside germany... -Andreas

Very Easy !!
Get a score of 1 or greater and I have more points than you have !! By
the way, when the game starts, does it begin with one zero or with more
than one zero ?? Otherwise anyone could say, that he reached that point,
allthough he did not even start the game... (Lets examine the game
starts with three or four zeros and after you reached that great score
it sets back to one zero, that would make a clear difference!)

Source record: 37264

Well,
Single density (90k) and Medium Density (130k) disks are formatted with
128 Bytes each sector, no matter if boot or data sector. Double density
is always formatted 256 bytes each sector, also no matter if boot or
data sector. the floppies can only do/format/initialize/magnetize one
density on a disk (128 or 256 bytes); they cannot "mix" the density. In
other words, with Atari drives, the whole disk is formatted with 128 or
256 bytes per sector (not thinking of any copy protections now). But:
the Atari only accepts 128 bytes for the boot sectors, thus the floppy
drives have to fool the Atari when booting DD disks, i.e. sending only
128 bytes, allthough there are 256 bytes physically there... Thats what
some emulator programs forget, to send always 128 Bytes for the Boot
sectors !! -Andreas

2578. Xformer densities ?!?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-20 15:49:21 UTC
From: Andreas Magenheimer <magea000@mail.uni-mainz.de>
Message-ID: <3AE05A81.B28C8FD0@mail.uni-mainz.de>
Source record: 37252

Well,
some years ago I played around with ST Xformer (but soon gave up,
because it was so slooooww). This is what I found out about the ST
Xformer densities:

1) Single density (90k): the ST Xformer could a) create, b) load and c)
boot from these XFD images...

2) Medium/Dual density (130k): the ST Xformer could not a) create, b)
load nor c) boot from these XFD images...

3) Double Density (180k): the ST Xformer could a) create and b) load but
not (!) c) boot from these images, since the boot sectors were loaded
and saved with 256 bytes each, which the A8 did not accept...

Now, today there are much newer and faster PC versions around, like PC
Xformer 3.x for DOS based platforms and Xformer 95/98/2k for windows
based platforms. My question is: Is the Pc Xformer still unable to use
Medium/dual density ?? And is the PC Xformer still unable to boot from
DD images ???

I wanna know this, because I am currently creating a CD ROM with my own
Atari software. Since there are only 150-200MB of ATR images I have
enough space to include other image formats, like DCM, XFD and probably
also DI. But most (80%) of my private software is medium/dual density,
so it would not make much sense to include the XFD images, if the PC
Xformer cannot read/use them...

Yes, it was from the upper midwest and supported a dozen or so semi-affiliated
user groups nation wide.

> they are in .arc format. i have used msdos and windows for so
>long i have forgotten the exact procedure for reading text files.

".arc" is a compressed format, sort of a precursor to .zip files; you will need
Arcx.com or Superarc.com (probably on one of those disks) to expand them.

>with ms-dos it is just "type filename.ext" but thats the issue, how do i
>read a text file in ataridos

The simplest method is "C"opy to the screen editor (E:) device and toggle the
screen with ctrl-1; The MyDos 4.5 docs are on one of those AIM disks and the
Atari DOS 2.5 docs are on that site Mo suggested:
http://www.crestviewfl.com/~richard/atari-docs.htm

The best method is loading them into TextPro or VTex (both also on an AIM disk)
so you can move back and forth through the documents.

>just don't remember how to do simple things like read text files, (which
>commands do i use for that?), how to run .arc, .obj, and other files

".obj" files are binary "L"oad types from the DOS menu.

You'll have to use a word processor or text editor prog to read the text files. I haven't really seen any Atari dos with one built into it like MSDOS. Here's a link to a page of Docs on games, DOS's and etc.
http://www.crestviewfl.com/~richard/atari-docs.htm

I really appreciate the help from those who contributed here!

> Hi Owen;
> I have that and as cumbersome as it is, you will really enjoy it unless
you are
> a real musician. It is a little arcane to use; I

I'm a real musician (if you're interested in that, look me up on MP3.com :-)
and I plan on using the Atari 800 in a live P.A. techno bit alongside a C64
and 2 PCs. I think I'll have fun with it despite having a serious use!

believe it has a cryptic (n o
> d . t) syntax reminder prompt which stands for:
> Note= A-G, R= rest
> Octave= 1-5
> Duration= Whole, Half, Quarter, Eighth, Sixteenth, Thirtysecond
> period (.)= dot for 1.5 times duration
> Tie= slur notes together

I don't think I would've ever figured that out through experimentation only,
that's pretty awkward.

> eg. "a3T.T" is dotted thirtysecond "A" note in the third octave tied to
the
> note following it. 1st 3 parameters required; last 2 optional. Saving and
> playing are somewhat intuitive from the menus; arranging needs some
> explanation.

Right now, I'm checking out how to use the arranger part of the thing (with
goto's, etc.).

Someone is posting the manual on their website soon, that'll definately be
worth checking out. Thanks to that person too.

Are you looking for an assembly language tutorial or an assembler documentation?

If you are looking for the 6502 instruction set you could try my Assembly Source Interface v1.5AM (ASI15AM.DCM) it is a dis-asembly type program written in Turbo Basic and contains the full 6502 instruction set in an english form.

http://www.umich.edu/~archive/atari/8bit/Languages/Assembly/

Plus you may find other assembler related material elsewhere on the same site, even an assembler tutorial as i have a few of them that are on disk (pd)!

Atari basic provides some additional routines, indeed. The math-pack (as said
not really part of the Os) provides elementary operations (+,-,*,/), evaluation
of polynomials, log, exp and sqrt. Basic contained some additional, mainly using
the math pack routines as building stone, i.e. cos, sin, tan. (they use - rather naive -
taylor polynomials for approximation).

So long,
Thomas

2592. Using Atari Disk Drive Model 1050

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-21 06:26:59 UTC
From: Anodyne777 <anodyne777@hotmail.com>
Message-ID: <TK9E6.1436$Qi1.226040@news1.rdc1.ne.home.com>
Source record: 37266

Hi.

I came across some Atari 1050 disk drives, and I have no idea how to use them. I want to save compositions I create in a cart called Music Composer to disk - but unfortunately, although I can obtain 5 1/4" disks, I can't even begin to use them because I have no DOS. The software I obtained with these drives was in an unfortunate state (melted from garage storage).

Is there a way around this? Or could someone mail me a disk (I'd be willing to pay a couple of bucks for a copy)?

Thanks,
Owen Godwin

What they mention in the auction is that they had seen one like this attached through a special interface to the atari. They also mention that all that is included is the drive itself, nothing else and that it is 'untested'. I'd be willing to bet it's just a regular hard drive that is probably burned up. Forgive my scrutiny but I got burned on a Tandy hard drive on Ebay. It is pretty interesting to think of a hard drive attached through the joystick ports, I guess the SIO would have to be rerouted? How would POKEY talk to the joystick ports?

2599. Wanted: beta testers for A8 desktop

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-21 14:51:31 UTC
From: NoOne@FakeEmail.com
Message-ID: <908A6CF8CCTHEnterprises@205.212.123.11>
Source record: 37273

I've been working on a desktop program for the Atari 8-bit and I need
some additional help in testing it. You can read about it at-

http://cth.dtdns.net/desktop/p1.html

I can supply the desktop as a 1/2 meg ATR which should work fine with
an APE or SIO2PC setup. If someone has a real A8 setup with a high
capacity disk drive of some sort I could also supply the files in ARC or
ZIP format with installation instructions.

At this point I need feedback about

1 Display legibility reports on various types of TV's and composite
moniters.

2 Performance comparisons between various desktop configurations
involving ramdisk configurations vs. disk drive configurations.

If you are a gung-ho entheasusiastic Atari 8-bit freak and want to
help me out with these things (and more as it develops), please send email
to me at-

tom_hunt361@NOmy-dejaSPAM.com

NOTE: Take out the NO and SPAM in the email address before sending.

Thanks,
Tom

I have the actual upright arcade game in storage. I used to play that game for hours. I could be utilized as a consultant for any game type issues/questions that you might have. I consider myself to be an expert, as I have been all the way to Dungeon 31 before losing a Worrior (Worlord, at that stage). Of course, luck played as much a role as skill in this accomplishment, and I have been all the way past dungeon 99 before (it then starts assigning dungeon numbers out of numerical order. I think it's because the dungeon number variable holds only two digits, much like the y2k issue).

(has no boot disk)
A warning. You mentioned you can get 5 1/4" disks.
If you're talking standard computer store, you can't use those 5 1/4"
disks. I mean you can't use high density disks. They must be double
density to use with the 1050. Almost all double density 5 1/4" disks
have a hub ring, high density disks don't have the hub ring.

Source record: 37277

Alas, there is not an easy way around it. I could email you the instructions to make a DOS boot disk, but it would involve typing thousands of data statements..

US mail will be simpler unless someone is fairly close; who here is the nearest?

After receiving a disk, you must 'boot' the system in a specific order; connect Atari computer and drive and display CRT and all power supplies, insert Music Composer cart, power on the drive empty, insert disk when drive quiet, close drive latch, power on Atari computer. Drive should activate and load DOS and start the cart program which will allow you to load the DOS Menu to format disks, etc. The boot 1050 must be set to drive #1 with 2 little switches; they must both be toward the left as you look at them through the small window on the back of the drive case.

I live in Florida (USA). I could send you a copy of DOS (would 2.5 be best). Let me know.
It would be on an Atari floppy. Mike.

2609. APE98 question

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-22 02:09:59 UTC
From: Omar <omar27@bellsouth.net>
Message-ID: <KXqE6.1757$_a7.898121@news3.mia>
Source record: 37283

Hi group!
I've just set up my SIO2PC cable from the serial port on my windows 98 machine to my Atari 800XL. I've loaded APE98 onto windows were it seems to want to work fine. It tells me that it is using COM Port 2 and that it is ready on that port. "Ape is Ready" appears below.
The SIO2PC cable was purchased from the same site that sells Ape.
My Atari is unable to boot from any of several hundred games that I have on my wintel machine's c: drive. I keep loading the image and directing Ape to load the ATR images on drives 1, 2, 3, etc. but I cannot seem to get any response from the Atari 800xl after i keep rebooting it besides the basic blue screen that says ready.

My question (finally) is:
Do I need to configure my com port 2 on my wintel machine, for example, 8,N,1, 19200 baud, hardware xon/xoff?
Or any specific thing to set on that com port? I used to have a US Robotics 56k modem on that port which I went and disabled.

Also, do I need a null modem or something else attacheched to the SIO2PC cable in order for it to work?

And lastly, I have MyDos 4.5 on cartridge which I have also loaded into the Atari to see if I can run a program with it. I have no idea if it is really necessary since in theory I should be able to boot from the ATR image as it says on the Ape page FAQ.

Please help with any basic advice since I have just blown about 5 hours trying to get this to work! I you have documentation that you can share or direct me to a web page that would be terrific!

Regards,
Omar

BG Micro is selling the real thing for ~$7. I think the PLA/PLD/PEEL that could handle something like that would cost ~$10-$20.

If you could do it, it would be a one off type thing. I still hang out in local electronics places, just once every couple of months instead of every week. The combination floppy/IDE/serial/printer LSI interface chips used in IBM clones are available for ~$10.

It would be a good learning project but you would probably be the only one in the world with one.

Omar.
Steve Tucker will help you out. It may take a few days to get a response.
The only thing I see is that you are using the same serial port for
your modem. APE won't let you do that, even if you unplug your
modem. If your modem is internal, it is still configured as
COM2. If your modem is external, for some reason you still can't use
the port for the modem. If you have something plugged into COM1,
you may be able to unplug that and use COM1. I have a serial mouse
on COM2 and use that port for APE.

2616. Page 6 / New Atari User Mag Index?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-22 14:54:52 UTC
From: llpwhite@cs.com
Message-ID: <20010422105452.04667.00000218@ng-cm1.news.cs.com>
Source record: 37289

Has anyone seen an index for this? Page 6 did have quite a few good articles, and it was published for a long time, so an index would be very helpful.

Also, was there much of significance in ROM? I know very little about it, and never saw an actual ROM mag here in the U.S. (published in Canada, I think?)

Is there any way of transferring tape images back to tape to use in a real
800XL now that I have bought one again after 15 years in the wilderness :)

I've found ways of doing this with C64 and Spectrum images.

Thanks in advance

Source record: 37293

Uhm.
The problem with doing things with tapes on the 800xl is that
you need a disk drive or PC connection to do anything. If you
had the disk drive or PC connection (APE or SIO2PC), you
wouldn't need the tape programs.
I should check out what Bo Schreurs (sp) does. He does some funny
stuff with tapes. I think it is Ernest Schreurs.
Ernest makes cas2wav and wav2cas. You can make wav file from a tape,
I guess using the input of your sound card. Then you can make a .cas
file that can be loaded using APE or sio2cas. But there again, you need
the APE cable.
I'm going in circles. Maybe Bo or Ernest will respond.

Yeah, you need the cas2wav program, convert the .cas file into a .wav then plug a patch cord from the line out jack on your PC soundcard to a standard tape deck. press record and start the wav to record. This was the first way I used to transfer downloaded progs to my real 8bit before I got the SIO2PC cable.

2622. Atari Mega File 20 to 130XE?

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-23 08:32:59 UTC
From: Maaikie <nonsmoke@hotmail.com>
Message-ID: <9c0phn$aa8$1@blue.nl.gxn.net>
Source record: 37296

Hi!

I own a 130 XE and recently I got a external harddisk from the Atari ST series, the Mega File 20. Is it possible to connect it to a 130XE anyhow? I don't know what interface the XE or ST use to communicate with peripherals, but maybe they are in common and just need to change the connector?

I noticed that the Mega File has an in and output connector (like the XF551 I own)

What do you guys think...

Regz,

Mike.

well, I don't think that there is a chance to built a simple ASCI
(atari's own SCSI Port) to SIO. So if you would connect an external
harddisk you probably need a black box.

and heck, there isn't any argument to use a megafile 20, coz such a
bad hdd I never would use anymore.

2626. Tuesday Chat: Hard-Drive Solutions. Be There or Be []

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-23 11:20:07 UTC
From: DCM01@USA.NET
Message-ID: <3ae40e5a.1207674@news.CIS.DFN.DE>
Source record: 37200

This announces an IRC chat for Atari 8bit enthusiasts on Tuesday April 24th, 2001, 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Hard-drive Solutions." We're going to examine the different hard-drive setups for Atari 8bit, such as Corvus and Black Box. Many people view APE and other PC-based Atari peripherals as good solutions, so we will address those, too.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard. Pirch is another one.

Most people have a Windows machine, but there are many other options for running an IRC Client. Arachne has one that runs in DOS. Amiga has AmIRC.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

2627. Launching BASIC Program from BASIC

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-23 11:23:57 UTC
From: DCM01@USA.NET
Message-ID: <3ae40fed.1610262@news.CIS.DFN.DE>

I am working on a BASIC program with a detailed screen. The screen is drawn with a lot of DRAWTOs and PLOTs. To conserve memory I wish to use a separate program to draw the detailed screen. After drawing the screen that program would call the main program, and delete itself from memory, leaving only the screen.

Does anyone know an easy way to do this from Atari BASIC?

PRINT "NEW"
then move the cursor up, change E: mode from 12 to 13. Then STOP.
The program will stop, and commands on the screen will execute (you can
put more commands than only NEW).

i recently got about 50 to 75 floppys which all say atari interface on them.
t hey are from the early 90s or so.

let me know if you are intersted and we can see if we can work something
out.

thanks
bo

you don't need the extension disk to get Basic XE to boot. Before we go to more drastic measures... have you thoroughly cleaned the contacts? Especially if they are not the gold variety, they tend to really corrode and attract all kind of gunk. A pencil eraser usually does the job, if not use some 99% isopropyl alcohol on the end of a Q-tip.

Chainsaw (Mo) says he does write Atari cassettes from PC using
just the sound card and a .cas file and cas2wav software.
I believe him, but something strikes me funny about this.
It seems to me that the A8 doesn't use the same kind of recording
as a audio tape deck. I think I remember trying to copy a Atari
tape using just a two tape audio tape duplication deck and it
didn't work. If it did work, then all the copy protection on Atari
tapes wouldn't work, ... or something.

Its been a while since I've done anything with atari basic, but I seem to recall that you can do a simple "RUN #D:filename.ext" from within a program. That clears memory and runs the other program and its a legit command within a running basic program.

Piotr Fusik <pfusik@elka.pw.edu.pl> wrote in message news:Pine.SOL.4.30.0104231354300.4027-100000@elektron.elka.pw.edu.pl...

I have not yet been able to locate an index or any web presence for Pg 6 NAU. I did acquire a couple of years worth starting from #22 and am reading through them. Interesting, but nothing yet worth typing in and little info we had not seen in Analog and Antic.

I once saw an old issue of ROM; very little recollection of its contents.

Supra made a hard drive which was adaptable to the ST or the XL/XE; I never actually saw anything except the ads and articles around '86-'88. You would likely need some type of controller card and a Parallel Bus device like the Black Box or MIO although the ATR8000 connected by SIO to the 800 and mentioned hard drive in their ads.

I am suggesting the 2 separate programs method below; PART1 makes the screen and then the last line RUN's D:PART2 which will be the only thing left in memory.

Another option is to save the screen RAM to disk and then use CIO to retrieve it very quickly by the program. A 62 sector GR.8 screen loads faster than creating complex patterns.

The dynamic cursor method of POKEing 842,13 would also work to delete lines if you are willing to destroy that screen you just made...? BUT don't use 'NEW'!; print the individual line numbers that you wish to delete followed by a 'CONT' or 'G.1000' to return into your code.

OK after cleaning the connectors, Basic XE cartridge still doesn't work. When I turn on the computer a blue screen appears for about 10 seconds and then I get the self test modes. Several reboots later same response as the first time, blue screen for about 10 sec. and then self test mode, just as if I had pressed the OPTION key while booting computer..

RoyE..

I was kinda hoping that there was a web site that had the files for d/l.
I have some of them and a few of the magazines. There are a couple of
sites that have Antic and ANALOG articles and DOMs. I just gathered the
entire set of Z-Mag files. I'm just trying to gather as many of the
files as possible for posterity. I probably won't have time to use most
of them.

Another this is that the main chip inside is socketed. It may be loose.
The board side if the cart is toward the from of the cart. You might try
briskly tapping the front label side of the cart to try to reseat the
chip.. This probably isn't the case, unless the cart has been tossed
around. The dirty contacts is more likely the problem.

Ernest Schreurs replied to me about this, he can't post to news right
now or he'd respond.
What he says is get the cas2wav program from
http://home.planet.nl/(squiggle)ernest.

(That squiggle thingy sometimes doesn't show up right on readers,
It is a backspace or something and just doesn't show up.)

The cas2wav will take the cas files you get from wherever and make
a wav file that you can use to out directly from PC sound card out to
a normal cassette recorder (I don't think you out to a 1010, but maybe).

I think the cas files will work from APE or sio2cas directly.

(confused).

Here's an easier way. Create the display as a picture. If you have BASIC XL or XE or TurboBASIC XL it's easier. Once the picture is on the screen, have the program do a (where "n" is a number if you have multiple pictures to create and save)
OPEN#1,8,0,"D1:PICNAMEn.MIC":BSAVE#1;(DPEEK(88)).This will save the screen as a Micropainter format picture in the current graphics mode. To reload the picture, use OPEN#1,4,0,"D1:PICNAMEn.MIC":BGET#1(DPEEK(88)). This will put the picture back into screen RAM and display it in the current graphics mode. That code was using BXL/BXE. It is a little more complex in AtariBASIC. I've use BXE for so long that I have to do some serious thinking and looking to recall how to do it in AtariBASIC. Doing it like this will save on run time problems, and having to run multiple programs. It will also be MUCH faster for the viewer of the final program.

Ron's CIOV call is very fast from BASIC.
I liked it. BUT, he has CIO$(2,2)=160, which is a LDY immediate.
It should be CIO$(2,2)=162 (LDX #16).

Also, the fifth character should be a lower case 'v' not upper.

Think I'm right here, apologies if wrong. And you need to
DIM CIO$(6) or something. and CIO$(6)=228, I'm not sure what
that'd do. I think it should be CIO$(6,6)=228.

The machine code, after setting up the CIOV block #1 (a 16) as
given (you gotta know the SIZE of your screen in bytes.), when all set to
go is:

```
PLA
LDX #16
JMP $E476
```

It might be easier to just save the screen with PUTS, since time isn't
essential there:

```
10 GOSUB DOSCREEN:REM SET YOUR GRAPHICS MODE AND
DRAW YOUR SCREEN
20 CLOSE #1
30 OPEN #1,8,0,"D:SAVE.PIC"
40 SCREENSIZE=7900:REM FOR A GRAPHICS 8 SCREEN
50 START=PEEK(88)+(256*PEEK(89))
60 FOR N=START TO START+SCREENSIZE-1
70 X=PEEK(N)
80 PUT #1,X
90 NEXT N
100 CLOSE #1
110 GRAPHICS 0:REM TO RETURN YOU TO TYPING.
120 END
```

Hahahahahahhha. I bet I messed up someplace. Anyways.

Yes, a dialup shell account is a direct connection. I se what you are
saying. Lots of people agree with that. However to me the fun of
working with the Atari 8bit is getting it to do great stuff (like
telecommunications) without the assistance of a second machine.

>The only way to "directly" connect the Atari to the net is by implementing
>PPP and TCP/IP, and then writing software that will be able to talk to these

```
Don't you need another parameter to configure how many bytes to save or load?
And TurboBasic is not BSAVE but rather BPUT #1,DPEEK(88),SIZE

In A8 Basic after the graphic is on screen:
OPEN #1,8,0,"D1:MYPIC
POKE 850,11:REM put bytes out
POKE 852,PEEK(88):REM addr lo
POKE 853,PEEK(89):REM addr hi
POKE 856,SIZE-INT(SIZE/256)*256
POKE 857,INT(SIZE/256)
CIO$="hXXLVd":CIO$(2,2)=CHR$(160)
CIO$(3,3)=CHR$(16):CIO$(6)=CHR$(228)
WRITE=USR(ADR(CIO$))

SIZE varies with graphic mode, a full mode 8 screen is 7680 bytes. Retrieving
it is similar after setting the mode and colors:
OPEN #1,4,0,"D1:MYPIC
POKE 850,7:REM get bytes in
POKE 852,PEEK(88):REM addr lo
POKE 853,PEEK(89):REM addr hi
POKE 856,SIZE-INT(SIZE/256)*256:REM lo
POKE 857,INT(SIZE/256):REM hi
CIO$="hXXLVd":CIO$(2,2)=CHR$(160)
CIO$(3,3)=CHR$(16):CIO$(6)=CHR$(228)
READ=USR(ADR(CIO$))

Yeah, you're right on both accounts. It's been a while since I've don
any serious programming. The idea was right though. And thanx for the
AtariBASIC version of what I was trying to say...

sorry, but I would find a way to replace the drawto an plots. Why not
painting an image and load it some lines of code? Using a disk drive
or ramdisk it's probably much faster, than waiting for all those plots
and drawtos.

The program is actually a split screen: GR. 7 with the text window.
That might complicate things a bit. Anyhow it can be interesting to
watch the screen drawing, is not -terribly- slow, and only happens
once.

actually i was looking though them yesterday and it looks like a lot of the
disks i received were multiple copies of the same disk, so maybe there are
only 15 or so actual different floppys, however maybe 4 or 5 of the same one
or something like that. this was the archive of an old atari user group, so
i am assuming that the disks were duped for the club members to buy on
occasion.

thanks
bo

are sega genisus controllers (the 9 pin ones) compatible with the atari 8 bit systems? i know only one of the buttons would work, but some of them are quite nice compared to the old atari joysticks of old.

i bought a standard genisus controller at the thrift store yesterday for a dime and tried it with donkey kong on my xegs, however mario would only walk backwards, not forwards. but he would jump. when i took the controller apart, there actually was a burnt up surface mount resistor. acutally it wasn't even there, just a nice burn mark where it should have been but i am not sure if the controller was like that when i bought it or did the atari blow the resistor.

thanks
bo

How embarassing to find another's typo and the interject one of my own...

The 2nd character in CIO$ must be 162
CIO$(2,2)=CHR$(162)
instead of the incorrect 160 shown, my apologies, and btw you must DIM CIO$(6)
earlier in the code.

```
>In A8 Basic after the graphic is on screen:
>OPEN #1,8,0,"D1:MYPIC
>POKE 850,11:REM put bytes out
>POKE 852,PEEK(88):REM addr lo
>POKE 853,PEEK(89):REM addr hi
>POKE 856,SIZE-INT(SIZE/256)*256
>POKE 857,INT(SIZE/256)
>CIO$="hXXLVd":CIO$(2,2)=CHR$(160) <- change to 162
>CIO$(3,3)=CHR$(16):CIO$(6)=CHR$(228)
>WRITE=USR(ADR(CIO$))
>
>SIZE varies with graphic mode, a full mode 8 screen is 7680 bytes. Retrieving
>it is similar after setting the mode and colors:
>OPEN #1,4,0,"D1:MYPIC
>POKE 850,7:REM get bytes in
>POKE 852,PEEK(88):REM addr lo
>POKE 853,PEEK(89):REM addr hi
>POKE 856,SIZE-INT(SIZE/256)*256:REM lo
>POKE 857,INT(SIZE/256):REM hi
>CIO$="hXXLVd":CIO$(2,2)=CHR$(160) <- change to 162
>CIO$(3,3)=CHR$(16):CIO$(6)=CHR$(228)

>"Russ Gilbert" russg@en.com replied:

>Ron's CIOV call is very fast from BASIC.
>I liked it. BUT, he has CIO$(2,2)=160, which is a LDY immediate.
>It should be CIO$(2,2)=162 (LDX #16).

Russ is quick finding the typo above; 162 is the correct value.

>Also, the fifth character should be a lower case 'v' not upper.

Russ, you missed this one; upper case "V" ascii 86 was correct as printed.

>Think I'm right here, apologies if wrong. And you need to
>DIM CIO$(6) or something. and CIO$(6)=228, I'm not sure what
>that'd do. I think it should be CIO$(6,6)=228.

Either will do; the former just makes #6 the final character in the string...

> when all set to go is:
>
>PLA
>LDX #16
>JMP $E476 <-- should be "$E456"

Another typo; it has to be the CIO Vector at $E456..

>Hahahahahahhha. I bet I messed up someplace. Anyways.

I have to agree with this last statement more strongly than anything else
either of us said!

Yes, usually the Turbo distribution includes their compiler. Btw Happy
Computing was an Atari periodical from Europe, I believe?

No, you boot your XL/XE with Option to disable built-in ROM Basic.

Yes, it can be very useful because it:
Runs all A8 Basic files, and faster,
Includes compiler for even faster executions,
Adds >50 (62 IIRC ?) new convenient and powerful commands for programmers;
there should be a doc file on that disk.

Ron's was a typo.
Mine was how I scribbled "hhh*Lvd" (* and d inverse) in my
DeRe Atari. I shoulda remembered $E456. I used to use this
little routine a lot in my BASIC.
I had X=USR("hhh*LVd",16). I sent the channel as a parameter and
did a TAX after pulling the param off the stack with a PLA.
Uhm. I don't think this stuff will work the way he wanted anyway.
He has a text screen at the bottom. Graphics 7, with text area.
He likes the way it draws the screen. I guess a simple
RUN "D:FILE.BAS" is all he really needed.
It would work, but I don't know how many bytes a Graphics 7
(with the text area) is. I suppose plain Graphics 7,8,9 have a built in
DLI to change display modes. I do remember adding a 16 gets
rid of the text display (GRAPHICS 7+16).

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

Yes, but be careful with 6-button ones, and ones with autofire.
I've stuck with plain, 3-button Sega controllers and they work nicely.

BTW, the "C" button is easily detectable on an Atari. It changes a
paddle signal.

I used it in a game for the Atari 8-bit computer called "Gem Drop."

Sega button "B" is for "Grab."
Sega button "C" is for "Throw."

Dan,

Thank you for crediting me as the transcriber of the PTC article on your website (even though I wanted to be anonymous at the time -- I don't care if anybody knows now). Your site looks great!

However, I'd like to point out that the PTC was a double-sided disk (at least my version is), and the .zip file you have out there contains only one .atr file. Do you possibly have a different version of the PTC than I do?

2678. looking for a program for the Atari 8-bit called 'Sam Program' or 'Reciter'

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-25 03:00:10 UTC
From: stupidhead@pimpstyle.com
Message-ID: <3ae63d66.189225533@news.uncensored-news.com>
Source record: 37153

Is anyone aware of it? I actually have an old pirated copy but I don't
remember the commands to get the thing to work anymore. The program is
a speech synthesis program... it's a machine language program but you
use BASIC commands to get it to talk. Ring a bell, anyone?

Yes that is the Software Automated Mouth (SAM) from Don't Ask Software about 1982. Put your text in SAM$ and do a USR(call to either the SAM or Reciter machine code. Reciter reads normal text as best it can and SAM requires specific syntax for all the different sounds and syllables; it always looks like Bosnian with lots of consonants.

From: twh1@gmx.de
Message-ID: <3ae66441.336384@news.dpn.de>
Source record: 37157

Howdy!

As a part of my homesite - atari section, I would describe a list of really *BAD* atari games. While, everbody talks about "the best games ever", we should make a list of the most faitherbrained, deformed, mindless, softheaded and absurd games.

Okey, there is freeware and public domain stuff availble in raw masses. So we should limit the list to populair game makers (i.e. epyx, english software, code masters, bulldog software and so on).

If you wan't to tell me your worst game ever: give me the full name and publisher. There should be a good chance to find the title in my little archive of about 2500 game disks.

I need at least a short story, why it is so bad to you. Also it would be great to get the story of the game itself. Perhaps this is enouqh manic stuff, which reflects to the whole game :-)

please go, and make a list!!!

cool... I was beginning to think I was the only one who used it! Do
you know how I load the thing? I totally forgot how to operate my
Atari 800XL... it's been sitting around for, like, 8 years or
something. I get it on and load up DOS and both Sam Program and
Reciter are on the disk, but I'm not sure if I remember how to load
them anymore. There is a 'binary load' option from within DOS, but
after I do that with Reciter, I just dont know what to do anymore.
Also, if I do get it loaded do you know what the specific BASIC
instructions are to get the thing to speak? I remember that it uses a
POKE command maybe? Or maybe that USR command? But I don't remember
the specific one. I know that you need to type text into quotation
marks, and then give it some weird system command. To be honest with
you, I dont even remember how to load programs from the ready screen.
I think it's something like LOAD "programname",8,1 or something like
that? or is that the commodore? sorry for the long post... I'm working
on recording some music right now and I want to use that computer
voice... it's much 'older' sounding that the speech synthesis engines
available today... much more War Games.

TIA,
cohryosborne@earthlink.net

Snookie. It was one of the first "pirate" games I ever had - a friend
copied it for me for some reason when I was in 8th grade (this was 1988! :))

It was impossible to control - you had to jump JUST right to make most
leaps. And in the end, there was no ending. Nothing. It just ended.

2690. Re: Launching BASIC Program from BASIC

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-25 15:15:01 UTC
From: Russ Gilbert <russg@en.com>
Message-ID: <3ae72034$0$88188$4c5ecdc7@news.erinet.com>
Source record: 37172

Ron. Probably everyone is done with this, but I appreciate it, it brings me back.

I forgot the ADR in my call X=USR(ADR("hhh*LVd"),16), you didn't.

And right a display list will do the text screen, not a DLI.

I wrote a program to mix modes, just making a custom display list.

I called it 'DLMAKER'. It produced DATA statements and inits that allowed using then by ENTERING it into your program to use the custom DL. I made it after somebody's DLI maker program came out in ANALOG. That program was messed up as published. Someone used a 'Z' or 'N0" for a zero and didn't init it to zero, so it messed up the program as published (The DLIMAKER program).

Well.
what you found is "Turbo Basic XL Version 1.5" from Frank Ostrowski
published by Happy Computer Magazin (german!) and its Distributor Verlag
Markt & Technik. As you see Happy Computer is a german magazin, it has
nothing to do with Happy Computing (who sold the Happy enhancements).
Just a damn similar name...

For the Basic: Here in Europe Turbo-Basic is the de-facto standard
besides Atari Basic (which is built-in into the XL/XE models). Almost
no-one uses the other Basic dialects, like Basic XL, Basic XE, Microsoft
Basic, Microsoft Basic II, Advan Basic, Speed Basic, etc. Maybe this is
different in the US. But I believe, when searching for a faster and
better Basic than Atari Basic, most Atarians use Turbo Basic XL...

Halli, hallo,

Mensch, zur Zeit gibt's ja eine Menge Beitr�ge! But anyway:
what I know about Turbo-BASIC is:
-it's the best and cheapest BASIC for ATARI8 (in germany under 20DM / 10$
because it never was given free, in the rest of europe/world it seems to be
PD, but I don't know really)
-it's 95% compatible to ATARI-BASIC
-runs ATARI-BASIC programs faster
-it more stabil (A8BAS Rev B has crashed often in the direct mode when
entering a program)
-has many, many, many more commands then A8BAS
-has Disk-Commands, so you don't need a DUP.SYS for the easiest things
-it's on many PD-Disks
-full version comes with:
-Turbo-BASIC XL 1.5 interpreter (AUTORUN.SYS 145sec)
-Turbo-BASIC Compiler (COMPILER.COM 80sec)
-Runtime (RUNTIME.COM 88sec)
-some exsamples (*.TUR)
Runtime is needed for running compiled Turbo-BASIC-programs.
Turbo-BASIC is the fastest BASIC available for ATARI's. And the TB-Compiler
is the fastest too. I think in the german version of TB, theres also a fast
manual (but I don't know).

I liked Snokie. However, Jet Set Willy, that's a piece of crap. It has one strongpoint and that's the excellent soundtrack. The movement is jerky, PM poorly designed and here you can talk about shite control.

There is a lot of pretty lame games, but I don't really remember all of them.

Kick Off was bad.

And Rescue on Fractalus, Ballblazer, Miner 2049'er, Mercenary they were utter crap (just joking on the last lot)

Take care and good luck in your hunt for bad games.

Source record: 37167

Well,
I love Snokie !! It has *nice+ graphics and a good animation (ogf the main player/character). It does not have an end - but do classics like Space invaders or Galaxians or Missile Command have an end ??? So, I would not describe a game as bad, especially not an 8-Bit game, because it has no ending (By the way: A.R. - The City also has no ending and many shooter games have no ending. All you need to do is get a big score or Highscore).

Worst Game ??? Well I know many bad games, maybe we should do "flop ten" of bad games ?!? At the moment I remember Battlezone, it has great graphics, but: it is just to easy and thus booaring. All you have to do is search the enemy and shoot it. Only a few seconds later it will re-appear at almost the same place, so wait until that and shoot it again. Do this a few times and you reach the next level. So, it is only hard to find the enemy (and shoot faster than he does) the first time. Later it is absolutely easy. By the way: the Lynx Game Battlezone 2000 included an 8-Bit (green vector-graphic) version and a 16-Bit / 2000 version (filled vectors, 16 colors) version of battlezone. Even the standard 8-Bit like version was much better than the Xe/XEGS cart. you could choose one of three different tanks (which had different abilities), had to search for further ammo and fuel (and thus could upgrade or refill your tanks ammo and fuel) and many other good ideas. The XE version is only boring... -Andreas

P.S.: The VCS 2600 version of Battlezone includes some DLI`s, thus the old VCS version has even more colors than the newer XEGS cart !!

Hi Steven,

I really appreciate your update... I've added your images to the site and
added a note at the bottom in explanation.

I'm not sure if my disk was original or not now. Its got one of those cheap
labels, printed on a dot-matrix, just like my Scanalyzer disk. It could be
that there were different releases of the Treasure Chest? Anyhow... I like
your's better! The disk sector assembler/disassembler thats on the back
side of the disk is really cool.

Thanks, and take care
-Dan

Note to all:
Thanks to Steven, Pirates Tresure Chest now has been updated to include BOTH
SIDES!

Yep, in my own code I normally use the string literal but those inverse bits won't render properly in an ascii post.

btw, if my memory serves, the text window has no effect on A8 Basic RAM organization for the graphics modes. In other words, a full GR.7+16 uses 3840 bytes and a standard GR.7 still uses all of them but only displays the first 3200. I don't recall if the 160 byte text window RAM is still allocated during the full screen modes... Anyway, loading 3840 bytes to the screen RAM in GR.7 will not overwrite the text window and plain graphic modes all use Display Lists but not usually DLI's.

>"Russ Gilbert" russg@en.com remarked:

SAM loads into the same RAM used by the DOS Menu so must be loaded at boot as
an Autorun.sys. You need a MEM.SAV on the disk to go to DOS to "L"oad Reciter
and then "B" back to Basic. After that the syntax is either RUN"D:SAYIT.BAS" or
LOAD"D:DEMO.SAV" and RUN to make it go. You can LIST the code in those programs
to see the USR(SAM) stuff...

Andreas,
It's funny you say AtariBASIC and Turbo BASIC XL were the standards,
because ALL I ever used was BASIC XL and BASIC XE for everything I did.
Most of my friends who used Ataris also used BXL or BXE or Atari BASIC.
TB-XL was MUCH less common around here. BXE seemed friendlier to me than
TB-XL.

```
The latest version of a8jdpeg, the JPEG viewer for Atari 8-bit
computers is now available for download. There are 2 versions of
the viewer available:

* JpegView - the user friendly version

* a8jdpeg 0.6 - has an additional little used save option

The following changes have been made to a8jdpeg 0.6:

- Fixed save to HIP mode bug
- Added MyDOS subdirectory support to directory list
- Pressing the Tab key on the file name prompt fills in the last file
name used

Both are available from:
http://members.nbci.com/rjespino/8bit/a8jdpeg/a8jdpeg.html
http://www.angelfire.com/80s/rjespino/8bit/a8jdpeg/a8jdpeg.html

It was probably just due to timing:

I think the big swell in A8 users hit the colonies 2 to 3 years before it happened in the UK and Europe

The real power users had gravitated to BXL, BXE or Action before TB-XL reached the US; by the time I saw TB-XL I already had utilities and USR(calls to increase speed and perform many of those nifty TB-XL features. The compiler was spiffy but beyond the range of some user group members who had just learned to RUN a plain Basic file.

Perceived friendliness is often a factor of which one you used 1st and longest.

A8 Basic was always defacto to share absolute compatibility with another Atari Computer Enthusiast.

As the subject says, here's what I have:

. PILOT Programming Language (cart only)
. OSS BASIC XL (cart w/ manual)
. OSS Action! (cart w/ manual)
. Chessmaster 2000 (disk, complete)
. Infocom Deadline (disk, complete)

If you're interested in any of the above, please send me e-mail with a trade list or offer (no reasonable offer refused - I need to clean out my room! :)

Thanks!

Joe

I purchased "Software Protection and Code Breaking" from Gardner Computing (linda Gardner) probably about 1983. I remember that I was very disappointed with the information and disk utilities because it presented so very little new information. I wrote them and complained (not that it did any good...) The manuscript/booklet that I have is 34 pages, and has essentially the exact same text as the PTC, but also, it contains a brief description of most of the utility programs which was Chapter 4.

It looks like the PTC is a later version, as they added more programs than the disk I received (mine is one side, only). The second disk side of PTC looks very much like a utility written by C. David Young (CartCopy, Omnimon, etc.). I think it was called DiskScan. There were several disk editor utilities with that similar title. I'll see if I can verify that, but the screen color and the menu certainly "rings a bell."

I liked Snokie. And the version I have definitely has an end which I
found quite cute. By the way I can't remember any problems controling
the little penguin. Although there are control problems with the atr
version I found on the net but until now I thought they were due to
an emulator problem and not a bad pirated version.

Hi Guys,
Can anyone suggest what is wrong here? I've got a 130xe and on powerup
it sticks in selftest more. I've tried attaching another keyboard but to no
avail. This unit did work about a year ago. Has anyone got any clues?

Thanks
Richard

Do you have a copy of it ? I have only the 16K tape version, I do believe it
was a 48K disk version out too. This might contain the ending.

yesterday somebody emailed me this .atr version of snokie. And, well I
think it's a pretty shitty game. It just the sort of game, which has
absolutely noname&nothing character. Just lame and a 5 second quicky.

I'd ensure that all your memory modules & chips were fully seated. Short
of that, let the test run and see if anything just died (memory).

Perhaps it's the connector on your board...I had a similar
problem couple of years ago when a conduit lifted off a board
and connected with another one. This caused my old Schneider to
print the letter E forever...

Maybe it _is_ a problem of a800win. On my 800XL it's sure to be among
the best 10% I tried and at least my wife and my children agree with
me at that. When I think of really bad software, games like LA S.W.A.T
and Carnival Massacre would be on top of my 'hit' list.

I planned to activate my 800XL one of the next days. When I do that
I'll check the old snokie disk and maybe compare the playability to
that of the atr I'm sure I made of it. But as to the ending of the
game I'm sure to remember it because I liked it much more (great
music !) then e.g. the ending of spelunker which was a nice game
but with a somewhat meager ending.

Hmmm..I mailed you it and tbh I think you and Bill are going OTT.

Sure, it's not a winner of awards but it's typical of the time, ie its
a pixel perfect jumping game with no real ending.

If you listed games that came into the same criteria with similar
gameplay then you best have a big bit of paper. I certainly am not
trying to make a fairly average game into more than it is but methinks
people are not playing the game as if you were around at the time of
it's release, at the time I saw quite a nice looking game that sounded
ok but was a tad tough.

I can't stress enough that if you were an Atari person at the time of
many games releases that they looked like bloody miracles of
programming yet today we frown upon them because we have seen so many
changes which spoil the way we view older games.

Just a thought..

I can't think of any, there are a few C64 sites like the Blue Ribbon
site with nice MOD's on but no Atari specific places.

Also, it's worth taking into account that Robb made very few tunes for
the Atari (5 or less I think)

If you fancy meeting the great man then he will be in the UK either
next month or June at a Back in time C64 event along with a few other
C64 greats. The only thing is that if you have ever met him or heard
him speak he comes across as a very quiet man who hates being in the
limelight.

What made the Atari port so interesting as a two player game
was it's poor programming. When facing the opponents missile
one could try to run towards that missile and hope the missile
would go "right through" the player. This incorrect collision
detection actually added an element of randomness to the game
the C64 version (I have the cart here) does not have. In hopeless
situations one could always try this trick (running towards
the firing oponent) to ecape without loosing a life. When the
opponent's missile went "right through" you and still had some
way to travel the opponent could not "reload" and fire at you
again. Thus if you were firing now, he as well may end up in a
situation requiring to run towards you, hoping that missile
would go through him as well. So the players could end up running
towards each other firing. Passing through also happens with
missiles fired by monsters.

A reproduction of this effect would be nice.

Bye

Frank-Oliver

Are you referring to the original Atari 8-bit port? In that game, you are correct. Poor collision detection redulted in some strange effects, as you decribed above. If one were to make a Wizard of Wor port more faithful to the original, that would have to be fixed. Also, the intent of Wizard of Wor as a two player game was to promote team playing. In this case, the poor collision detection would result in the players sometimes actually killing each other when their shots failed to cancel on each other, instead, the shots would go through each other, and each Worrior (Worlord, if you got that far) would die.

An interesting note about the real game:
Hots collision detection was determined by the missile actually hitting a colored pixel of whatever it was shooting at. two items (monsters, for example) that had the same colors overlapping, would be BLACK where both items had the same colors. However, the game detects whether a monster had killed a Worrior/Worlord simply by comparing the coordinates of the monster and the Worrior/Worlord. There are cases when two identical monsters are travelling in the same space with their animations in synch, causing them to disappear completely from the screen (no pixels activated) so that your shot goes through where they should be, but the INVISIBLE monsters kill you.

Who said life was fair? ;)

Bill

If you want to learn most of my tricks for the arcade version, (some are reserved for the "master," heh-heh) go to:

http://www.klov.com/W/Wizard_Of_Wor.html

My friend posted most of the cheats and tips there. Of course, ALL of these tips/cheats apply to the MAME emulation as well.

CLASSIC GAMING EXPO 2001 SHOW DATES ANNOUNCED;
"FATHER OF VIDEOGAMES" FIRST TO SIGN ON

VALLEY STREAM, NY (April 27, 2001) -- The organizers of Classic Gaming Expo have announced the dates of the 2001 show to take place at Jackie Gaughan's Plaza Hotel. On Saturday, August 11, and Sunday, August 12, the computer and gaming industry's most innovative pioneers will gather in Las Vegas to attend Classic Gaming Expo 2001. Dubbed CGE2K1, the fourth annual event is inspired by a strong, continued commitment to classic game updates and re-releases by such major publishers as Infogrames, Midway, Namco, Activision, Konami, Capcom, and others.

Heading up this years line-up of industry pioneers is none other than the "Father of Videogames" himself, Ralph Baer. "Mr. Baer has been a mainstay of Classic Gaming Expo with his unwavering support. His foresight and innovation are what started the videogame revolution and he's always willing to share those experiences with our guests," said Sean Kelly, co-promoter of Classic Gaming Expo.

Last year, Baer allowed audience members to play with his prototype "Brown Box" which eventually became the Magnavox Odyssey - the first home videogame system ever. In addition to the Odyssey, Baer was the mastermind behind the Coleco Telstar Arcade, Milton Bradley's Simon, and the Coleco Kid Vid peripheral for the Atari 2600. Mr. Baer has created many other products and currently has over 150 patents in his name worldwide.

"It's an honor to participate in an event that recognizes the pioneers of the videogame industry," said Mr. Baer. "Classic Gaming Expo offers me an opportunity to meet with some of my old friends as well as hundreds of videogame enthusiasts. I'm looking forward to sharing more of my experiences and to again show the 'Brown Box' prototype at CGE 2001."

Although the "Brown Box" prototype is the centerpiece of the CGE museum, it is accompanied by literally hundreds of other items including many one-of-a-kind prototypes. The museum contains the largest public display of classic game hardware, software, and memorabilia in the world. "What makes the Classic Gaming Expo Museum so special is the fact that it's comprised of items belonging to dozens of individuals," states co-promoter John Hardie. "This is not just a single person's collection but rather a grouping of items on loan from enthusiasts as well as many of our distinguished guests."

Aside from the numerous keynote speeches by various industry legends throughout the show, CGE 2001 will play host to a large number of classic videogame vendors and exhibitors. While many of them will be selling mint-condition hardware and software from the days of old, others will be presenting new products for sale for systems such as the Vectrex, Odyssey 2, Colecovision, Intellivision, Atari 2600, Lynx, and Jaguar.

Other show highlights include various classic console game stations, tournaments, raffles, door prizes, and an incredible number of classic coin-operated videogames, all set on free play for the attendees.

"We're thankful for the on-going support and interest shown by the videogame industry," notes co-promoter Joe Santulli. "We feel it's vital that the history be preserved for generations to come.

Now in its fourth year, Classic Gaming Expo remains the industry's only annual event that is dedicated to celebrating the roots of electronic entertainment; bringing together industry pioneers, gaming enthusiasts, and the media for the ultimate experience in learning, game-playing and networking. Classic Gaming Expo is a production of CGE Services, Corp. (www.cgexpo.com)

: would not describe a game as bad,

There's a different between "never-ending" (missile command, space invaders,
etc.) and "no ending." In the latter, you get to the goal and the game
ends because you can play no further. If it had an 'ending' (I guess I mean
"ending sequence") one would feel less empty after fighting with the horrible
controls the game had. ;)

: Worst Game ??? Well I know many bad games, maybe we should do "flop ten"
: of bad games ?!?

Hehe... Snokie was the 1st to come to mind. I think maybe my problem at the
time was I only had a few commercial games (Q*Bert was the only game cart.
I had for _years!_ The only other carts I had were Delta Drawing and BASIC
(the _bad_ revision >:^{)

<snip>
: P.S.: The VCS 2600 version of Battlezone includes some DLI`s, thus the
: old VCS version has even more colors than the newer XEGS cart !!

2600 Battlezone was beautiful. :) In looks, it was up there with
Enduro. (It had subtle, more realistic colors, unlike lots of the
Imagic games - they had lots of DLIs and were sharply colorful... chrome-like,
really. But they were different kinds of games... outerspace, mostly)

I disagree! Ballblazer was smooth, fast, and fun! Very simple, and very beautiful.

RoF is a bit tough, but at least it wasn't overly complex like... umm... the other 3D fractal-based game similar to RoF that Lucasfilm came out with whos name I can't remember. (There's also that one with Dragons played in caves, also from Lucas. That's a bit hard to play, too.)

I'm surprised that Matterhorn by Tigersoft hasn't been mentioned yet.

However games like that, when attacked by a large group of drunk people at a party strangely drift into a 'so bad it's good' category.

The truly bad games are the ones that really set themselves up to be excellent with superb graphics and sound, only to fail due to spectacularly sod-awful and contrived gameplay. My nomination:- Astrochase.

No matter how drunk you get, no enjoyment can be derived from this game whatsoever.

Uhm.
Use any of the emulators with BASIC installed. Have room on
a image for a LISTed file.
Load the Atari BASIC file, then list it to DOS 2.5 or MyDOS
disk image.
I guess you can use emulator to write directly to hard drive, I
don't know how, never used it.
What I do is then use 'imageman.exe', a program for PC that
manages DOS 2/2.5/MyDOS images, and extract the LISTed
file to hard disk.
Then use my or someone else's ATASCII to ASCII translator
(mine is available at http://www.en.com/russg under the area
for Assembler Editor stuff.

For the Turbo BASIC, you'd have to load TB into an emulator and
do the same NEW, LOAD, LIST procedure. I'm not sure
TB works on emulators.

One slight problem is ATASCII inverse characters won't show up
right. I don't remember if my ATAS2ASC program converts
inverse to non-inverse or not.

I have a related question that someone probably knows the answer to. There were several inexpensive disk games released in the U.S. in the late'80's. These were sold in discount stores, book stores -- as "rack jobber" merchandise. Do these sound like "Code Masters" games? The ones I saw were Basic or compiled Basic. Quality was typical of most Basic games... I pretty sure that the name was "(something) MASTERS".
Anyone recall these?
Larry

2742. BASIC Code > ASCII

Message-ID: <3ae9703a.7301004@news.demon.co.uk>
Source record: 37064

Dear All,

I'm not new to Atari 8Bits but this is something i'd like to be able
to do.

I have loads of old BASIC and TURBO BASIC XL programs that i'd
like to be export to standard TXT/ASCII files and then view in NotePad
on my PC or Printout.

I have the following ;

Hardware ;
ATARI 130XE
ATARI 1050 Disk Drive
SIO2PC Cable

None of this is currently setup, been meaning too
since I moved house 8months Ago !

Software ;

All my Single & Enhanced Disks in ATR Format on my PC.
All BASIC Programs are sat on Disks on ATARI DOS 2.5

Emulators ;

AtariWin800
Xformer 7
XL-It

I was hoping there would be a way of using an Emulator to just copy
the individual files to the PC's Harddisk. In AtariWin800 I can setup
a Directory as H1: and copy the files to it but they are not in ASCII
format.:-(

Any help is greatly appriciated.

Mark

Hi Mark,

> I was hoping there would be a way of using an Emulator to just copy
> the individual files to the PC's Harddisk. In AtariWin800 I can setup
> a Directory as H1: and copy the files to it but they are not in ASCII
> format.:-(

Don't save them with SAVE "H1:PROG.BAS", use LIST "H1:PROG.TXT" instead,
this will give an (ATASCII) dump of the file. Next step is a tiny program
that changes all EOL (0x9b) into CR/LF (for PC) or LF (for Linux). Don't
know how to do this under windooze, but under Linux, check the manual
page of "tc".

Another idea would be to use the build-in printer emulation of some
emulators (which might include the character translation already). Then,

LIST "P:"

should do the job.

So long,
Thomas

You could also use my utilities ADIR (extracts individual files from
disk image files) and CHKBAS, which is able to 'decompile' BAS files.
Has a slight advantage over Thomas' solution, because it could also
decompile 'unlistable' programs. Works with both Atari Basic and Turbo
Basic.

Both programs run under DOS (32bit) and were tested under Windows.
Sources are available to compile them on any other GCC-compatible
platform.

Greetings all!

Well, I have put my TT030 to good use, installed Linux on it, wrote
a new BBS program for it and connected it to the net.

Check it out by telnetting to jybolac.dyndns.org on port 520. Here
is the URL as well: telnet://jybolac.dyndns.org:520. You will be
logging in to my TT directly.

If you would like to join the BBS, log in as user 'new'. I am still
working on several of the features, like allowing the user to define
preferences and menu styles, but I would like to open it up to
everyone. And, all comments and suggestions are welcome. Since I
wrote the software myself, I can change anything easily. I am
hoping that the software will work under MiNT as well as Linux, but
that has not been tested yet as I don't have MiNT.

Thanks,
Chris

As long as we're talking about endings, did anyone finish Shamus and see
the "special ending" the docs promised? I used to play that game a lot,
and probably got pretty close to completing it. As I remember however, it
was a 400/800-only cart, and when I "upgraded" to an XL I couldn't play it
anymore, and lost interest. Now that I have several 400s and 800s,
maybe I could once again try to finish it!

Code Masters mostly program in ML i think. Maybe not that Fruit Machine thingy. BMX Sim and those were not Basic, that's for sure.

Hope I didn't miss your sarcasm there, but I did say, I was joking on the last lot. Those are totally brilliant games and I did like The Eidolon and Koronis Rift too. Lucas did some excellent games, but nowadays, I don't know.

I thought it was just that it has a high difficulty level. The
graphics in Amaurote are magnificent.

My vote for worst game goes to a program whose name I can't recall. It
was published by Artworx, and was featured in one of those detailed
and verbose Artworx magazine ads. In this "game" you would fly your 3
pixel space ship around a large area, and shoot at robots. The game
was distinguished by the crude graphics, and that it was incredibly
slow.

Rich...

Though I don't know your exact setup, I persohnally have had this problem over and over throughout the years. For me, it was always the IO connection to the floppy drive. I simply reseated it until I got a good boot. Nothing else ever caused this problem, for me. Good luck.

To load a Basic program from disk, you type LOAD "D:FILENAME.BAS" at
the READY prompt. The ",8,1" was only for Commodore.

XL-It will let you LIST those files directly to a HD subdirectory, but they are still in Atascii...

Go to Ken Siders' page:
http://home.columbus.rr.com/ksiders/atari.htm
about 40% down the page and get his W95 AtrUtil v. 1.13. It can import or export and view both SAVEd and LISTed Atari Basic and Turbo Basic files from Dos 2.0/2.5 or MyDos images.

2 caveats:
The inverse and the Tab, Clear, etc. characters plus the control graphics will not all translate readably to ascii AND it seems to stumble on 2.5 dual/enhanced density images when the files get past sector #720. You may need to move files to a standard 720 sector DD image in you emulator.

> mark.elliott@mmt-ds.com (Mark Elliott)

>I have loads of old BASIC and TURBO BASIC XL programs that i'd

Experience is something you don't get until just after you need it.

2761. ICD MIO Hardware/Software Upgrades??

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-28 01:13:34 UTC
From: phantomm@bellsouth.net
Message-ID: <2PoG6.3826$5b1.253848@news1.atl>
Source record: 37085

Greetings,

Does anyone know if there are any Hardware (do it yourself) upgrades or enhancements for the ICD Multi I/O (MIO)?

And what was the latest version of software used to setup/partition a hard drive for use on a MIO?

Is there more than 1 software program to setup hard drives on the MIO?

I'm also interested in finding out what other Brands and Models of hard drive Controller Boards work with the MIO. I have used the Adaptec 4000A Controller Board which allows those old MFM type hard drives to be used (IIRC).

Are there any controller boards that will allow 3.5 or 2.5 IDE hard drives on the MIO?

Are there any controller boards that allow SCSI 1 or SCSI 2 hard drives to be used?

Since the MIO has a 50 Pin hard drive connection, are there any 50 pin SCSI hard drives I can just plug in and use without a controller board?

Has anyone tried using a SCSI ZIP drive, SCSI CDROM or other devices with the MIO?

I'm especially interested in any special software created for the MIO for using modern hard drives and other devices and getting rid of the 16meg partiton limit if possible.

If you can provide me with any info on the above then e-mail me at phantomm@bellsouth.net

Thanks in advance

Just a little side note... You can print/view ATASCII files in Winword
using the Atari Classic TTF fonts. It works great! The fonts even have
most of the inverse characters and some of the control characters.

Several Win apps allow you to work with those A8 fonts; trouble is that most of the inverse and control graphics characters are no longer at the same ascii numbered location in the font and you do not get exactly what you expected.

Is there a way to rearrange the font order?

> Robert S Ely rsely74@optonline.net

I think changing the keyboard does not help. I've tried to put an 130XE keyboard into my 800XE (because I cleaned it some months ago) but it didn't work. My be that the keyboard have changed.

But try this: while turning on the computer, press the START button. Then you tell the computer, that you want to boot from a tape. The computer prompt with to beeps. If this doesn't happen, your computer seems to be damaged.

Mirko

From: Mo <mygranny@swbell.net>
Message-ID: <njCG6.18$XC6.15850@nnrp2.sbc.net>
Source record: 37091

It also depends on how the program was saved, for instance:

If it was

SAVE "D1:MYFILE.BAS" you would-
LOAD "D1:MYFILE.BAS" or
LIST "D1:MYFILE.BAS" you would
ENTER "D1:MYFILE.BAS"
and there's another way that I can't remember right now, I just woke up.

Heyas -

I'd cast my vote for anything from a company called "General Masters." They made half-a-dozen or so games for the Atari 400/800. I don't know if they even ended up in stores (God, I hope not), but nonetheless, for the sake of completeness of my collection of games, I ended up with them.

They are by far the worst pieces of garbage I have ever seen on any computer system (past and present). Three titles that come to mind from them are "Eldorado", "Barge", and "Panic". They are so awful that they make some of the original Cosmi games look like Ballblazer or Alternate Reality.

I don't know what this company "Mastered" in, but it definately was not game design or programming... In my opinion, they not only win the worst game(s) award, but also the worst company award. At least they are consistent. :)

Yes, Maple Ridge, British Columbia. (which isn't on my maps!) I have ROM issues 4,6,8,9. They are from 1984/5, with the feel I suppose of 1982/3 Antic, though not as big. I'd be happy to end up with more issues! Anyone know how long it lasted?

>
> phantomm@bellsouth.net

Well just a guess that the limit comes from the fact that there are two bytes in the SIO header to select the sector number, and then 256 bytes per sector max.

256 x 256 x 256 = 16777216 = 16Mb

I don't know the ICD MIO well enough to know whether it uses the SIO.

Sort of a combination; definitely not MIO hardware. 16 MB is the maximum you
can access as a single chunk at 65536 sectors of 256 bytes.

It's not SIO so much as the disk operating systems - MyDos and Sparta Dos
are both limited to two-byte pointers for sector numbers. That's 65536
possible sectors. They are also both limited to 256 bytes per sector (as
above).

In theory, since the sector size is an adjustable 2-byte pointer on xl/xe
systems, we could have sectors up to 65536 bytes. In practice, I think
16384 bytes would be a more realistic limit - that's a single bank of RAM
in most switching schemes.

That would give us 64x the space, or 1024 megs per partition. Anyone feel
like re-writing the DOSes?

2786. atari vs commodore!!

Newsgroup: comp.sys.atari.8bit
Date: 2001-04-30 13:56:28 UTC
From: bo snyder <bobo_snyder@hotmail.com>
Message-ID: <B712BD1B.1E2C%bobo_snyder@hotmail.com>
Source record: 37010

nahh.. i am not really comparing the 2, i know what the answer will be here. LOL

i am just wondering if there are any Bi folks here who swing both ways and are into both commodore and atari.

the reason why i ask is because i have a bunch of commmodore stuff (2 old style 64's and one new style 64 (and a old style parts 64, and i have torn it apart and put it back together and i am pretty sure it is not a "reseat the chips and it works great again" fix), a few games carts, 3 1541 floppy drives, a okidata printer with commodore interface, a standard centronics printer interface for commodore, and some sort of a cheetah sound speaking cartridge and all the cables) and i am not a commodore man. one of the old style c64 is fully boxed and still has the warranty card (unfilled out) and power play mag signup borchure and the owners manual (the box has very minor shelf wear but no rips or tears or tape holding it together) and i also have a koala pad for it too (with the koalapainter cart coming, needed to get that so i could test the koalapad).

anyway my question is this: is there anyone out there who would like to trade for some atari 8bit stuff for this commodore stuff?

also i have a apple 2GS wozinak edition complete with 4 floppy drives (2 5 1/4 and 2 3 1/2) and a apple 2c if anyone is interested in that and some mac SE's (none of the 128 or 512 models though, so don't ask).

btw all this stuff seems to work fine as tested.

well i don't mean to spam, but i want more atari!!

thanks
bo

There is an Eastern Front .atr file at:

<http://www.pullmoll.de/mess/a800/images.html>

It is a good way down the page, and it is in a file called "easternf.zip".

2797. Paddle Question!

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-01 09:25:25 UTC
From: William Kendrick <nbs@bolt.sonic.net>
Message-ID: <9ivH6.610$po.17592@typhoon.sonic.net>
Source record: 37021
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari

I have a question about Atari paddles. I have a pair of paddles.
I'm not sure exaclty _how_ good a condition they are in, but I remember them
working quite nicely with my 2600, last I tried.

A friend of mine has built (most of) the adapter for hooking paddles
to a PC joystick port. (As found in the documentation to "Stella," the
Atari 2600 emulator.)

When I've tested the paddles, I'm of course getting values back between
-32767 and 32767 in my program. (This is under Linux; I'm using libSDL, BTW)

What I'm noticing (especially with one of the two paddles more than the other)
is that the positive values jump in the thousands, while the negative values
in the hundreds.

In other words, on one side of what the PC sees as the paddle's center,
the resolution is quite low. On the other side, it's higher.

Is this simply an artifact of Atari paddles? Is there any kind of math
I can do to the input being received to make it smoother as the knob is
turned?

I've tried just dropping the (15 or 20) values that come back on the
positive side, and translating the (80 or 100) values from the negative
side to map to screen positions (in my Kaboom! clone, "Mad Bomber"), but
it's still a bit twitchy, to the point of the game being unplayable at
a certain point.

Or, is it simply a sign that my paddles are going bad? :(

Any tips greatly appreciated!

Thanks!

-bill!

I see Tutankham made that list. Was it sold in Europe as a cart or disk? It was not sold in the US, except a version sold by Antic as King Tut's Tomb, but I don't think that was the same game.

Hi. I've been trying to track down a game I played years ago and *know*
isn't just a product of my imagination. The game was called (I think)
"Poker Party", and I think it was done by Dynacomp.. it was a Basic game
where you played poker against a group of opponents with different
playing styles.

Does anyone know where I can find this?

Hi,

Is there anybody who can send me a copy of the original disk of this product and an image of the Turbo-816 OS? Or somebody who sell me a working Turbo-816 would be great...
I need this because I want to make the final test on my 816 board and I know Dataque made macro's for Mac/65 to support the new processor, I also need the OS to look if this is a usefull OS for my development or that I need a completly new OS. I want to take a look at it because I don't want to invent the wheel twice... and this can help me to use my free time to do more development at the board...

Gtx,
TXG

I would guess that this is normal as the paddles use to my knowledge
"pos log", i.e. logarithmic potentiometers. This means that the resultion
is (naturally) finer on one side than on the other. If the PC wants to
compensate for the logarithmic dependence, errors of the same magnitude
get more relevant on one side than on the other, so I would guess that
this is really "a feature".

So long,
Thomas

I have the Parrot sound digitizer that uses Joy2, it resembles a paddle but
it's basically a gain control with a mini jack for microphone input. It
won't even work on my XL, I think it requires an XE for more memory.
The software disk has a sample of Michael Jackson singing 'Beat it'.
That was good for a laugh..

The program and hardware is called the Antic Sampling Processor and was
in the February/March 1990 issue of Antic. Try at the following address
for the article, pictures and schematic. Some sample sound files are
there too. Go to:
http://www.atarimagazines.com/v8n8/anticsamplingproc.html

I have a disk image of a game called "Poker Tourney" that sounds like
it might be the right one. You play against six other players named,
"The Man", "Cincinnati Kid", "Shifty Pete", "Stone Face", "Ugly Fred"
and "Dapper Dan".

If you want to take a look at the image, let me know.

Howdy folks

I checked out my 800XE and found something new.

The 600XL, 800XL, 130XE and north-american 65XE all seem to buffer the Phase zero clock, but not the GTIA select line. (old knowledge)

The XEGS doesn't buffer the phase zero line, but it does buffer the GTIA selct line. (I discovered that some time ago)

The 800XE and probably also the european 65XE (but maybe not those 800XE's and 65XE's that use 'one bit' RAMchips (as in 64 by ONE)) buffers both the Phase zero clock AND the GTIA select. (that's the new thing I found out)

Anybody know more about this?
Could somebody please see/check if this has any influence on the bus timing?

Thanks in advance

CU Mathy van Nisselroy

Hello folks,
searching for a few Atari Jaguar online mags, I finally found JEO and AEO. Believe it or not, the AEO mag came from Atari itself (1992-1996/97) and the first online issue stated, that AEO had its first appearance in 1982 as an A8 online or BBS/mailbox magazin. So now, I am not searching the AEO mags for Jaguar, instead I am searching for the much older AEO mags from the early 80`s. Anyone got these A8 mags of AEO ?!? Perhaps someone who is/was running a mailbox ?!? -Andreas

I would appreciate some input on what the cheapest and/or easiest way to hook a hard drive up is. I already have an SIO2PC, but I would like an actual drive set up. I don't care if it's scsi or ide or if I lose half the capacity of the drive due to the 512/256 thing. As you can guess I'm kinda new at this, but willing to learn so please spell it out.

Thanks in advance,

Hmm, I seem to remember seeing that in an issue of Monitor (not got the
8-bit mags here, so can't check which). There were comments that it only
worked on the 400/800 though. Not sure if that is a hardware or software
issue though.

Well, there's the Black Box from CSS. If he has the parts to make them or some in stock still. Check out:

www.nleaudio.com/css

With this device you can use SCSI drives. Depending on the type of SCSI drive you use, you will need a controller card. You can use older RLL/MFM(? is that what they are called?) type drives. Check the postings here from the last week or two, William Moeller had a few Adaptec 4000a controllers that will work with these type drives for sale. Then there are the Seagate STxxxN series drives, which have an embedded controller. With these you only need the Black Box and the drive and power for the drive. You could use an external SCSI drive case or a PC power supply. I have a Seagate ST125N drive that I have used in the past. I have a Seagate ST225R (I think it's R) attached now with an Adaptec 4070 controller card. CSS could possibly set you up with a complete hard drive system with Black Box, drive, and controller card. I don't know if they still do that now but they used to. I got the controller card I'm using from them about a year ago or so. You can also get the Black Box with an optional floppy board installed. With this device, you can hook up standard PC type 5.25 and 3.5 floppy drives in either 360K, 720K, 1.2M, or 1.44M flavors. I am very happy with my Black Box. Haven't had any problems with it. Well, no problems that were CSS's fault anyway. I fried my floppy board :(. But the hard drive interface still works fine.

There is also K-Products(?). They also sell a device that you can use to attach a hard-drive to. I don't know if they have a website or not. Don't know much about their product.

There are some 'home brew' IDE type devices. I have no clue how well they work or where to find information for them. Someone will probably come along here and provide that information. I think there was an IDE device that was produced by a company too. I believe it was in Germany. Don't quote me on that one tho! :)

There are lot's of solutions. I couldn't tell you how cheap it is to make a home brew IDE device but I suspect it would be MUCH, MUCH cheaper than buying a Black Box. Those are around $200.

Hope this helps and I didn't mis-inform too much. :)

Hi Chris,

I've been trying to get through, using HyperTerminal and setting it to the proper port. I can never seem to do it, though. What are the BBS hours? Is there a chance that I'm doing something wrong?

2821. Announcing the BadSector"A" Project

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-02 23:49:16 UTC
From: Gary Morton <gary@alma.demon.co.uk>
Message-ID: <3AF09D0B.EAD1AB4C@alma.demon.co.uk>
Source record: 37045

For the past few months I have been working on a project to connect an IDE drive (I have several "old" drives which are spare) to my Atari 800 (or 130XE) via the standard SIO bus. I hope to transfer the programs from all the floppy disks which I have accumulated (as friends have got rid of their systems). I intend to make some kind of multi floppy disk emulator.

I now have the hardware working and can emulate a single density floppy disk drive.

I have named the project BadSector"A" and I have been keeping a diary of my progress. Web pages giving schematics and source code (GPLed) can be found at http://www.alma.demon.co.uk/Atari/AtariProjects.html.

With the help of the people in this newsgroup I hope that I can develop this project further. There is still plenty to do!

The first thing I need help with is to choose which DOS to use with this system. I need to use one which is really in the public domain. It needs to support hard disk drives, needless to say. The only reason I am emulating a floppy at the moment is that I am restricted by the standard DOS (I'm currently using SmartDOS) as to what I can format and then access.

Also please let me have some feedback on the web site. I'm not very good at HTML or web page creation! I'm much better with hardware ;-).

have fun...

Hello All,

Everyone remember this game? I had a ball with it and now want to play it again. I have an ATR image file of it and converted that over to a DI image so 800XLDJ could use it. I also have the original disk version which still loads. I have found out that this game will not load into an 800XL or 130XE unless the Translator disk is run first. But then even after that reading the scrolls in the game is impossible. The readings flash for a second. I am thinking I need to get out my old 400 and play it that way, but I would rather not. Has anyone experienced this and found a way to play it fully on an 800XL or 130XE?

Or you can find an ICD MIO and a SCSI drive (or SCSI controller and MFM
drive) and go that route. The MIO and Black Box are similar in function,
but it's probably easier to get a Black Box than it is an MIO.

Don't know about 48K. When put to file the version I played has
about 18K. There are at least 5 scenes (that means I didn't get
beyond the fifth one when I tried it last weekend) before the
ending. So there are (at least) the following :
mountains, river, cave, underground lake, laser gates, ? , ending.
Is that, except the ending, the same on your version ?

I remember someone on this group posting an IDE hard drive project for the 8bit. They also mentioned using a compact flash memory card instead of a hard drive. I lost the link to their site but I sure would like an update. As for the DOS I think I would use MyDOS 4.5, I could be wrong but I think it allows for unusually large disks. Let us know how it comes along! I usually just pretend that my old 486 with SIO2PC is a vaporware atari hard drive that no one knows about <grin>.

use telnet, not hyperterm. telnet to that address and you should then be
able to get on. also make sure that you are online and connected to the
internet before trying to telnet into the bbs. and if you are connected to
the internet, make sure that telnet ports are not being blocked if you are
at a company or school.

2829. indus gt drives.

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-03 12:28:14 UTC
From: bo snyder <bobo_snyder@hotmail.com>
Message-ID: <B7169CEE.2003%bobo_snyder@hotmail.com>
Source record: 36953

hi everyone,

well it looks like i bought a rather non-working indus gt drive.

basically when i plug in the power pack, (it is an actual indus power pack) the drive powers up and spins up (i hear the motor running), and 2 of the led's light up, however the 2 digits do NOT light up at all, just the 2 led indicatiors. anyway when i try to boot to this drive, it will NOT boot to it, the atari just turns on, makes the 3 second long quiet farting sound (the sound an atari makes when it boots with no sio devices attached is what i mean) and then just goes to the menu prompt.

i have double an triple checked the jumper settings in the back of it.

i have tried making my new indus gt a second drive connected to my primary indus gt drive, but the second drive is still not being recognized.

i have opened the drive up and reseated ALL the chips (on both the upper board and lower board) and reseated all the wire connectors, but still nothing.

does anyone have any other ideas i might want to try/checkout?

one more thing which i feel is rather odd, i now have 2 indus gt drives but the weird thing is the powerpacks. one of the powerpacks says on it "future domain for indus gt drive only" and it runs at 9.5volts dc at 1.95 amps, but the other power pack says on it "indus gt" and it looks differently, (both have same connector) but this one runs at 11.5 volts dc at 1.95 amps. whats the deal with that???

thanks
bo

No ports blocked that I can see. I get to the Internet from home using a cable modem. I am running a firewall, but AFAIK it doesn't block ports without throwing up a warning.

The way my machine is configured in Windows 98, HyperTerminal is the default telnet client.

I'm going to try it in Linux when I can.

i acutally didn't realize that you could use hyperterm as a telnet client.
i always thought of hyperterm as being like an old terminal program that you
would use the serial cable or modem with.

have u tried shutting your firewall down completely then trying to logon to
the bbs?

Alan,

This may actually be a problem with _my_ firewall. Please send me the IP
address
of your cable modem, and I will make sure that I am not blocking that address.

Oh, and the BBS is up and running 24/7, so hours would not be a problem.

Thanks,
Chris

hi edward,
yes i remember that game, i wish i still had it for sale today.
it is a fun game, not only role playing wise, but the interjected
comedy is cool that adds to the pleasure of the game.
there was a rereleased version of it that was for xl models, it did not
sell to well because by the time it was rereleased, most pirates had
already made it widly available, so that version never got to far in
many stores, it is hard to find.
thanks,
lance

Yes, This is the one I remember reading about. I have the article and the software here somewhere. The Antic article may have been reprinted in an issue of Start too, but not sure on that. I have tons of STart mags and a few Antic mags with disks.

I remember using the Antic software to plays some tunes on the 130xe years back.

Not sure which would be the cheapest route, I have experience with the
ICD Multi I/O which came in 256K or 1 meg versions. You can use the
Adaptec 4000A Controller board to run MFM and probably RLL hard drives.

Someone reading this group may have a complete MIO setup for sale or a MIO
by it's self.

I have seen advertisements in electronic mags for those Adaptec 4000A boards.
The run around $15-$25 dollars.

Even if you don't run a hard drive on the MIO you can still use it, as it
includes a printer port, RS232 modem port up to 19200 Baud and you can setup
several Ram Disk(s) or 1 great big one. It also allows setting up a printer
spooler of your choice of memory size.

I did have my 1 meg unit up for sale awhile back which included everything
one needed. But have decided to keep it. It's in storage right now but I
will be setting it back up soon.

Hopefully someone will write some software that will allow me to connect it
to the Net. If that happens, I'd have it set back up very quickly! 8-)

I've heard good things about the BLACK BOX and would mind having one myself.
But I don't have any experience with it.

If you happen to get a MIO and need some help, advice or whatever then give
me a hollar and I will try to help ya out if I can. There are others here
that know the MIO as well.

BTW, I've seen the MIO manual on a FTP site awhile back. Maybe someone can
give the URL. That way you can read up on the MIO and see if it would suit
your needs/wants.

FamilyNet Newsgate

For those that are in the Dallas /Fort Worth area, we will be having an Atari house party on Saturday the 5th. For those slightly out of town, this is a good time to visit Dallas for the First Saturday Sidewalk Sale in the early morning and then come by for the house party JYBOLAC (Just Your Basic Online Atari Computer) is having. If you want further details, write me at:

drclu@swbell.net

Look forward to hearing from you,

Doctor Clu

PS: If you have friends of other 8-bit platforms, they are welcome to attend as well, though the theme will lean more towards Atari.

Hi Guys,
Ok some more information on the XE problem. I've noticed that the power
light on the keyboard isn't on
when I turn the unit on. It seems to me that either the keyboard connector
or the keyboard it'self which is dead. Does anyone have any other
suggestions to how this can be resolved or should I give up and get another
from E-Bay :->

Cheers,
Richard

Click for
Atari WebSite Specials!

Check the HotLink above for my Atari specials on Panasonic Printers & 1050 Disk Drives. Also Check out my Atari Catalogs! I'm buying Atari overstock from Atari Dealers including +NEW in BOX Games for Atari Jaguar, Classic Atari 8 Bit Game Software such as LucasFilm Games Plus MICROProse's F-15 Strike Eagle and Silent Service Plus I'm adding 810 Happy Drives rev.7 and True 360k DSDD XF551 Drives. & NOW I'm offering a 20% Tax Relief Discount. E-Mail me for Details on Redeeming these offers! I'd like to say Thank You for letting Bravo Sierra Computers Support you & your Atari Needs. Haven't bought from Bravo yet? Give Ben a Chance! I can be quite Beneficial. And if you can't call me today? Call me tomorrow! Call anytime @(503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. My customers love the speedy service! I also have lots of Atari Reference Books. Which I can Mail by Book Rate!

e-mail: atari@benjamin.net

I've switched ISP's! Try www.pacifier.com/~atari or atari@pacifier.com and as always www.atari.benjamin.net and atari@benjamin.net still work but are being redirected to my new ISP and since I've moved, I have revamped and updated my WebSite and all my WebPages. So Check it out and, If you don't come see me today, come see me Tomorrow!

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit, Atari ST Computers & Atari 64 Bit Jaguar Game Machines!! HardWare, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net while you Download Free Catalogs directly from my site. If you can't get my Catalogs that way, Feel free to Request catalogs by E-Mail. Really, it's not an inconvenience. I ask that you specify Atari 8 Bit, Atari ST and/or Atari Jaguar! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your full Mailing address so I can figure Shipping & Handling. I'll be back after the weekend. Bye!

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or atari@pacifier.com instead of NewsGroups as I
am swamped and I find it hard to keep up with reading the NewsGroups.

I update my catalogs once a week. Just before this message is posted.
So when you see a new posting, check my Catalogs. After I post this
message. I'm off for the weekend. But I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or
atari@pacifier.com. If you can't reach me at benjamin.net see my
E-Mail/Web info in my Signature at the Bottom!

Bravo Sierra Computers has Moved! To a New ISP! Now Hosted on pacifier.com!!! Atari 8 Bit,
ST and Jaguar Hardware/Accessories, Software/Games & References/
Books. FREE Catalogs on the web at http://www.pacifier.com/~atari or at Ben's
SubDomain at http://www.atari.benjamin.net Catalogs Requested by and Received
Through E-Mail at atari@pacifier.com or atari@benjamin.net and Please Specify Atari 8 Bit,
ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

2839. FS/T: Atari 8-bit computer items and more... [05/04/2001]

Well as far as I can tell, it sounds like the MIO or Black Box is the way to go. I've looked at a couple of the IDE hacks and them seem very system specific and involve milling around in the computer itself. I like the idea of MIO or Black Box because I have a couple of different 8-bits. 130xe, 800xl, xegs. If any one who reads this group has either of these devices they'd be willing to part with, for trade, cash or both please let me know. Thanks for the help everyone.

0.1) Table of contents

The Computers
1.1) What is an Atari 8-bit computer?
1.2) What is the Atari 400?
1.3) What is the Atari 800?
1.4) What is the Atari 1200XL?
1.5) What is the Atari 600XL?
1.6) What is the Atari 800XL?
1.7) What is the Atari 65XE?
1.8) What is the Atari 130XE?
1.9) What is the Atari 800XE?
1.10) What is the Atari XE Game System?
1.11) What are the ANTIC, CTIA/GTIA, POKEY, and FREDDIE chips?
1.12) What is the internal layout of the 8-bit Atari?
1.13) What are the pinouts for the various ports on the Atari?

Video Display
2.1) What kinds of monitors can I use with my Atari?
2.2) What is the difference between NTSC and PAL machines?
2.3) Is the software for the Atari 8-bit computers "TV-standard dependent?"
2.4) What are the PAL, NTSC and SECAM video broadcast standards?

Mass Storage
3.1) What are the Atari 410, 1010, and XC12 Program Recorders?
3.2) How do I run a program from cassette?
3.3) What are the Atari 810, 1050, and XF551 Disk Drives?
3.4) What floppy disk drives can I use with my Atari?

3.5) What do I need to connect a hard drive to my 8-bit Atari?

Printers
4.1) What are the Atari 820, 822, and 825 Printers?
4.2) What are the Atari 1020, 1025, 1027, and 1029 Printers?
4.3) What are the Atari XMM801 and XDM121 Printers?

Modems
5.1) What are the Atari 830, 835, 1030, XM301, and SX212 Modems?
5.2) What should I know about modems and the Atari?

More hardware
6.1) What is the Atari 850 Interface Module?
6.2) What is the Atari XEP80 Interface Module?
6.3) What accessories did Atari produce for their 8-bit computers?
6.4) What "vaporware" computers/peripherals were never released?
6.5) What are the power requirements for my Atari components?

Core software: OS, BASIC, DOS
7.1) What versions of the Atari Operating System (OS) are there?
7.2) What versions of Atari BASIC are there?
7.3) What are Atari DOS I, DOS II v2.0S, DOS III, DOS 2.5, and DOS XE?
7.4) What's the best DOS for the Atari?
7.5) How do I modify Atari DOS to support more than two drives?
7.6) Are there Graphical User Interfaces (GUIs) for the Atari?

Software
8.1) What are the best terminal emulators available?
8.2) What BBS software can be used on the Atari?
8.3) What programming languages are available for the Atari?
8.4) What cartridges were released for the Right Slot of the 800?
8.5) What games support 4 or more simultaneous players?
8.6) What programs run only on the 400 and 800 models, and why?
8.7) What programs make use of the Light Gun or a light pen?
8.8) What programs have a track ball mode or support a mouse?
8.9) What programs have a paddle(s) or Koala Pad mode?
8.10) What programs have a CX85 mode?
8.11) What programs have a Touch tablet mode?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?
9.3) What are the .DCM, .ATR, .XFD, .SCP, and .DI disk image formats?
9.4) What are the .XMO and .BIN file formats?
9.5) How can I make my commercial boot disk (tape, cart) into a load file
or disk image?
9.6) How can I convert my commercial boot tape into a cassette image file?

File Transfer Solutions
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) How do I transfer files using a null modem cable?
11.4) What is SIO2PC?

11.5) What is the Atari Peripheral Emulator (APE)?

"leftovers"
13.19) What's the difference between ASCII and ATASCII?

Timeline
15.1) How did Atari get it's name?
15.2) What is the History of Atari?

Subject: 1.1) What is an Atari 8-bit computer?

Based in Silicon Valley in the U.S.A., the company known as Atari produced a line of home computers from 1979 to 1991 often referred to collectively as the "Atari 8-bits," the "8-bit Ataris," the "400/800/XL/XE series," etc.

The computers included the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

These machines competed in the marketplace with the likes of the Commodore 64 series, the Apple II series, the Texas Instruments TI99/4A, and the Radio Shack Color Computer. Of these, the 8-bit Atari is most similar to the Commodore 64.

The 8-bit Atari computers are not software compatible with other Atari platforms, such as the 2600 Video Computer System (VCS), the 5200 SuperSystem, the 7800 ProSystem, or the ST/TT/Falcon computers. All of these but the 5200, however, do share the same joystick/controller hardware port.

Here are some of the performance specifications of the 8-bit Atari:

(Some of this text by Bill Kendrick.)

CPU: 6502 (MOS Technology)
CPU CLOCK SPEED:
NTSC machines: 1.7897725 MHz
PAL machines: 1.773447 MHz

SCREEN REFRESH RATE:
59.94 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

GRAPHICS MODES:
ANTIC CIO/BASIC Display Resolution Number of
Mode # Graphics # Type (full screen) Colors

C 14 ++ Map 160 x 192 2
D 7 Map 160 x 96 4
E 15 ++ Map 160 x 192 4
F 8 Map 320 x 192 1 *
F 9 + Map 80 x 192 1 **
F 10 + Map 80 x 192 9
F 11 + Map 80 x 192 16 ***
* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.
```

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16 luminances x 16 hues = 256 colors. (Four registers are for player-missile graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video incarnation, are totally redefinable.

PLAYER-MISSILE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are available. A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:

All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was

(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.2) What is the Atari 400?

Released along with the 800 in 1979, the 400 was the low-end model of the two.
The only 8-bit Atari with a membrane keyboard rather than a full-stroke
keyboard. One of the few 8-bit Ataris lacking a composite monitor port.
Originally released with just 8K RAM, but most were sold with 16K RAM. There
was also a factory-authorized 48K upgrade available through dealers.

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 400 units include the CTIA chip; later units include the GTIA chip,
also present in all later 8-bit Ataris.

The 1982 Atari catalog calls the 400 "The Basic Computer".

The 400 was discontinued in 1983.

During development the 400 was known internally as "Candy."

Subject: 1.3) What is the Atari 800?

Released along with the 400 in 1979, the 800 was the high-end model of the
two. The 800 is the only 8-bit Atari with a Right Cartridge slot, in addition
to the Left Cartridge slot as present on all 8-bit Ataris. Originally
released with just 8K RAM, many were sold with 16K, later on 48K was standard.

The 800 is also the only 8-bit Atari with a four-slot modular design, where
the first slot holds the CX801 (CX801-P for PAL machines) 10K ROM module, and
the other three slots hold combinations of CX852 8K or CX853 16K RAM modules.

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 800 units include the CTIA chip; later units include the GTIA chip,
also present in all later 8-bit Ataris.

The 800 was discontinued in 1983.

During development the 800 was known internally as "Colleen."

Subject: 1.4) What is the Atari 1200XL?

Released as a big brother to the 400/800 in 1982, the 1200XL now uses Atari's
slightly customized 6502C microprocessor, and includes a full 64K RAM. The
1200XL was the first 8-bit Atari with just 2 controller ports. In addition,
the 1200XL includes 4 programmable Function keys and a Help key, 4 LEDs,
built-in diagnostic and graphics demonstration programs, and probably the
favorite keyboard of any 8-bit Atari computer. Clicks previously outputted

through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

The 1200XL was the biggest single step forward in development of the 8-bit Atari platform, but the corresponding software compatability problems hurt its popularity.

The 1200XL was discontinued in 1983.

Subject: 1.5) What is the Atari 600XL?

Released in 1983 as a replacement for the 400, the 600XL is the low-end version of the 800XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the 1064 Atari Memory Module.

Normally boots with Atari BASIC enabled;
Hold down [Option] on startup to boot without BASIC.

The 600XL was discontinued in 1985.

Subject: 1.6) What is the Atari 800XL?

Released in 1983 as a replacement for the 800 and 1200XL, the 800XL is the high-end version of the 600XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 800XL contains 64K RAM.

Normally boots with Atari BASIC enabled;
Hold down [Option] on startup to boot without BASIC.

Though Atari never disclosed sales figures, the 800XL was likely the most-sold of all 8-bit Atari computer models.

The 800XL was discontinued in 1985.

Subject: 1.7) What is the Atari 65XE?

Released in 1985 as a replacement for the 600XL, the 65XE is the low-end version of the 130XE. The 65XE is nearly identical to the 800XL in features, minus the PBI. European 65XE's include the ECI port, present only on the 130XE in North America.

Normally boots with Atari BASIC enabled;
Hold down [Option] on startup to boot without BASIC.

The 65XE was discontinued in 1991.

Subject: 1.8) What is the Atari 130XE?

Released in 1985 as a replacement for the 800XL, the 130XE is the high-end
version of the 65XE. The 130XE offers 128K RAM, plus the FREDDIE chip,
supporting the unique (but rarely used) ability for the 6502 and the ANTIC to
independently access RAM banks. In addition, the 130XE replaces the PBI port
with the Enhanced Cartridge Interface (ECI), continuing the powerful feature
of a fast parallel port.

Normally boots with Atari BASIC enabled;
Hold down [Option] on startup to boot without BASIC.

The 13XE was discontinued in 1991.

Subject: 1.9) What is the Atari 800XE?

Unseen and unknown in North America, the 800XE is identical in features
to the European version of the 65XE. Which means it could also be described
as a 64K version of the 130XE.

Normally boots with Atari BASIC enabled;
Hold down [Option] on startup to boot without BASIC.

So far I have not been able to determine when the 800XE was released, but it
was definitely discontinued by 1991.

Subject: 1.10) What is the Atari XE Game System?

In a change of marketing strategy, Atari introduced the new XE Game System
in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system.
It offers the convenience of a detachable keyboard and built-in
Missile Command game (hold down Select at startup), while offering 64K RAM
and full compatibility with the 65XE. It was packaged with the Light Gun,
and the Flight Simulator II and Bug Hunt cartridges.

James Bradford offers:
With the keyboard connected and no cart, basic boots, with out a
keyboard connected and no cart, the built in game runs.
There is only 1 32K ROM in the XEGS, it has the OS, BASIC and Missile
Command on it.

The XE Game System was discontinued in 1991.

Subject: 1.11) What are the ANTIC, CTIA/GTIA, POKEY, and FREDDIE chips?

The following four paragraphs were written by Chris Crawford and appear in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. The text been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a PIA. However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missile graphics, and collision detection.

POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

6502--MORE:
While the 400/800 models contain a generic 6502B CPU (a faster version of the original 6502A microprocessor), all of the XL/XE models contain Atari's customized 6502C chip.

On the Atari, there are two microprocessors, ANTIC and the 6502. To allow them to coexist, ANTIC must shut off the 6502, a process called DMA. The 6502B supports DMA, but in Atari's implementation, it required 4

chips. The 6502C has an extra line called HALT. It is controlled by ANTIC which uses it whenever it needs the data/address bus. The HALT line is on pin 35 of the Atari 6502C and must be pulled high for the chip to work.

FREDDIE:
The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to
James Bradford, "FREDDIE is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDIE also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDIE but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDIE, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDIE for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDIE does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDIE) and an extra 8 RAM chips."

And more recently James Bradford has written:
FREDDIE is just a memory decoder and timer. It replaces several chips in the 800xl The small chip near FREDDIE does all the bank selection.CO25953. One line from FREDDIE , Ras (or is it cas?) goes to this chip, Halt and the bank /processor select lines go into this same chip and ras (cas?) comes out. a pin for each bank. If i remember correctly, refresh also goes into this small chip. It would be quite easy to make an 800xl work just like a 130xe with this chip since Ras (Cas?) is required by ALL dynamic ram.

GTIA--MORE:
In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Clay Halliwell provides this tidbit:
A bit of trivia: CTIA 400/800s artifacted in blue/green, GTIA 400/800s artifacted in green/blue, and all XL/XEs artifact in red/blue.

Jerry Jessop explains why French Ataris produce fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in

80-84 sales of these items there were not possible."

Andreas Magenheimer writes:
All of these newer and buggy GTIA`s were built with the "eastern european" XE computers. they were made in China. Although Atari knew about this, they did not change them. so you have to replace them with older XL/XE GTIA chips...

But one more thing to GTIA and ANTIC chips: All PAL versions of these chips have a color bug, since gr. 11 produces 16 colors, but merely 15 different colors (one color: brown at the beginning and end of the palette is absolutely the same; normally there should be a red tone here !); with gr. 9 you will see 16 shades, but merely 15 different shades (the same as gr. 11, one shade is doubled!).

Strange enough, I also found this color bug to appear in PAL ANTIC chips, there is also the red tone missing (and the brown one doubled !). This color bug appears in all PAL ANTIC and especially GTIA chips. Atari never fixed it, so you find it inside any GTIA equipped PAL Atari 800 and also the later XL and XE models. Since PAL users have to live with this bug, they sometimes do programs which look absolutely strange on NTSC and vice versa (not to mention the different Herz frame 50/60 hz and higher PAL line resolution/overscan).

Imagine the following: a PAL GTIA has 15 colors in gr. 11
a NTSC GTIA has 16 colors in gr. 11
a PAL GTIA has 15 shades in gr. 9
a NTSC GTIA has 16 shades in gr. 9

Thus, a combination of gr. 9 and 11 gives:
16x16 = 256 colors on NTSC
15x15 = 225 colors on PAL

And - as said before, the bug seems also to appear with ANTIC...
Bad luck, we PAL users... Greets - Andreas Magenheimer.

Technical data and schematics for the ANTIC, GTIA, and POKEY chips are available on Curt Vendel's web site, thanks to permission from Hasbro's Atari Interactive Divisions release of this data. See:

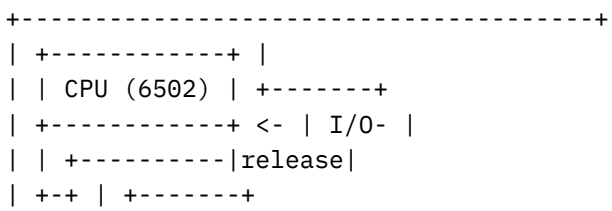
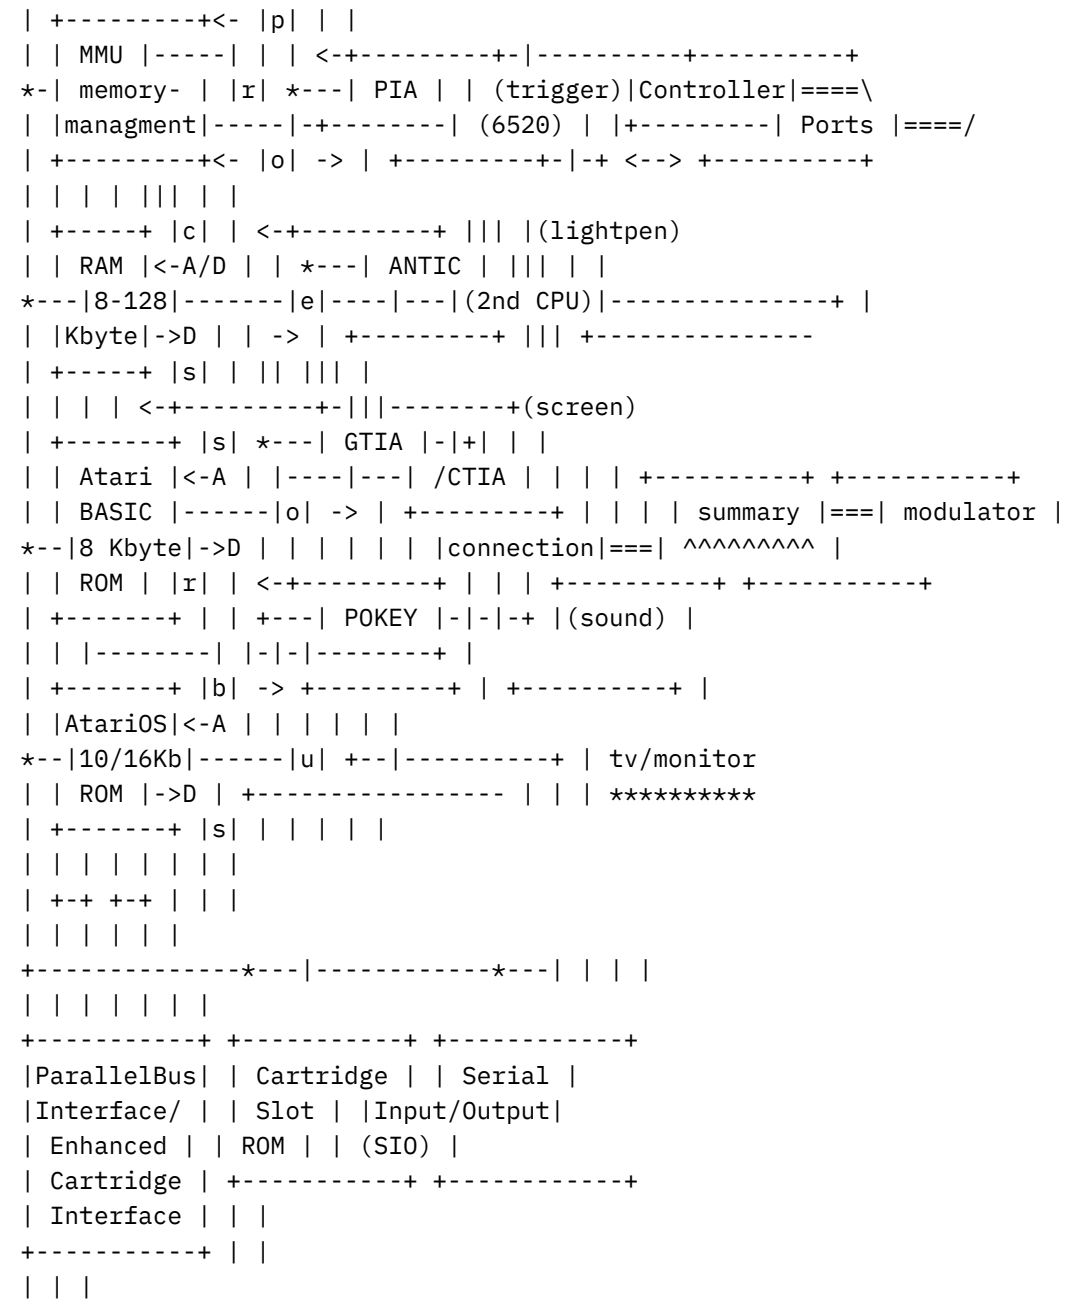
Subject: 1.12) What is the internal layout of the 8-bit Atari?

ASCII art by Thomas Havemeister.





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard
130XE:128K standard
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502B, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA

* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE/European 65XE only
* Some late XE's use a 68B21 for PIA; PIA is 6520/6520A on all others

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan), Jerry Jessop, Scott Emmons

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - POKEY logic design

Subject: 2.1) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus separate chroma (color) and luminance (brightness) signals which the best composite video monitors can take advantage of. Popular examples of such monitors include the family of monitors produced by Commodore.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only be used with a TV.

-the XE Game System provides an RCA-style jack in place of the Monitor port; so it provides Composite Video but lacks separate chroma\luma signals

-the 600XL, 800XL and 1200XL lack separate chroma signal (can be added via hardware modification)

-the XEP80 Interface Module produces a monochrome Composite Video signal via an RCA-style jack. This higher-resolution signal produces crisp, clear 80 column text on 80-column monochrome composite video monitors.

The pinout of the Monitor port is in the pinout section of this FAQ list. The monitor connector on the back of the Atari can be utilized using a 4-pin DIN to RCA converter. You don't need to build a separate cable.

Brent Buescher, Jr. writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

Bryan Edewaard writes:

"Yes, the best choices are monitors that support "Separated Video" (sometimes called Commodore video on Commodore monitors), or S-Video. These monitors have separate color and luminance video inputs, which give a sharper picture without cross-color artifacts - such as the colored fringes on text when viewed on a TV (although some games use these artifacts to get additional colors). If you have an XL computer, then it needs an upgrade to support these monitors due to the omission of chroma from the monitor port. the 800 and XE computers don't have this problem.

The 2nd best choice is a TV or monitor that has a "Composite Video" (usually called just "Video" or "Aux") input. This is a signal that has the color and luminance information combined into one signal. The picture will be a little less sharp, but still much better than using the "Channel 3" output.

>Where might I find one?

I've seen them a flea markets, garage sales, swap meets, ham fests, and in newsgroups like this one. Plus, many new TV's support S-Video and Composite video inputs.

>What are the advantages of using one of these rather than a TV?

Well, it's all a matter of how many stages the signal must go through.

1. The Atari generates video as a color signal and a brightness (luminance) signal. These are passed to the monitor port as Chroma and Luma signals (XL's have no Chroma output from the factory).

2. The signals are mixed together to make a standard video signal which is also passed to the monitor port as Composite Video.

3. Then the mixed video signal (along with audio) goes through the process of being "modulated" into a TV radio signal (channel 3 or 4). This step involves removing high frequencies from the video (blurring it) and sending it to the TV in a fragile broadcast form that's suseptable to all kinds of interference. Then the TV must (1) extract the video signal from the radio signal, (2) separate the Chroma and Luma components as best it can, then (3) divide the Chroma in R, G, and B. Any of these steps that you can eliminate will help your picture.

>Are there any other composite video monitors that anyone would recommend
>(and where might I find one)?

The most common one is probably the Commodore 1702 which has a very good picture and is quite reliable.

If you plan to use an XL (which I do), upgrading the video circuitry makes as big a difference as what monitor you choose. Ben Poehland has some excellent articles in Atari Classics magazines for improving the quality of the XL's video, as well as restoring the missing Chroma output."

Lonnie McClure has the last word on Commodore monitors:

Comodore models: 1701, 1702, 1802, CM-141, 1080, 2002, 1902, 1902A*, 1084**, 1084S**.

* The 1902A used a DIN connector for chroma/luma, which makes cabling a bit more of a problem. The composite and audio connectors are standard RCA jacks, however.

** The 1084 and 1084S had more than one version. Some used the a DIN connector for chroma/luma connections, like the 1902A, while some used

standard RCA jacks.

The 1902 and 1902A are very different in appearance. The original 1902 shares the same slightly rounded front case design as the 1080 and 2002, while the 1902A is has a rather square case design, and was manufactured by Magnavox (as were some of the 1084 and 1084S versions).

Subject: 2.2) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines, but software designed on PAL machines (Europe) won't necessarily work on NTSC machines.

Wayne Booth writes:

The differences with PAL and NTSC have to do with the number of lines displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they refresh the screen 50 times a second doing 1/2 the lines each refresh so they effectively repaint the screen 25 times a second. NTSC is 525 lines/screen with a 60 times a second refresh - again only half the lines each refresh so a 30 times a second frame rate. This would change the amount of time available during vertical sync pulse, and the number of lines that need to be redrawn each time.

Graham Thornton adds:

I use both a real PAL Atari 800 and a PAL-ANTIC 1200XL here in the US.

Replacing the ANTIC chip with a PAL version changes the screen refresh rate to 50Hz which allows most of the PAL-only European software to run. Your system will still report itself as a NTSC machine, unless you change the ROM (see the Nir Dary upgrade), but most software doesn't care.

But James Bradford responds: (7/19/00)
Not true. the PAL Flag is in the GTIA chip, not in ROM. The NTSC and PAL roms are the same. Only Rev A ROM was had different versions. I am not sure if Rev B ROMs had seperate versions.

Graham continues:
The one problem you might run into is your monitor. Replacing the ANTIC will mean your North-American Atari is now generating an NTSC signal at 50Hz, instead of the usual 60Hz. Some people will tell you that modern TVs and monitors don't care but that isn't actually true. My brand-new Sony Trinitron 15" colour TV/monitor goes bezerk with the upgraded 1200XL, but my 15-year old 10" Texas Instruments color monitor (designed for the TI-99/4A) is fine.

You can also use real European equipment here in North America, provided that you have a PAL-compatible TV/monitor. The frequency of the power system is irrelevant, as I use my 800 with a 110V/60Hz 1050 power supply.

Subject: 2.3) Is the software for the Atari 8-bit computers "TV-standard dependent?"

(some PAL demos flicker, or won't run at all on NTSC machines)

Brent Buescher, Jr. writes:

This is because PAL machines have a vertical refresh frequency of 50hz (NTSC use 60hz) which translates into more vertical blanking time for demos and other computation-intensive graphics software. So PAL demos that won't work on NTSC machines are usually returning from a VBI (vertical blanking interrupt) too late. Some also attempt to use more vertical resolution ("longer" display lists) than an NTSC display can handle.

Thomas Richter adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough to notice the difference, so all system timings like the keyboard auto-repeat function depend on the TV system. These parts of the OS have been corrected with OSB and the XL versions of the OS. However, as most games install a VBI, their timing does still depend on the frequency -> they will run slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the ANTIC-F (Graphics 8) mode are not colorful at all when displayed on a PAL TV, because of differences in the color encoding for the TV. The schematics of the Xl computers include however a hack how to change the PAL version to the NTSC version (the PAL versions include two crystals, one with 5/4th of the frequency of the other. One is used for the system clock, the other for the color clock), but I never dared to apply it.

Subject: 2.4) What are the PAL, NTSC and SECAM video broadcast standards?

Here are several links on the topic.

http://www.ee.washington.edu/conselec/CE/kuhn/ntsc/95x4.htm
http://www.alkenmrs.com/video/standards.html
http://www.ee.surrey.ac.uk/Contrib/WorldTV/

http://www3.3dresearch.com/video/Conversion2.html

Subject: 3.1) What are the Atari 410, 1010, and XC12 Program Recorders?

The Atari Program Recorders provide storage and retrieval of programs and data on cassette tape. In addition to the digital track that stores computer data, a second audio track is provided to play music or voice as the program runs.

Data transmission rate: 600 bits per second.
Data storate capacity: 100,000 bytes per 60-minute cassette.
Track configuration: 4 track, 2 channel (digital data and audio track)

410 Program Recorder -Japan and Hong Kong versions. 410a--Taiwan version

1010 Program Recorder -Sanyo and Chelco versions

XC11 Program Recorder
XC12 Program Recorder
XCA12 Program Recorder -in same case as XC12...Poland
CA12 Program Recorder -in same case as XC12...Poland
image: http://romualdl.multimania.com/images/atari/ca12.jpg
XL12 Program Recorder -XC12 w/slight changed design. Czech/Slovak/Poland
XC13 Program Recorder -XC12 which was "T2000 ready". Czech/Slovak/Poland

---

Subject: 3.2) How do I run a program from cassette?

To run an Atari BASIC program from cassette:

1. Place the cassette in the recorder.
2. Press REWIND of FORWARD, if necessary, to bring the tape to the position where the program is located.
3. Boot the computer to the Atari BASIC READY prompt.
4. There are several possibilities for the next step, depending on how the program was saved, and whether you want to run the program or just load it into RAM. Enter one of the following four commands:
a. CLOAD loads programs saved with CSAVE
b. LOAD "C:" loads programs saved with SAVE "C:"
c. ENTER "C:" loads programs saved with LIST "C:"
d. RUN "C:" loads&runs programs saved with SAVE "C:"

] Relative efficiency of the three cassette tape recording techniques:
] CSAVE/CLOAD - most efficient - fastest saves/loads - tokenized files
] SAVE "C:"/LOAD "C:" - middle efficiency - middle speed - tokenized files
] LIST "C:"/ENTER "C:" - least efficient - slowest - straight ATASCII

5. The computer will "beep" as a signal for you to press PLAY on the recorder.
6. Press the RETURN key on the computer keyboard, and the program will load into the computer.
7. Press STOP on the recorder when loading has finished.
8. Unless you entered RUN "C:" above, now enter the command: RUN

To run an Atari BASIC or machine language program from cassette upon startup:

1. Place the cassette in the recorder
2. Press REWIND of FORWARD, if necessary, to bring the tape to the position where the program is located.
3. Turn on the computer while holding down the START key.
But if your computer has Atari BASIC built-in and you're running a machine language program, hold down both the START key and the OPTION key.
4. The computer will "beep" as a signal for you to press PLAY on the recorder.
5. Let go of the START/OPTION button(s).

6. Press the RETURN key on the computer keyboard, and the program will load
into the computer.
7. Press STOP on the recorder when loading is complete and the program is
running.

Subject: 3.3) What are the Atari 810, 1050, and XF551 Disk Drives?

==> Atari 810 --- a 5.25" floppy disk drive
The least common denominator for the Atari. Single-Sided, Single-Density:
FM 40 tracks x 18 sectors/track x 128 byte/sector = 90K capacity
19.2Kbps transfer rate. 288RPM.
The 810 includes a 6507 microprocessor.
Shipped with DOS I (very early) or DOS II Version 2.0S
MPI&Tandon versions.
accessories from Atari:
CX8100 Atari 810 Blank Diskettes (5 per box)
CX8111 Atari 810 Formatted Diskettes II (5 per box)
CX8202 Atari 810/815 Blank Diskettes (5 per box, certified for double density)

Third-party upgrades for the 810:
810 Archiver -- copy many copy-protected programs
Happy 810 -- Happy Backup, Warp Speed 52Kbps, 18 sector buffer
810 Fast Chip by Binary 10%-40% faster
810 Turbo by Neanderthal Computer Things (NCT) -- double-density
see: http://www.qnet.com/~dons/810T.html

==> Atari 1050 --- a 5.25" floppy disk drive
Same as the 810, plus Dual-Density capability:
Single-Sided, Single-Density, 810 compatible
Single-Sided, Dual-Density, otherwise known as "Enhanced Density" because it
is not true double-density:
MFM 40 tracks x 26 sectors/track x 128 bytes/sector = 128K capacity
19.2Kbps transfer rate. 288RPM
The 1050 includes a 6507 microprocessor.
Shipped with DOS II v2.0S, DOS III, or DOS 2.5
DIP switches: Black & white left: Drive 1
Black right, white left: Drive 2
Black left, white right: Drive 3
Black & white right: Drive 4
Third-party upgrades for the 1050:
ICD US Doubler SS SD/ED/DD UltraSpeed (US) 54Kbps, sector skewing
Happy 1050 SS SD/ED/DD Warp Speed 52Kbps, 36 sector buffer,
Happy Backup. also read/write 180K 5.25" MS-DOS floppies
CSS Super Archiver SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
CSS Super Archiver II SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
Cheer-Up 1050 SS SD/ED/DD Warp Speed 52Kbps (Happy clone)
Speedy 1050 SS SD/ED/DD Warp Speed 55-57Kbps (Happy clone)
Super Speedy 1050 SS SD/ED/DD Warp Speed 55-57Kbps (Happy clone),w/180K RAM
SuperMax 1050 SS SD/ED/DD UltraSpeed 52Kbps (US Doubler clone)
Lazer 1050 SS SD/ED/DD Warp Speed and UltraSpeed 54Kbps

Rich Mier professes:
You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

==> Atari XF551 --- a 5.25" floppy disk drive
Single-Sided, Single-Density, 810 compatible
Single-Sided, Enhanced-Density, 1050 compatible
Single-Sided, Double-Density:
MFM 80 tracks x 18 sectors/track x 256 bytes/sector = 360K capacity
Writes "backwards" to the second side of the disk, rendering it incompatible with existing third-party 180K formats on the reverse side of the disk.
High speed 38400 bps burst mode usable only with SpartaDOS X, SuperDOS 5.1, TurboDOS, DOS XE, and patched SpartaDOS 3.2.
Rotaton rate: 300RPM.
Shipped with DOS 2.5 or DOS XE.
DIP switches: Both dips down: Drive 1
Left down, right up: Drive 2
Left up, Right down: Drive 3
Left and Right up: Drive 4
Chinon-built XF551-cannot read/write/format backside if no timing hole
Mitsumi-built XF551--can read/write backside if to timing hole, if formatted
Third-party upgrades for the XF551:
CSS XF Single Drive Upgrade--3.5", 720K floppy drive replacement
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFsingdrup.htm
CSS XF Dual Drive Upgrade--add 3.5" drive w/o losing the 5.25" drive
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFdualdrup.htm
CSS XF551 Enhancer--overcomes sensor for index hole, create flippy disks
see http://www.nleaudio.com/css/products/XF551enh.htm
CSS XF Update--replace drive OS, adds UltraSpeed
see http://www.nleaudio.com/css/products/XFupdate.htm

Subject: 3.4) What floppy disk drives can I use with my Atari?

Major contributors to this section: Glenn M. Saunders, Tomasz M. Tatar, James Bradford, Konrad M. Kokoszkiewicz, Don Schoengarth, Andreas Magenheimer

SS=Single-Sided SD=Single-Density, 90K/disk side

Subject: 3.5) What do I need to connect a hard drive to my 8-bit Atari?

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800 only

==> K-Products/Supra Hard Disk Drive Interface
by K-Products (Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (Mike Hohman)

256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2Kbps

==> CSS Black Box
RS-232 Serial Modem Port (19.2Kbps) w/ hardware flow control,
Parallel Printer Port,SASI/SCSI Hard Disk Port, Operating System Enhancements,
optional 64K printer buffer. Supports drives with 512-byte sectors.
see http://www.nleaudio.com/css/products/black.htm

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

==> MSC IDE Harddisk-Controller
created by Steve Birmanns and Matthias Belitz
http://www.birmanns.de/
* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

---

Subject: 4.1) What are the Atari 820, 822, and 825 Printers?

Atari 820 40-Column Printer:
- 5x7 dot matrix, impact printer
- 40 characters per line, upper & lower case alpha
- horizontal and vertical alphanumeric characters
- 6507 microprocessor, 6532 RAM I/O chip, 2K ROM
- 40 characters per second
- uses Standard Roll Paper/adding machine paper

Atari 822 40-Column Thermal Printer:
- 37 characters per second
- 10 characters per inch
- 40 characters per line, upper/lower case and point graphics
- 5x7 dot matrix

Atari 825 80-Column Printer (= Centronics 737)
- 3 character sets:
monospaced 7x8 dot matrix at 10 characters per inch
monospaced condensed at 16.7 cpi
proportionately spaced Nx9 dot matrix at avg of 14 cpi (N=6..18)
- all characters can be elongated (printer double width)
- characters per line: 80 at 10 cpi; 132 at 16.7 cpi
- speed: 50 cps at 10 cpi; 83 cps at 16.7 cpi; 79 cps avg. proportional
- print buffer: 1200 dot columns
- paper: roll, fanfold, or cut sheets
- requires Atari 850 Interface Module or equivalent

Subject: 4.2) What are the Atari 1020, 1025, 1027, and 1029 Printers?

Atari 1020 40-Column Color Plotter/Printer:
- 4-color graphics: (black, red, blue, green). optional 8-pen rainbow package
- alphanumberics and X,Y plotting capability
- 10 cps (40-column mode)
- 20, 40 and 80-column modes
- horizontal and vertical alphanumerics, English and International chr sets
- water soluble ink pen technology
- 4-pen barrel print head
- microprocessor
- paper: standard roll paper (40 column width)
- cassette software included
Frank McKenney writes: The printer/plotter mechanism for the Atari 1020 is (I
believe) the same one used in the Tandy/Radio Shack CGP series and the
Commodore 1520(?), and was made by a company named ALPS.

Atari 1025 80-Column Printer: (= Okidata ML80)
- 40 cps (80-column 10 cpi mode)
- 5 cpi expanded (40 col), 10 cpi (80 col), 16.7 cpi condensed (132-col)
- 5x7 character dot matrix
- buffer: 132 chrs at 16.7 cpi, 80 chrs at 10 cpi
- paper: roll,fanfold,single sheets. optional:roll paper holder, tractor feed

Atari 1027 Letter Quality Printer: (= Mann-Tally Riteman LQ.)
- fully formed characters, prestige elite 12)
- 12 characters per inch (80 columns)
- 20 characters per second
- single sheets or roll paper

1029 Printer -7-pin dot matrix, same as Commodore MPS-801

Subject: 4.3) What are the Atari XMM801 and XDM121 Printers?

coming

XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality.
Ribbon: Silver Reed CF130, Olivetti ET201,ET221,Nu-Kote NK136

Subject: 5.1) What are the Atari 830, 835, 1030, XM301, and SX212 Modems?

A MODulator/DEModulator translates digital information from your computer into acoustic tones that can be sent and received via standard telephone lines.

Atari 830 Acoustic Modem: (= Novation 'CAT')
- a stand-alone, acoustically coupled, frequency shift keying (FSK) modem
- up to 300 bits per second
- Bell 103/113 modem compatible
- requires Atari 850 Interface Module or equivalent

Atari 835 Direct Connect Modem:
- 300 bps
- Bell 103/113 modem compatible

Atari 1030 Direct Connect Modem:
- 300 bps
- Bell 103/113 modem compatible
- built-in ModemLink software.
- 2 SIO ports

XM301 Modem -300 baud, w/ XE Term software. Permanent SIO cable
SX212 Modem -1200 baud, rarely with SX-Express! package.
SIO & DB25 RS232 serial ports.external power supply

Subject: 5.2) What should I know about modems and the Atari?

Thanks to Bob Puff and Clay Halliwell for helping me with this section. But I'm still not real confident about the accuracy here. I'd love for anyone to help me fix up this section!

There are three types of modem protocols: modulation protocols, error correction protocols, and compression protocols. The international standards for these protocols are laid down by the branch of the United

Nations known as the ITU-TSS (formerly the CCITT). ITU standards are known by their "V-Dot" names. They're only names, don't try to apply any meaning to the names.

Modulation protocol standards, the major ones
(bits per second)
300 bps - V.21 (103J is used instead in the USA)
1200 bps - V.22 (212A is used instead in the USA)
2400 bps - V.22bis
9600 bps - V.32
14.4 Kbps - V.32bis
28.8 Kbps - V.34

Error Correction standard:
V.42 - requires either software or hardware flow control

Compression standard:
V.42bis - requires V.42, and hardware flow control.

If your modem is capable of V.42bis compression, set your communications software to enable hardware flow control. If your terminal interface allows you to set the terminal<->modem (DTE) and modem<->modem (DCE) baud rates separately, you should set the DTE rate to the maximum allowed. If the DTE and DCE cannot be set separately, set the terminal baud rate at four times the maximum actual data rate of your modem (V.42bis achieves a compression ratio of up to 4:1). Examples: If a V.22bis/V.42bis modem is used, set the terminal for 9600 baud. If a V.32/V.42bis modem is used, set the terminal for 38400 baud. If a V.32bis/V.42bis modem is used, set the terminal for 57600 baud.

Let's define a "high-speed" modem as a modem capable of V.42bis compression. (Some 2400 bps modems, and all modems faster than that)

Using high-speed modems on the Atari

Unless you're using a CSS Black Box or a patched MIO, the 8-bit Atari RS232 interfaces do not support hardware flow control. (I have heard that the P:R: Connection does too, but it can't be controlled in software.) So we must send the modem a command to tell the modem not to use it. Using a Hayes-compatible modem, the modem command AT &K4 will enable software flow control, and disable hardware flow control. AT &K0 will disable all flow control.

The MIO patch, HyperSpeed by Len Spencer, is available at:
http://members.aol.com/lenspencer/atari8.htm

Question. Why does my modem report V.42bis is used even when my terminal it set for the same speed as my modem?

Cause the modem will do what you tell it. You've configged it to talk at the highest speed, using LAP/M, and compression. Even if you connect modem to modem at 14.4k, you can be talking to the modem at 300 baud, and it will still use everything. You'll undoubtedly drop bytes, but hey...

Question. Why does V.42bis compression appear to function after I have sent the modem the AT &K4 or AT &K0 commands? And knowing the Atari doesn't support hardware flow control?

Compression doesn't have to have flow control to work. Same as above - its just an added step that the data goes through. Note that if the modem's input buffer is small, you can overrun it easily if you send it data faster than it can digest and send. That's why you -really should- be using flow control with compression... But it's not a necessity.

Question. Why does V.42 error correction appear to work even when I have disabled flow control with the AT &K0 command?

Question. Why don't I have problems performing binary downloads when I have software flow control enabled? (flow control characters could appear in data stream accidentally)

Depends on the protocol. Zmodem accounts for spurious XON/XOFFs. Xmodem and Ymodem don't. Also, you are able to digest the data as fast as the modem is giving it to you, hence no flow control is happening. I suspect it would be a different case if you were uploading using a streaming protocol like Ymodem G.

More tips, from Clay Halliwell:
On 11 Feb 1996, Marc G. Frank said:

> I'm having problems getting a modem attached to my Atari 850 to
> communicate at 9600 baud. When I set my communications program to 2400
> baud, everything works fine. However, when I set it to 9600 baud, the
> modem echoes my characters but doesn't act on them. That is, at 2400,

The problem with the 850 is that some of them (like mine) don't produce a PERFECT 9600 baud signal. As a result modems can't train on it, and while they will echo characters back, for some nitpicky reason they won't pick up on the "AT" attention code.

The solution is to do all your dialing at 2400 baud, but set the S37 register to force the modem to try to connect at 9600. Then switch your Atari to 9600 after connecting.

Jon Melbo responded to me in 1997:

>I have a Zoom 2400bps V.42bis modem, connected through a P:R:Connection. I
>need to do the
>at&k4 no matter what I'm dialing into, and no matter what comm program I'm
>running.
>
>Nobody's ever really been able to explain it to me, but I know it has helped a
>few other people. Try it!

What &K4 does is select XON/XOFF flow control. Apparently, all/most atari serial interfaces or at least R: handler software does not support hardware (CTS/RTS) handshaking (selected on the modem via &K3 which is also a default). Anyway, that's why the &K4 setting helps a lot.

Glenn Saunders responded to other writing of Jon's, 4/5/97:
: 28.8 CARRIER connects are possible BB or no, it's just that there is
: no point in having your modem do data faster than your puter can.

It simplifies modem configuration to let the modems connect at their
native speeds.

: Right! But you should never have your DCE to DCE speed exceed your
: DTE to DCE speed. Never, unless you like errors and strange behavior.
: With a BB, one should use CTS/RTS flow control, and force the modem to
: operate at a maximum of 19.2 PERIOD (this means disable compression).

It doesn't really matter. CTS/RTS can throttle the I/O down as much as it
needs to. The faster modem will wait for I/O without any complaints.
Disabling compression isn't a good idea because it will disable it for ALL
calls including 9600 or 14.4 users in which it could do some good even on
an 8-bit BBS. Software flow control is pretty much dead in
telecommunication, and has been dead as long as data compression has been
standard since the stop and start commands take way too long to register
that way.

: If using some other serial interface, I would use software flow
: control, disable data compression on the modem, force the modem to a
: max speed of 9600bps, and experiment with error correction. Does

This combination is deadly for most modern users unless they degrade their
modem via reconfiguration. And if users have to do this, odds are they
will stay away rather than futz with AT settings to get a reliable
connect. That's why I think the MIO essentially died as a viable BBS
interface when 14.4s became standard. They won't work well unless the
"mythical" hardware flow control of the thing is enabled in some way.

An explanation of XON/XOFF from Eric Sokolowsky, 4/11/97:

I looked in my modem manual, and the at&k4 command enables XON/XOFF
flow control, which is a form of software flow control. As I understand
it, when a XOFF is sent by the receiving end of a line, the sending
end holds off sending for a little while to give the receiving end
a chance to catch up. When the receiving end catches up, it can
send a XON which tells the sending end to continue sending. Using this
should reduce the liklihood of dropped characters. It's not as good as
hardware (RTS/CTS -- check out the FC light on most high-speed external
modems on fast transfers) flow control (enabled by default or the
at&k3 command), but it's good enough for the Atari, which as I
understand, doesn't normally allow hardware flow control, unless using
such a device as the Black Box.

to which Robert Ely responded:

Just a quick addition. If you are using a modem at 9600bps or faster,
don't use xon/xoff, use the RTS/CTS. Since you can do this with the MI/O
and BlackBox, use it for all it's worth. If you are on an 850 or
P:R:Connection, you won't be able to deal with it and probably won't be
going at or above 9600bps anyway.

Subject: 6.1) What is the Atari 850 Interface Module?

Atari 850 Interface Module: (beige & black metal versions)
- four 9-pin serial EIA RS232C ports
- One 15-pin 8-bit parallel Centronics-type port
- programmable baud rate on any port, including:
75, 110, 134.5, 150, 300, 600, 1200, 1800, 2400, 4800, and 9600 bps;
baudot speeds of 60, 66, 75, 100 words per minute
- uses standard ASCII. Baudot support for radio-teletype (RTTY).

850 R1: Serial port DB9P:
5 4 3 2 1 _____________________________
9 8 7 6 / DB25P
1. DTR - Data Terminal Ready (out) + 20

Subject: 6.2) What is the Atari XEP80 Interface Module?

This text written by Thomas Raukamp.

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from David A. Paterson.

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file,
which is the XEP80 handler. If you want to use the module with an application
that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you
can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 6.3) What accessories did Atari produce for their 8-bit computers?

This should be a complete list of Atari "CX" accessories, two or three digit
numbers, marketed for use with the 8-bit computers.

CX30-04 Paddle Controller Pair
CX40-04 Joystick Controller Pair
CX40 Single Joystick Controller
CX41 Joystick Repair Kit
CX22 Trak-Ball Controller
CX23 Kid's Controller
CX24 Pro-Line Joystick
CX50 Keyboard Controller Pair
CX70 Light Pen (beige; the original Atari light pen)
CX75 Light Pen
CX77 Touch Tablet (+ graphics tablet cassette program)
CX80 Trak-Ball
CX81 I/O Data Cord (5 ft)
CX82 Monitor Cable (Black and White Monitor)
CX85 Numerical Keypad (+ software Handler on diskette)
CX86 Printer Cable (included with 825 Printer)
CX87 Interface/Modem Cable (included with 830 Acoustic Modem)
CX88 Interface/Terminal Cable (null modem)
CX89 Monitor Cable (Color Monitor)
CX418 The Home Manager Kit (Pers'l Financial Managmnt,Home Filing Manager dsks)
CX419 The Bookkeeper Kit (The Bookkeeper disk, CX85 keypad)
CX481 The Entertainer (Star Raiders, (Missile Command or Pac-Man), 2 joysticks)
CX482 The Educator (410, BASIC cart., States & Capitals cassette)
CX483 The Programmer (BASIC, BASIC Ref. Manual, BASIC Self-Teaching Guide)
CX484 The Communicator (850, 830, TeleLink I cart.)

CX488 The Communicator II (835, TeleLink II cart.)
CX852 8K RAM Memory Module (for 800 computer)
CX853 16K RAM Memory Module (for 800 computer)

need CX number - Remote Control Joysticks

Subject: 6.4) What "vaporware" computers/peripherals were never released?

For definitive information on unreleased Atari products, see:

Atari Historical Society, http://www.atari-history.com/ (Curt Vendel)

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800D (Developers Bus System)
1000 Sweet 16 Project, lower end model. Became the 1200XL
1000-X Sweet 16 Project, higher end model. Became the 1200XL
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
600 early 600XL, all black case, joyports on the left, missing PBI
800XL brown prototype
800XLD low-cost 1450XLD,no modem&speech,include disk drive controller&FREDDIE
800XLF late European 800XL with a redesigned motherboard, + the FREDDIE chip
900XLF 800XLF motherboard with further improvements,found in early 65XE's
1250XLD Earlier name for the 1450XLD
1400XL brown prototype
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL 1400XL plus room for 2 internal 5.25" drives (controller not included)
1450XLD 1400XL plus 5.25" floppy drive (Epson SD521 360K disk drives)
1600XL Amiga/Amiga-like.Now appears that 1850XLD was the model name for this
1650XLD to use 1450XLD case and 1200XL keyboard
1850XLD "Mickey" Atari clone of the Amiga Lorraine
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D. some were produced!
1027 PLUS -daisy-wheel, 80 columns
1053 -looks like a 1050, but supports DS/DD 360K format
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1060 CP/M Add-On Module -"SweetPea" Z-80 CPU, 64K RAM, CP/M 2.2, 80 col display
1090 XL Expansion System-5 PBI slots, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -XE Thermal Color Printer

Subject: 6.5) What are the power requirements for my Atari components?

Thanks to Matthias Belitz for the European
data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this
information conflicts with the units you have.

The most important information is the voltage (in volts) required, and
whether you need a transformer (AC output) or an adapter (DC output).
The power (in voltamps or watts) and current (in amperes) specifications
of the original equipment as presented here should be regarded as
minimum values. Higher-than-specified power and current capacities are
entirely usable, and often preferable because such supplies run cooler
and last longer.

Direct Current (DC):
Power (in watts) = current (in amps) * voltage (in volts)

Alternating Current (AC):
Apparent Power (in voltamps) = current (in amps) * voltage (in volts)
Effective/True Power (in watts) = current (in amps) * voltage (in volts)
* (cosine of the angle of lag)

N O R T H A M E R I C A: INPUT = 115-120 V AC, 50/60Hz

3 800XE 03/01/1985 0x29f133f7 C300717
4 XEGS 05/07/1987 0x1eaf4002 C101687

(?) This information is missing. If someone can supply this info,
please write me an e-mail.

NOTES:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).
The 1200XL contains two ROMs for the OS (8k each), XL/XE's use a single
16k ROM and the 16k XEGS OS is stored in a 32k ROM (together with 8k
BASIC and 8k for Missile Command).

Origins of ROM information
~~~~~~~~~~~~~~~~~~~~~~~~~~
400/800 rev.A NTSC Could exist, since the PAL version exists and
rev.A is mentioned in the rev.B source code.
400/800 rev.A PAL All info found in two Atari 400's and Atari 800
ROM module CX801.P
400/800 rev.B NTSC Information from a ROM dump and the rev.B source
listing. The part numbers were listed in the
catalog from 'Best Electronics'. According to
'Mapping the Atari' rev.B ROMs have a 'B' at the
end of the part number, therefore I figure these
part numbers are from rev.B.
400/800 rev.B PAL Could exist, since the NTSC version exists and
there's some conditional PAL/NTSC assembly in
the rev.B source code
1200XL rev.10 PAL/NTSC All info found in an Atari 1200XL. The XL/XE
rev.2 source code refers to it as rev.10.
'Best Electronics' calls it rev.A.
1200XL rev.11 PAL/NTSC Refered to rev.11 by the XL/XE source code.
'Best Electronics' calls it rev.B.
XL/XE rev.1 All info found in an Atari 600XL
XL/XE rev.2 All info found in an Atari 800XL
XL/XE rev.3 All info found in an 800XE
XL/XE rev.4 All info found in an Atari XE Game System

O.S. Authors and dates
~~~~~~~~~~~~~~~~~~~~~~
The following info is from the Atari XL/XE rev.2 source code.

Revision A (400/800)
D.Crane / A.Miller / L.Kaplan / R.Whitehead

Revision B (400/800)
Fix several problems.
M.Mahar / R.S.Scheiman

Revision 10 (1200XL)
Support 1200XL, add new features.
H.Stewart / L.Winner / R.S.Scheiman /
Y.M.Chen / M.W.Colburn 10/26/82

Revision 11 (1200XL)
Fix several problems.
R.S.Scheiman 12/23/82

Revision 1 (600XL/800XL)
Support PBI and on-board BASIC.
R.S.Scheiman / R.K.Nordin / Y.M.Chen 03/11/83

Revision 2 (600XL/800XL)
Fix several problems.
R.S.Scheiman 05/10/83
Bring closer to coding standard (object unchanged)
R.K.Nordin 11/01/83

Vapour-ware
~~~~~~~~~~~
The following OS roms originate from rare Atari 8-bit systems.
Since I don't own any of these (unfortunately), I don't have much
information about these roms. Who can help me?

I've got two 16K rom dumps from the 1450XLD. Both ID's are rev.3.
The first dated 3/23/1984 comes from the 'Pooldisk Too' CD-ROM
(filename: 1540os3.v0) and the second dated 6/21/1984 was send to
me by Nir Dary (filename: os1450.128). Main differences between
these two are in the first 3K ($C000 - $CBFF).

The XL/XE OS rev.3B is from an Atari from Arabia. It's probably based
on rev.3. There are changes in the fonts (Arab characters) and several
patches in the code. More info at:
http://www.savetz.com/vintagecomputers/arabic65xe/

Rev. Found in Size CRC-32 Date
~~~~ ~~~~~~~~ ~~~~~ ~~~~~~~~~~ ~~~~~~~~~~
3 1450XLD 16kB 0x0d477aa1 3/23/1984
3 1450XLD 16kB 0xd425a9cf 6/21/1984
3B 65XE 16kB 0xf0a236d3 7/21/1984

Credits
~~~~~~~
Special thanks to Nir Dary for the rev.2 source code, rom dumps and the 1200XL. It's in good hands.

~~~~~~
More info on what is maybe either the 1985 or 1987 XL/XE OS versions listed above. From ST*ZMAGAZINE #36, Sept. 1, 1989 (as reprinted in PSAN Nov 89):
by Mark Elliot, Innovative Concepts
The following changes have been incorporated in the 130XE computer.

The O.S. has minor changes like:
A) The MEMORY TEST (from SELF TESTS) tests the extra 64K now! (in 4 squares)
B) Also, the MEMORY TEST checks the first 48K over TWICE as fast as before!
C) The KEYBOARD TEST has the F1-F4 keys missing on top. (function keys), although the code that interprets them is probably there (like XEGS).
D) Also, it types out "COPYRIGHT 1985 ATARI" at the keyboard test, when all tests are done. (compared to COPYRIGHT 1983 ATARI, before)
E) And, the O.S. chip itself, is on a 27256 EPROM, but only half of it is used! (comprared to the original, which was on a 16K x 8 ROM, 27128 comp.
~~~~~~
james adds (3/8/01):
Your faq, regarding OS Rev A, states:
Origins of ROM information
~~~~~~~~~~~~~~~~~~~~~~~~~
400/800 rev.A NTSC Could exist, since the PAL version exists and rev.A is mentioned in the rev.B source code.

Did exist! My parents bought me an Atari 400 w/ 410 back in 1981 for entertainment when I was badly injured in a motorcycle accident. A year or so later I paid good money ($40 USD or so?) to have the OS A upgraded to OS B.

Subject: 7.2) What versions of Atari BASIC are there?

There were three versions of Atari BASIC produced: A, B, and C.

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga adds:
You can also take a look at the part numbers on the IC's
inside your Atari and compare them with the numbers from
the following table:

Part# Version
~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~
CO12402 + CO14502 A
CO60302A B
CO24947A C

On versions A, B, and C, Greg Miller writes:

"Rev A had a number of bugs, not just the commonly
described crash bug. Rev B fixed most (maybe all, I don't remember) of
these, but in the process, they added a new bug. You see, the crashes
were caused by a bug in one of OSS's memory move routines. When the bug
was fixed, the fix mistakenly applied to a routine that actually worked
in Rev A, causing the new lockup problem.

Rev C differs in only a few bytes. AFAIK, the only change was to remove
the alteration made to the routine that was broken by Rev B.

You can get more details from the annotated source listing published by
Compute! books. Bill Wilkinson described many of the problems in detail.
He also talked about it in his column in Compute! magazine."

Wally Lang adds:

--- Warner's Atari issued Rev B in two formats:
(1) As a built-in Basic on 600XL and 800XL computers.
(2) As a special request order item for 400/800 and 1200XL computers.

--- Tramiel's Atari issued Rev C in both formats for XE series computers and
ALL previous Atari 8-Bit Computers.

Subject: 7.3) What are Atari DOS I, DOS II v2.0S, DOS III, DOS 2.5, and DOS XE?

Here are short descriptions of the various Disk Operating Systems (DOS)
versions produced by Atari for use with their 8-bit computers.

The original Atari DOS shipped with all 810 disk drives from 1979-1981. It
consists of a single file, DOS.SYS, which is loaded into memory from disk on
startup.
At the top of the menu screen it reads:
DISK OPERATING SYSTEM 9/24/79
COPYRIGHT 1979 ATARI
Unless you are a collector, you probably have no reason to work with DOS I.
The DOS I disk is labeled: Atari 810 Master Diskette (CX8101).

DOS II Version 2.0S was shipped with all 810 disk drives, and early 1050 disk
drives, from 1981-1983. It consists of two files:
DOS.SYS is loaded into memory from disk on startup
~~~~~~~~~~~~~~~~~~~~

DUP.SYS, which contains the DOS menu, is loaded only when needed.
MEM.SAV can be employed to preserve the contents of memory to disk when DUP.SYS is loaded, so that the data can be restored to memory when exiting from the DOS menu. DOS 2.0S supports Atari's proprietary single-sided, single density 90K 5.25" floppy disk format only. DOS 2.0S represents the lowest common denominator of Atari DOS versions--you can be assured than any Atari disk drive for the 8-bit Atari can work with disks formatted with DOS 2.0S. The DOS 2.0S disk is labeled: Atari 810 Master Diskette II (CX8104).

DOS II Version 2.0D was shipped with the rare Atari 815 Dual Disk Drive. This is the double density version of DOS 2.0S.
The DOS 2.0D disk is labeled: Atari 815 Master Diskette (CX8201).

DOS III shipped with 1050 disk drives from 1983-1985. It was created in part to take advantage of the 1050's Dual-Density capability, by employing a single-sided, enhanced-density 128K 5.25" floppy disk drive format. Atari called this format "dual-density," but the Atari community quickly came to refer to this format as "enhanced-density" to better differentiate it from widely available 3rd-party truly double density disk drives and supporting versions of DOS. DOS III uses a disk format incompatible with DOS 2.0S. It included a utility to convert files from DOS 2.0S to DOS III, but not back again. It used disk space less efficiently than DOS 2.0S. For these reasons and others, DOS III was not widely accepted by the Atari community, and like DOS I is not generally used except for curiosity's sake.

DOS 2.5 shipped with 1050 disk drives and early XF551 disk drives from 1985-1988. DOS 2.5 represented Atari's relenting to the masses, returning to DOS 2.0S compatability. DOS 2.5 very closely resembles DOS 2.0S, with just a few features added. It supports both DOS 2.0S single-density 90K formats, as well as an enhanced density 128K format for use with the 1050 disk drive. DOS 2.5 also includes a RAMdisk utility for use with the 128K 130XE computer, a utility to convert files from DOS III disks back to DOS 2.5, and other disk utilities. DOS 2.5 is just about as universal among Atari users as DOS 2.0S.

DOS XE shipped with XF551 disk drives from 1988-1991. Like DOS III, DOS XE introduced a whole new format for Atari floppy disks; but unlike DOS III, DOS XE also preserved general compatability with DOS 2.0S/2.5. DOS XE supports the full capabilities of the double-sided, double density 360K per 5.25" floppy disk XF551 disk drive, including that drive's high-speed burst mode. DOS XE also fully supports the 90K SS/SD capability of the 810 disk drive, the 128K SS/ED capability of the 1050 disk drive, the 180K SS/DD capability of most 3rd-party disk drives for the Atari, and a RAMdisk for use with the 130XE. Date-stamping of files is supported. DOS XE requires an XL or XE computer; it is not compatable with the 400/800 computer models. Even though DOS XE was critically well-received, and represented a substantial jump in capabilities over DOS 2.5, its arrival came so late in the crouded realm of Atari and 3rd-party DOS versions that it never achieved much acceptance among real users, and is now relegated to the same status as DOS I and DOS 3 before it. Before its release, DOS XE was widely known as "ADOS."

Subject: 7.4) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available. MyDOS 4.53/3 was released by David R. Eichel on 12/31/89.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g and 3.2gx are disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!. SpartaDOS 3.3c is produced on a 16K ROM cartridge from Video 61.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2g)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek.
(it is pronounced "Bay Vay Dos")

Carolyn Hoglin adds:
I didn't see TOP-DOS mentioned anywhere. This superior DOS was written by R. K. Bennett of Eclipse Software in Sunnyvale, CA. It was based on Atari DOS, but with many, many more features. It fully supports my double-density, double-sided Astra drives, automatically sensing the proper density and sidedness of both drives 1 and 2. (MYDOS only seemed to do that on drive 1.) Also supported are large ramdisks for Axlon, Mosaic, etc. The latest version was TOP-DOS 1.5+, which came with an excellent manual explaining how to use its powerful capabilities.

Any other versions of DOS all 8-bit Atari users should be aware of??
- SuperDOS 5.1
- BiboDOS 5.x

Subject: 7.5) How do I modify Atari DOS to support more than two drives?

Russ Gilbert writes:

DOS 2 type DOSes default to two drives.
Boot DOS and BASIC.
? PEEK(1802)
if it is 3 then you only recognize two drives.
To get the 3rd drive, poke 1802,7. Then go to dup.sys (type DOS)
and write system files. Next time you boot that DOS, you'll recognize
3 drives.
If you want four drives, poke 1802,15.

Subject: 7.6) Are there Graphical User Interfaces (GUIs) for the Atari?

this text to expand!

1) Diamond DOS (cartridge). Try to find version 3.

2) Screen Aided Management (SAM). Available from DGS,
http://www.dgs.clara.net/

3) BOSS, by Mirko Sobe. http://www.atarixle.de/

Subject: 8.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
http://www.cs.huji.ac.il/~itayc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes

Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

Subject: 8.2) What BBS software can be used on the Atari?

This section mostly by Winston Smith.
Credit for AMIS to MACE by Steven Sturza.

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
The AMIS BBS was written in BASIC by people from the
Michigan Atari Computer Enthusiasts. It included designs for a ring-detector.
You needed a sector editor and had to allocate message space by hand, hex byte
by hex byte.

Steven Sturza adds:
The AMIS BBS was written by people from the Michigan Atari Computer
Enthusiasts.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

o Carina BBS -- a shareware product of Shadow Software.

o BBS Express! Professional -- a product of Video 61, www.atarisales.com

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 8.3) What programming languages are available for the Atari?

This section also kept at http://www.student.kun.nl/f.offenga/atari.htm

Revision : 1.3
Date.... : 4/19/1999

==========
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include:
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Freddy Offenga, mailto: F.Offenga@student.kun.nl
==========

There are quite a lot! To get some structure in this section it's
divided into the following categories;

a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

The following format is used:

- Language titel (medium)
version, year : version, year
author/company : author/company
available..... : where/how to get it
package..... : programs, documentation
features..... : main features
Description.

The question marks (?) indicate that more information is
required about that topic.

Definitions:
umich University of Michigan Atari archive

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- A bunch of manuals
- Some copy-pasted lines from the Atari 8-bit newsgroup

a) ASSEMBLER

- 130XE+ Makro Assembler (disk)
version, year : 2.2, 1992
author/company : Torsten Karwoth
available..... : freeware, ?
package..... : assembler, editor, menu, monitor,
batch enhancement, linker/packer
features..... : macros
Two pass 6502 assembler with integrated menu, editor
and monitor shell. Needs extra RAM banks. Source
format is derived from Atmas Makroassembler.

- A65 (disk)
version, year : ?, 1989
author/company : Charles Marslett, WORDMARK Systems
available..... : freeware, ?
package..... : assembler, manual
features..... : source include
Two pass 6502 assembler. Source format is based on the

Atari Macro Assembler. Assembler source included.

- Alfasm, Turbo-Assembler/16 (disk)
version, year : 1.0, 1990
author/company : Jeff Williams, DataQue Software
available..... : ?
package..... : assembler, docs
features..... : source include
Two pass 6502/65816 assembler.

- Atari Assembler/Editor (cart)
version, year : ?, 1981
author/company : Atari
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : -
Two pass 6502 assembler with integrated editor/monitor

- Atari Macro Assembler (disk)
version, year : 1.0C, 1981
author/company : Atari, APX
available..... : ?
package..... : assembler, editor, debugger, manual
features..... : macros, source include
Two pass 6502 assembler.

- Atmas Makroassembler (disk)
version, year : 2, 1985
author/company : Peter Finzel, Hofacker
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : macros
Two pass 6502 assembler with integrated editor/monitor.

- Bibo Assembler (disk)
version, year : ?, 1986
author/company : Compy-shop
available..... : ?
package..... : assembler, editor, monitor
features..... : source include, data include
Two pass 6502/65c02 assembler with integrated editor/
monitor.

- Datasm/65 assembler (disk)
version, year : 2.0, 1981
author/company : DataSoft Inc.
available..... : ?
package..... : assembler, editor, menu, manual
features..... : -
Two pass 6502 assembler.

- EASMD (disk)
version, year : 1.0, 1981
author/company : OSS
available..... : ?
package..... : assembler, editor, monitor
features..... : ?
Two pass 6502 assembler with integrated editor/monitor.

- Fast Assembler (disk)
version, year : 1.5, 1995
author/company : MMMG Soft
available..... : ?
package..... : assembler, editor, disassembler
features..... : ?

- Kasm65 (disk)
version, year : 2.41, 1994
author/company : Ken Siders
available..... : shareware, umich
package..... : assembler, editor, linker, docs
features..... : macros, relocation, source include,
conditional assembly
Two pass 6502 assembler. Relocatable object files are
compatible with ra65. Source format is derived from
the Atari Macro Assembler.

- MAC/65 Macro Assembler (disk|cart)
version, year : 2.00, 1982
author/company : Stephen D. Lawrow, OSS
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : macros, source include
Two pass 6502 assembler with integrated editor/monitor.
Mac/65 is a direct descendant of the Atari Assembler/
Editor (via EASMD).

- MAE (disk)
version, year : .96, 1996
author/company : John Harris
available..... : umich
package..... : assembler, menu, editor, monitor, docs
features..... : macros, source include, data include,
conditional assembly
Two pass 6502/65816 assembler with integrated editor/
monitor. Extra RAM supported.

- NASM65 (disk)
version, year : ?, 1992
author/company : Nat!
available..... : ?
package..... : assembler, linker, librarian
features..... : macros, relocation, source include
One pass 6502 portable cross assembler (initially for

the ST). Highly compatible with MAC/65.

- PC-65 (disk)
version, year : 1.0 beta, 1996
author/company : Jan Feenstra & Freddy Offenga
available..... : mailto: F.Offenga@student.kun.nl
package..... : assembler
features..... : macros, source include, data include,
boundary directive
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.

- Quick Assembler (disk)
version, year : 1.0, 1990?
author/company : JBW, Avalon?
available..... : ?
package..... : assembler, editor, menu, debugger
features..... : source include
Two pass 6502 cross assembler with integrated editor.
Very user friendly menu environment.

- Ra65 (disk)
version, year : 1.0, 1989
author/company : John R. Dunning
available..... : public domain, umich
package..... : assembler, linker, librarian
part of cc65 (c-compiler)
features..... : ?

- Synassembler (disk|cart)
version, year : ?, 1982
author/company : Steve Hales, Synapse Soft
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : source include
Two pass 6502 assembler.

- ST-65 (disk)
version, year : ?, 1991
author/company : A. Stauffenberg, F. Offenga
available..... : mailto: F.Offenga@student.kun.nl
package..... : assembler, menu shell, manual
features..... : macros, conditional assembly,
source include, data include,
boundary directive
Two pass 6502/65c02 cross assembler for the Atari ST
written in 68000 assembly. As far as I know this is
the first assembler with the boundary directive.

b) BASIC

- A BASIC Compiler (?)
version, year : 1.03, ?
author/company : Monarch Data Systems
available..... : ?
package....... : BASIC compiler
features...... : ?

- Advan BASIC (disk)
version, year : ?, ?
author/company : Advan Language Designs
available..... : ?
package....... : BASIC compiler
features...... : ?

- Atari 800 Basic (disk)
version, year : 1.0, 1981
author/company : Microsoft
available..... : ?
package....... : ?
features...... : ?

- Atari BASIC (cart)
version, year : Rev.C, 1983
author/company : Atari
available..... : standard ROM in Atari XL/XE
package....... : BASIC interpreter, manual
features...... : pretty plain BASIC implementation

- Atari Microsoft BASIC II (cart)
version, year : ?, 1991
author/company : Atari
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC A+ (disk)
version, year : 3.05, 1981
author/company : OSS
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC XL (cart)
version, year : ?, ?
author/company : OSS
available..... : ?
package....... : BASIC interpreter
features...... : ?

- BASIC XE (cart)
version, year : ?, 1985
author/company : OSS
available..... : ?

package..... : BASIC interpreter
features..... : ?

- Turbo Basic XL (disk)
version, year : 1.5, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package..... : BASIC interpreter, compiler (V1.1)
features..... : ?
Published in the German magazine "Happy Computer".

c) C

- ACE C (disk)
version, year : ?
author/company : John Palevich & Ralph Walden
available..... : ?
package..... : ?
features..... : ?
This is a newer version of 'Deep Blue C'.

- C/65 (?)
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
Probably derived from Dr.Dobbs "Small C". Compiles to 6502
code which emulates the 8080 instruction set.

- C65 (?)
version, year : ?
author/company : Keith Ledbetter
available..... : ?
package..... : ?
features..... : good macro assembler
This compiler does not support structs.

- CC65 (disk)
version, year : 1989
author/company : John R. Dunning
available..... : www.cc65.org
package..... : compiler, linker, assembler, librarian
features..... : ?
Public domain compiler. Also used as cross compiler.
Relocatable object linkage files, and the most thorough
K&R C for the 8-bit. Comes with an relocatable assembler.

- CC8 (disk)
version, year : 2.3
author/company : John Palevich & Steve Kennedy
available..... : ?

package..... : Compiler
features..... : ?
ACE C with more "real" C support (e.g. arrays of pointers
to structs). Requires ACE C runtime libs and linker.

- Deep Blue C (disk)
version, year : 1.2, 1982
author/company : John Palevich, APX
available..... : ?
package..... : Compiler, Linker
features..... : ?
Deep Blue C was originally an independent product, but it
then became available from APX. It converts C to pseudo-
code and then interprets the pseudo code (8080 instruction
set emulation).
Drawn from Ron Cain's public domain C-compiler (Small-C).

- DVC C (disk)
version, year : 1.05, 1985
author/company : Ralph E. Walden
available..... : ?
package..... : Editor, Compiler, Optimizer, Linker
features..... : Quite user friendly program
The compiler generates special object files (.CCC)
which can be optimized and linked. The package uses a
special DOS called DVC DOS which contains runtime stuff.

- LightSpeed C (disk)
version, year : 1.08, 1986
author/company : Clearstar Softechnology
available..... : ?
package..... : Compiler, Optimizer, Linker
features..... : ?
Runs under CLI DOS's and MENU DOS's.

- Tiny-C
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
First sold C compiler by OSS. This compiler was used to
compile itself! First true language "bootstrap" on any
8-bit machine (it was also available for Apple and CP/M
machines). Derived from Dr.Dobbs "Small C". Compiles to
6502 code which emulates the 8080 instruction set.

d) PASCAL

- Atari Pascal (disk)
version, year : 1.0, 1982
author/company : APX

available..... : APX-20102
package....... : ?
features...... : ?

- Draper Pascal (disk)
version, year : 2.1, 1989
author/company : Norm Draper
available..... : ?
package....... : ?
features...... : ?

- Kyan Pascal (disk)
version, year : 1986
author/company : Kyan Software, APX
available..... : ?
package....... : editor, compiler, linker, macro-assembler
and manual
features...... : ?
Kyan Pascal would run off a single floppy. The Atari (APX)
version needs two drives. A version which runs entirely in
128k should be available too.

e) LISP

- INTER-LISP/65 (disk)
version, year : 2.1, 1981
author/company : Special Software Systems, DataSoft
available..... : ?
package....... : ?
features...... : ?

f) FORTH

- ValForth (?)
version, year : ?
author/company : Valpar International
available..... : ?
package....... : ?
features...... : ?

- Extended fig-Forth (?)
version, year : ?
author/company : APX
available..... : APX-20029
package....... : ?
features...... : ?

- fig-Forth (disk)
version, year : 1.4s
author/company : ?
available..... : ?
package....... : ?
features...... : ?

- fun-Forth (?)
version, year : ?
author/company : APX
available..... : APX-20146
package....... : ?
features...... : ?

- Grafik-FORTH
version, year : ?
author/company : ?
available..... : ?
package....... : ?
features...... : ?

- QS Forth (?)
version, year : ?
author/company : Quality Software
available..... : ?
package....... : ?
features...... : ?

g) PILOT

- Atari PILOT (cart)
version, year : 1980
author/company : Atari
available..... : ?
package....... : ?
features...... : ?

h) LOGO

- Atari LOGO (cart)
version, year : 1983
author/company : LCSI, Atari
available..... : ?
package....... : ?
features...... : ?

i) All the rest

- Action! (cart)
version, year : 1983
author/company : OSS
available..... : ?
package....... : compiler, editor, monitor and library
features...... : fast compiler which generates good code
Needs cartridge for runtime procedures. A PD runtime
library is also available.
All variables are static, so recursive routine calls
are not possible. No floating point type (though a
PD library should make this possible). No arrays of
objects (arrays of POINTERS to objects are possible).

- Quick (disk)
version, year : 2.0, 1990
author/company : Raindorf Soft
available..... : ?
package..... : ?
features..... : ?
This is the "poor man's Action!". Same restrictions as
Action! apply also to Quick. Further restrictions are:
only simple assignment expressions, no records and no
pointers.

- Test Computer Language (disk)
version, year : 2.2, 1985-1990
author/company : D.Firth
available..... : public domain, ?
package..... : compiler and editor
features..... : ?

Subject: 8.4) What cartridges were released for the Right Slot of the 800?

Gene posted this list on 22 Jan 2001:

Austin Franklin Austin 80 Console Software
Eastern House KISS
Eastern House Monkey Wrench
Eastern House Monkey Wrench II
Geminisoft/Sar-An Magic Dump
Geminisoft Magic Dump II
Radical Systems Cartridge Maker (eprom burner)

Then Larry White added on 26 Jan 2001:

And the first commercially released right cartridge, the "Block" -- which was
also the first cartridge "backup" program hardware device.

Subject: 8.5) What games support 4 or more simultaneous players?

contributors to this section:
Jeff M Lodoen, Vidar \"Hawk\" Olavesen, Pat Mulvey,
Steven E. Posey (Party Quiz controllers description), Andreas Magenheimer

The following games support 4 player head-to-head play. Remember, only the
400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor,
Thorn EMI Soccer, Major League Hockey

The following support 8 players on the 400/800 or 4 on the other computer
models, using the 2 controllers-per-port CX30 Paddle controllers:

Super Breakout, Worms?

The following supports 4 players on all machines, using special 4-button keypad controllers linked together with RJ-11 jacks (standard phone jacks) to a box with 2 joystick port connectors.

Party Quiz by Suncom

Andreas Magenheimer contributes the following:

- Networking 1-8 players/computers games:
Dataque once (1989-1992) developed a Network game+cable which lets you connect 1-8 A8 computers together. The cable (octagon or so) could be selfmade or bought. The game avaiable was Maze of Agdagon (shareware from the Agda Group/Dataque). Maze of Agdagon worked on all 8Bit Ataris with a minimum of 48k RAM. In 1999/2000 Bewesoft discovered this and developed the game Multidash which is network-compatible to the previous game, i.e. it can use the same network cable. But, because of its interlaced grapic mode Multidash will only run on XL/XE computers. Therfore Jiri included a good Gr. 8 picture how to built an easy network cable for 2 players/computers (using a SIO cable as a nullmodem cable!) and an -not so easy - network cable for 2-8 players/computers. The game and its text+picture was released as freeware; it can be found on the internet or the abbuc magazine...

in short: networking games with 1-8 players: a) Maze of Agdagon
b) Multidash

- multi-joystick games:
In 1999/2000 L.Sterba (or so) developped some hardware to connect 8 joysticks to one XL/XE joystickport (or 16 Joysticks to both ports). He also developed a game for this, named ... (tricky czech name!), which is a sort of multi-player TRON game... Screenshots are avaiable at Mr. Sterba's Homepage (URL?) and maybe soon at ABBUC magazine... (it has been tested at the ABBUC JHV!)

Subject: 8.6) What programs run only on the 400 and 800 models, and why?

The following are reported as incompatable with models other than the original Atari 400/800. Most probably do work on XL/XE's if you use a translator to run the original 400/800 OS on your XL/XE.

Apple Panic Broderbund
Aquatron Sierra On-Line

Konrad M.Kokoszkiewicz writes:

XL/XE software won't work on 400/800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 8.7) What programs make use of the Light Gun or a light pen?

Bertrand M. (LEXX) writes:

Bug Hunt, Barnyard Blaster, Crossbow, Crimebuster, Operation Blood, Operation Blood II - Special Forces (not completely sure about that one), Light Gun Blaster (PD), Gangsterville (Italian game written in BASIC), maybe a couple more...

James Bradford mentions:
"On the 400, the light gun /pen will only work in joystick port 4." This renders much light gun and light pen software unusable on the 400.

Andreas Magenheimer adds:
all Lightgun games can be used with a lightpen (which is not as accurate as a Lightgun however). And: all lightpen games can be used with lightgun. thus add:
- Atari Graphics (Atari) Lightpen graphic software
- 5 Matrix or Matrix 5, a PD game...
- Alien Invaders (DGS) a Space Invaders clone from the brits...
- Bembelwo (Thorsten Butschke) a sort of golf/minesweeper game, written in Quick and PD!
- Sharp Shooter (Mat*Rat) a PD game from Analog, also avaiable on cart from Video 61/Lance Ringquist
- Lightgun Shooter (ABBUC mag.) a simple shooter game, at least PD!
- Flyshot (or Flyshoot) a Turbo Basic game (PD) from ZONG, the KE Soft mag.

Geisterschloss by KE Soft, 1992

Subject: 8.8) What programs have a track ball mode or support a mouse?

Andreas Magenheimer writes:

Title	Keystroke Required
Missile Command (Atari)	CTRL-T
Slime (Synapse)	[T]
Shanghai (Activision)	choose controller type: ST mouse ! (plug it into port 2; if you do not have one, you have to reboot!!)
Bombdown (Roemer of Uno)	choose between Joystick, Amiga mouse, ST mouse or CX85 numeric keypad (use port 2 for any mice)
Minesweeper (PPP/PD-World Versand)	use an ST mouse in port 2
The Brundles (KE-Soft/Kaisersoft)	use an ST mouse in port 2
The Brundles Editor (KE-Soft, PD)	use an ST mouse in port 2
Geisterschloss/Ghost Castle (KE-Soft, PD)	choose Lightgun (port 1) or ST mouse (port 2)
10-12 games from ZONG magazine	ST mouse games !! (they use port 2 (KE SOFT, now PD) and a driver called KEMAUS.COM)
Multi-Mouse manager (PD/shareware)	drivers for mice, TB, etc.
Unriagh I (german PD adventure)	has drivers for ST mouse+Joystick

(stick=port 1, mouse=port2)
Unriagh II (german PD adventure) has drivers for ST mouse+joystick
(stick=port 1, mouse=port 2)
little Calculator (AMC-Verlag, PD) uses mouse only (port 2)
big UPN calculator (PD) uses ST mouse, TB, Touch tab. and
joystick; (there are different COM
files, rename the one you wish to
use to *.EXE; all drivers use port
1 - if I remember correctly)
Operation Blood (ANG/Mirage) press mouse fire or Select to start
in ST mouse mode (port 2)
Operation Blood 2 / Special Forces press mouse fire or Select to start
(ANG/Mirage) in ST mouse mode
Sprint XL (ABBUC Jahresgabe 1992) uses an ST mouse in port 2
M.O.S. (ABBUC magazine) uses an ST mouse in port 2
Multi-(Tasking-)Operating-System,
Diamond GOS (Reeve software) Version 1.0 (disk), 2.0 & 3.0
(cart.)
support an ST mouse in port 2
S.A.M. (Power per Post) german GUI, supports an ST mouse in
port 2
G.O.E. (TCS) supports an ST mouse in port 1

RE: Missile Command, Andreas writes:
there are many different versions avaible... I know the old Atari 800
cart version, which works correct with Joystick and Trakball, but not at
all with a mouse. The newer XL version works with Mouse, trackball and
Joystick, also the newest (built-in) XEGS version of MC. But, there is
also a tape version (and maybe a disk version) of MC avaiable. I am not
sure if this tape version behaves like the old 800 version or like the
newer XL and XE/XEGS versions...

And about mice, Andreas adds:
Maybe you did not know, there is a little difference between Trackball
and ST-mouse. Although MC works with both input devices does not mean,
they are the same. they are not !! Connect the TB to an ST computer and
you see: it does not work at all !! You have to do a small conversion to
convert the TB to an ST mouse. (Plans are avaiable from ABBUC, germany).
maybe somebody already did this with Harvey`s TB (and to make things
worse: the old Atari 800 version does not support a mouse; so if the TB
has been converted to a mouse this MC version will not work with it!).

Subject: 8.9) What programs have a paddle(s) or Koala Pad mode?

Andreas Magenheimer contributes:

- Super Breakout (Atari) breakout clone
- Live Wire (Analog) tempest clone
- Live wire 2 (Analog) tempest clone
- Planetary Defense (Analog)

- Pong (Antic) Pong clone
- Pong (Analog) Pong clone
- Super Ball (Compy Shop Magazin) Breakout clone
- Arkanoid (Taito/Imagic) Breakout clone
- Koala/Micro-Illustrator (Island graphics/Koala Ware) graphics program
- Chiseler (Antic or Analog) a breakout clone
- Slime (Synapse) a slimy shooter...
- Chicken (Synapse) catch the chicken eggs...
- many more dozens of Pong and Breakout clones
(forgot their names, maybe someone can help here!)
- many more programs (which I do not remember right now!)

Subject: 8.10) What programs have a CX85 mode?

Andreas Magenheimer writes:

- Multi mouse Management (PD)
- UPN calculator (PD)
- the Bookkeeper (published by ???)
- Bombdown (Roemer of Uno)
- many games from KE-Soft and Powersoft
(forgot their names, help needed!)

Subject 8.11) What programs have a Touch tablet mode?

Andreas Magenheimer writes:

- Atari Artist (Atari) graphics program
- Pixel Artist Deluxe 1.3 (PD) graphics program
- The Brundles (KE-Soft) Lemmings clone
- many more (which I do not remember right now!)

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, .XFD, .SCP, and .DI disk image formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Image format invented by Bob Puff, for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.
DCM specs at: http://home.planet.nl/~ernest/diskcomm.zip

ATR - Image format invented by Nick Kennedy, for his SIO2PC project.
Used with most 8-bit Atari emulators running on other computer platforms.

XFD - Image format invented by Emulators Inc, for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used with ST Xformer and PC Xformer emulators.

PRO - Image format invented by Steven Tucker, for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

SCP - SpartaDOS SCOPY image file.

DI - Image format invented by Kolja Koischwitz & Christian Kruger for their
800XL DJ emulator for the Atari ST.

One tool for converting among all of these disk image formats is:
Acvt v1.06 by Jindrich Kubec
Latest version can be found at http://www.asw.cz/~kubecj

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load files. Like .xmo, use of .bin is discouraged.

Subject: 9.5) How can I make my commercial boot disk (tape, cart) into a load file or disk image?

Russ Gilbert writes:

The disk image part is a matter of taking a copyable boot disk and making an atr, xfd, dcm or other disk image type file out of it, usually for use with an emulator. Before emulators, the Bob Puff .dcm format was used to store/archive/retrieve boot disk images.

Almost all commercial software for the A8 is/was copy protected. For boot disks, this usually involved a large number of special formatting that couldn't be copied using ordinary sector copiers. Usually the boot process involved checking to see if a certain sector error occurred, then proceeding. If the error did not occur, the disk was a copy and would not work.

For carts, usually the method of protection was to write to the cart area of memory and see if the value changed. If the value changed, the cart program was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption, which must be decrypted before the program can run. This to make more difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE Pro system, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE registered version software, thus backing up your original disk software. Note the 'Pro' image will only be of use to person(s) owning registered APE software and 'Pro' adapter cable.

Subject: 9.6) How can I convert my commercial boot tape into a cassette image file?

Ernest R. Schreurs writes:

For those of you that like ALL classic Atari software, there is now a way to store all software that has been recorded on cassette tapes on the hard disk of your PC. I have written a program that is similar to the SIO2PC utility written by Nick Kennedy. But this one is intended for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free disk space to work with. The sound card should be able to sample sound at a sample rate of 44.100 Hz mono. The sample must be recorded into a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file. The .cas file is a digital cassette image file that only contains the data that is on the cassette tape. Once you have that, you can throw away the .wav file. The .cas files are typically 16 to 64K, so they are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette image) you do not need a sound card. You do need a SIO2PC cable or similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives of Umich by now. They have been put together in one zip file wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file format as of version 1.15 of APE. It looks real neat, so try that out too! Thanks to Steven for adding a nice user interface for these cassette images. He did a nice job. I am hoping other using are willing to write some programs to get more enjoyment out of this underrated storage medium.

My stuff is available totally free for personal use, so I hope you enjoy it. Read the docs about the conditions.

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an Atari-format diskette. The following require a DOS and disk drive on the Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

Ataridsk V1.2 (c) 95-12-09 by HiassofT (Matthias Reichl)
http://www.horus.com/~hias/atari/

MyUTIL and the XF551 - tips from JTKIRK:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from Hans Breitenlohner:

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main

crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Apparently 2.07 is buggy.
Anadisk 2.06 is available at: http://ch.twi.tudelft.nl/~sidney/atari/

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to Preston Crow:
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) How do I transfer files using a null modem cable?

This section by Russ Gilbert.

Q: How do I connect two cmputers using a null modem cable?

A: You need a term program and RS 232 ports on both computers. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 baud, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25 pin port. 25 pin #2 goes to Atari #4 (XMT to RCV), 25 pin #3 goes to #3 on Atari (RCV to XMT) and #5 of 850 goes to #7 of 25 pin (GND to GND).

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go to the left 1 to 13 then #14 is under #1 and left again so that #25 is under #13.

Most term programs allow a null connection, without a carrier detect. Notably, 'Express 850' does not. I have only used 'Procomm 2.4.3' (the last shareware version of Procomm) on the PC and Bob Term on the Atari, but other term programs may work.

To check your null modem connection, start both PC and Atari term programs, set baud to 2400 or 4800 on both computers. No parity, 8 data bits, 1 stop bit on the PC. Be sure to use the correct COM port on the PC. Go to 'terminal' mode and you should now be able to type on either computer and see it on the other screen. To accomplish a file transfer, use Y-modem probably from Bob Term, rather than X-modem. X-modem will often append bytes to a file transfer, an undesirable event. There is also a very nice Z-modem recieve program for the Atari, called AtarZmodem by Larry Black for the Atari.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors (Radio Shack) some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modems and plugging in the null modem cable into the two modem cables. This also avoids the confusion of variations in the computer ports. Most computers connect into the modem end via a standard RS232 DB25 connection. With this both ends 25 pin cable, you would cross pins 2 and 3 and connect the #7s together to make a null modem cable.

The SIO port on the Atari cannot be used directly. An 850, P:R: connection, MIO, Black Box or similar device that provides an RS232 port must be used.

Following are pin assignments for a DB25 pin RS 232 C port.
1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

For higher speed connections, above 4800 or 9600, you need the flow control lines and Atari term software that has flow control built in. You also need an MIO or Black Box, which uses the PBI (parallel bus). A high speed cable would need not only XMT, RCV, and GND, but also flow control lines. I suggest a commercial null modem from computer store to ensure correct lines. A null modem is a small adapter with the correct lines already crossed. I don't know how to correctly connect the CTS, RTS, DTR, DSR, CRX lines for a high speed null modem. With a null modem, you just plug it into the 25 pin connectors of the two modem cables you might already have connected to your Atari and PC or Mac. You may need a straight thru 25 pin gender changer also.

Following is in this FAQ elsewhere, but I summarize here: (Figure out or look for pin numbers on the ports.) Note that these are pin assignments, and NOT null modem connections with the XMT, RCV crossed and GND straight thru.

Atari 8-bit PC AT 25 PC AT 9 pin
---
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8
9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin and a Atari 8-bit 9 pin cable connector. eg. If you check continuity from pin 3 of 25 pin end and it goes to pin 4 of nine pin end, you have an Atari serial cable. If pin

3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)
(DTE = Data Terminal Equipment ie. your computer.
DCE = Data Communications Equipment ie. your modem.)

Subject: 11.4) What is SIO2PC?

From the SIO2PC home page, written by Nick Kennedy:

SIO2PC is a hardware & software package interfacing the 8-bit Atari to PC
compatible computers.

The original idea was to have the PC emulate Atari disk drives so Atari
programs could be stored on the PC's hard (or floppy) drives. It turned out to
be quite successful. About 95% of my work was in the software, but a hardware
device to convert logic levels was also necessary. This device is now commonly
referred to as an SIO2PC cable.

Features:

Emulates 1 to 4 Atari disk drives

Store your Atari files on PC hard or floppy drives

Boot from the PC, real drive not needed to start-up

No software or drivers required for the Atari;
no conflicts: use your favorite DOS

Twice as fast as an Atari 810 drive and more reliable

Co-exists with real drives in the Atari daisy chain

Compatible down to the hardware level: use sector copiers, etc.

Print-Thru captures Atari print-out and routes to PC's printer

Convert Atari files to PC files and vice versa

1050-2-PC version connects PC directly to Atari disk drive

Nick Kennedy
http://www.cswnet.com/~nkennedy/

Another source for building SIO2PC cables is Clarence Dyson's page at
http://www.redshift.com/~cdyson/atari.html

Subject: 11.5) What is the Atari Peripheral Emulator (APE)?

David A. Paterson writes:

"Steven J. Tucker took SIO2PC one better and wrote new software. The Atari Peripheral Emulator (APE for short) lets your PC act as high-speed drives. It lets you print to your PC printer. And it lets you use your PC modem on the 8-bit."

The APE ProSystem goes even further. The ProSystem has two components:

- The program PROSYS.EXE is used to create the protected and unprotected disk images which are then used by APE.

- The ProSystem hardware is a device designed to allow direct connection of a stock 1050 disk drive directly to a PC for use by the PROSYS.EXE software.

APE home page: http://www.nacs.net/~classics/

Subject: 13.19) What's the difference between ASCII and ATASCII?

David Moeser produced this nice translation table.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)
==========

Subject: 15.1) How did Atari get it's name?

Graham Thornton types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are theirs, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 15.2) What is the History of Atari?

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor.

ATARI BASIC: (according to Atari BASIC Sourcebook)
Paul Laughton and Kathleen O'Brien - Most of Atari Basic
Paul Krasno - Helped with Trnscendental routines
Bill Wilkinson - Designed Floating Point Scheme
Bob Shepardson - Modified IMP-16 Assembler to accept special syntax tables
Paul invented
Mike Peters - Key punching and operating

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

This extremely long URL leads to Atari's patent for the 8-bit Atari computer:
(thanks Rick Cortese)
http://164.195.100.11/netacgi/nph-Parser?Sect1=PTO2&Sect2=HITOFF&p=2&u=/netahtml/search-bool.html&r=94&f=G&l=50&co1=AND&d=pall&s1=atari.ASNM.&OS=AN/atari&RS=AN/atari

All Atari computers are tested at the factory by a master computer called the Atari Sentinel System.

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(
Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Atari Games was acquired by Midway on March 29, 1996.

January 2000: Atari Games Corp. is renamed Midway Games West.
The last coin-op game with the Atari Games logo: San Francisco Rush 2049, released in 1999.

TODAY
Midway Games West Inc., the former Atari Games Corp., remains a unit of Midway Games.
The following URL remains active: http://www.atarigames.com/
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985.

Eastern Europe sees the 800XE instead of the 130XE and 65XE, at least initially.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system.

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which is a subsidiary of Hasbro, Inc., for $5 million in cash.

(JTS filed for Chapter 11 Bankruptcy Protection on December 11, 1998, and then converted it to Chapter 7 on February 28, 1999)

Hasbro Interactive produced games for several platforms, including PCs running MS-Windows. Some of Hasbro's games, including several re-makes of classic Atari titles, were marketed under the Atari label. The Atari Interactive brand was termed "a Hasbro Affiliate."

2001
On January 29, 2001 Infogrames Entertainment announced completion of its acquisition of Hasbro Interactive from Hasbro. The purchase included the Atari titles and intellectual properties.

TODAY
Atari is a label of Infogrames Entertainment.

Founded in 1983 and headquartered in France, Infogrames Entertainment SA is a global publisher and distributor of video games for consoles (Sony, Sega, Nintendo, and Microsoft), personal computers and Macintosh systems, as well as interactive digital television platforms, mobile smart devices (WAP, HDML) and in-flight entertainment systems. The company's award-winning franchises include Alone In The Dark, Driver, Deer Hunter, Roller Coaster Tycoon, Test Drive, and Unreal. Infogrames' Humongous Entertainment division is a leader in children's entertainment software and its Macintosh publishing label, Macsoft, is the number one publisher of Macintosh entertainment software. With Infogrames Entertainment SA's recent acquisition of Hasbro Interactive, Infogrames now boasts a line of software based on well-known licenses such as Monopoly, Jeopardy, Tonka, and Atari.
http://www.infogrames.com/ .

The Atari website: http://www.atari.com/

Atari currently (9/00) markets:
Atari Arcade Hits 1 & 2
Breakout
Centipede
Frogger
Glover
H.E.D.Z. - Head Extreme Destruction Zone
Missile Command
Nerf ArenaBlast
Pong
Q*Bert
The Next Tetris

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

Back in the mid '80s, I zapped an MPP 1150 printer interface when a fellow TACE member brought over a U-Print 64 interface with spooler for testing; the system was already up and we just swapped them. All of the details are a little foggy now as to which end of what was connected where, but I can still hear the small static 'pop' and I know the nearly new MPP never printed again and I haven't done another hot swap.

What signals and voltages are on the SIO bus of an idle system which could harm component chips during a hot swap? And would a 13 pole double throw switch allow one to toggle between 2 drives or 2 cassettes or 2 printer interfaces with no harm? Would one of the pins need an isolating resistor or something?

-Ron

Experience is something you don't get until just after you need it.

Maybe someone has a copy and is willing to share :)

On the Percom, was rather balky at first, but then I remembered I
could set the drive status via an OS/A+ command and since it works
great ! Need anything copied ?

Hate it when that happens....

> What signals and voltages are on the SIO bus of an idle system which could harm
> component chips during a hot swap? And would a 13 pole double throw switch
> allow one to toggle between 2 drives or 2 cassettes or 2 printer interfaces
> with no harm? Would one of the pins need an isolating resistor or something?

The voltages are all TTL signalling levels, but as far as I know they
are not buffered with series resistors (my schematics are buried
somewhere..). +5 is available on the SIO bus with limited current,
something on the order to 10-30ma or so- enough to power MAX232 type
chips for SIO2PC, but not much more than that. But, the SIO bus
wasn't designed for connecting while powered, there could well be
surge currents or voltage spikes when the cable is
connected/disconnected. A series 13-pole switch would probably not
fix the problem, as its pretty much just duplicating the plug/unplug
model. If you really wanted to make the sio bus safe for this, series
resistors & filtering caps to ground on all the signal lines would
probably do it. The signalling rate is very low, so unless the
components really load the wire you wouldn't notice too much.

A fancier approach would be to use 4066 or equivalent analog switches,
they are 4 channel spst switches, each channel controlled by a +5
input- turn it on & the "switch" connects, bidirectionally and for
analog signals too, so it wouldn't interfere with the tape audio
channel. They do add about 100 ohms series resistance when on & their
bandpass is limited to about 1 megacycle, but that shouldn't matter
too much in this case.

But, if you can ensure the ground lines connect before the signal
lines do, then simply plugging & unplugging should be OK. If you
ensure all the grounds are shared, then use your switch technique for
all the non-ground wires, AND include decoupling caps to ground on all
the wires (to bypass voltage spikes), then things ought to work out.

The "snap" you heard could have been a voltage potential existing for
whatever reason between the grounds of the 2 devices, it doesn't take
much to destroy semiconductor circuits- particularly those of the
Atari's vintage.

2850. Disk image of the Broderbund game "Spelunker"

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-06 04:11:55 UTC
From: Sean <ironhead@home.com>
Message-ID: <bek9ft87ce3790hhqh8s5u67bnv63nh1ad@4ax.com>
Source record: 36974

Of all the games I had for the Atari XL, Spelunker was one of my favourites, but was also one of the most difficult....it was VERY easy to mistake and lose a life. This wasn't too much of a problem as I had a copy that was cracked to give infinite lives. I have been playing this game recently using the Atari800win emulator, but none of the Spelunker disk images I have found are cracked, which means I can't get very far into the game. I had forgotten just how easy it was to die.....fall off a conveyor belt...fall off a rope....get bounced off a spike in the ground and fall through a hole in the cavern....aaargh!!

Anyways, does anyone have a cracked disk image of this game they could email me, or is there some way to hex edit the disk to give infinite lives? Any help would be greatly appreciated as I'd really like to play this game to the end again, which isn't going to happen with only four lives and my less than precise control. Thanks!!

I don't have a cracked copy, but I do have some advice.
Use the "save state" feature of the emulator. Pick an
opportune time to save the state...do it regularly...and then
when you die, load the save state. I have finished Spelunker in
an emulator with this technique, and also, recently, "Arex"
(although that one just wraps after level 32) and even "Exodus,
Ultima III". Works great.

Message-ID: <3AF58CF4.CD273279@bellatlantic.net>
Source record: 36977

Hello, I've recently gotten an xegs and was wondering
if there's a relatively simple way to permanently disable
basic? I also put a 6ft extension cable on the keyboard,
neat! If only I could put the four console buttons on the
keyboard. Please carbon copy any replies to my email,
as I can't check here often.Thanks in advance!

Hi all,

I have a bunch of Atari 800 stuff;

couple of plotters
monitor
1050's
power supplies
extra boards for 800
cables
at least 2 800's modified 128k I think, one working
disk drives at least two or three working
manuals
some programs on disk

Its some were around 4-6 six boxes of stuff. I woun't be able to get to it right away, but what I would like to know is there a market for this stuff or should I just deep-six it when I empty the shed and garage?

What if the 2 devices were both connected to the switch cold and toggled several times before booting the system? Would everything equalize enough to protect those 2 if nothing else were swapped onto the circuit?

Or what about somrthing like 13 SPDT's so you could switch the ground before the other lines? Could that reduce the probability of zapping a chip? I once knew a gent with 7 DPDT's between 2 410 cassette drives who moved a lot of data with no damage.

>Greg Menke gregm-news@mindspring.com replied:

I never had an original disk, just the executable; it was 800 only without a translator because of calls to the EGETCH & EOUTCH routines in the old OS so I used a sector editor to make an XL/XE version. If no one locates it, I can get those to you.

What does OS/A+ do that MyDos 4.5 cannot for configuring that drive?

Source record: 36985

Hi guys.

I have a few old games on tape that I'd like to recover (Specialy "Mercenary: The Second City", which appears to be a lost title, since I can't find it anywhere).

I need to buy a new tape reader for my 800XL because my old 1010 dataset is broken. Questions:

1. What do you recomend for the job ? A XC12 or a 1040 or what else ?

2. Is there a program that can read a WAV copy of the tapes, as read by some HI-FI stereo, and decode the binary? If not, where can I get info on the frequencies used so that I can write such a program, if needed ?

3. The Second City, if I remember well, is quite difficult to load; It has multiple sub-loaders and non-standard SIO blocks. Do you antecipate any problems that I'm not thinking of ?

4. Does anyone has a disk copy of "Mercenary" and "Mercenary: The Second City" ?

Thanks very much for your help.

Pedro Fonseca

Early 410's were a little flaky but I have some later ones which just keep
going...

>2. Is there a program that can read a WAV copy of the tapes, as read by some
>HI-FI stereo, and decode the binary? If not, where can I get info on the
>frequencies used so that I can write such a program, if needed ?

Partly answered in a previous post and check the 1st year or so of Antic:
http://www.atarimagazines.com/
Their Tape Topics series covered a lot of the details on the Frequency Shift
Keying (FSK) methods used.

>3. The Second City, if I remember well, is quite difficult to load; It has
>multiple sub-loaders and non-standard SIO blocks. Do you antecipate any
>problems that I'm not thinking of ?

Those protection methods may very well make duplicating it difficult, but only
a little testing will reveal how the WAV format translates.

Moving data through the system should have no harmful effect on the components
in the cable. Only a malfunction in the PC or the 800/XL/XE should damage it.

It certainly seems like something has changed and that the failures are due to
some recent glitch in the cable even though 60% were not great stats; did you
ever try the SIO2PC software running in pure DOS command mode?

The ProSys and 10502PC are only required to talk directly to the drives withOUT
the A8 computer; your cable should write real disks just fine when an 800/XL/XE
is attached.

What you need to do is jack a regular tape deck to your PC and using
something like cooledit96, record the tape into a wav file. There is a
program out there called wav2cas that will encode the wav. Do a search
unless somebody here knows the link for the program. I've been using a 1010
recorder and it works very well. I have mercenary on disk but alas my SIO2PC
cable fried on me and it'll be a while before I can post any ATR's.

It is one chip 1489 (CMOS) version. The small "something" is a diode (1N4148
to be precise) allowing you to use the cable AND your real drive connected to
A8 computer at the same time..
If the cable i sold you stopped working why dont you send it back to me - you
will have a replacement in a few days.

I don't think that hub ring is that big a deal. I remember on my first
computer an old apple2 clone way back when disks were real expensive. I
bought some disks without the hub ring and they worked just fine for me.

And yes I do also have an Atari. 8-)

Well what I meant to say is that it used to read 100% all ATR's, it would only write 60% successfully. I've always used APE for DOS 1.17 (i think) and I've always booted to a command prompt only on the PC, no windows. When I first got the cable, I tried APE for windows with no success, I'm thinking it was an IRQ conflict. But the DOS version has always worked well until now. I may wind up building another one myself, this one I bought from a guy in poland and I'm not sure what design he used other than it's a one chip (p9512ad d514c89an). It also has a small resistor (i think). I wish I had studied electrical engineering instead of smoking in the boys room!

I did and 'invincible' cheat a while back, I'll see if I can find it
again.

Btw, you do know that Spelunker beta (the mine entrance / no intro)
version does NOT work on Atari800win (or plus) at the moment unless
you use 2.5a or before.

The release version works great..

Source record: 36851

Subject: 7.6) Are there Graphical User Interfaces (GUIs) for the Atari?

this text to expand!

1) Diamond DOS (cartridge). Try to find version 3.

2) Screen Aided Management (SAM). Available from DGS,
http://www.dgs.clara.net/

3) BOSS, by Mirko Sobe. http://www.atarixle.de/

Ok, let`s add:
- Diamond GOS version 1 (PD disk version), version 2 (cart), version 3 (cart); plus some applications (painter program, text program, etc.); Diamond GOS has been made freeware by the author Alan Reeve;

- G.O.S., the Graphic operating system by Total Control systems; two different versions are avaiable (I call them GOS 1 and GOS 2) and they are PD;

- G.O.E., the Graphic Operating Environment also by Total Control Systems (this one merely works under Sparta DOS, not with Bewe-DOS and not at all with DOS 2.x); so far I have found 3 different versions (GOE 1,2,3) with some applications (graphic/painting program, etc.); PD;

- S.A.M., the Screen Aided Management (unfortunately it has the same name as SAM, the software aided mouth) from PPP/Germany. It is avaiable in two different versions: a) the type-in listing from Atari magazin and/or the Lazy finger disks (which are PD!) or b) the commercial version 2.0 which has many add-ons and can still be bought from Dean Garaghty/UK or PD-World-Versand/Germany; This GUI merely works correct under DOS 2.5 and Medium/dual density, however...

- Boss XL, the XL-Desktop from Mirko Sobe; written in Turbo-Basic; freeware;
- Boss XE, the XE-Desktop from Mirko Sobe; written in Turbo-Basic;freeware,
- Boss X the newest desktop version from Mirko Sobe, needs an 128k+ Computer (128k or more memory), supports MyDOS up to 16MB and MyDOS subdirs...; still written in Turbo-Basic; many applications and drivers; freeware;

- XL-TOS a small and "cheap" GUI version from Atari magazin (i.e. a type-in listing; the basic file, which consists of many data lines creates a short object code file); unfortunately this GUI only looks good, it loads almost nothing...

PD;

- ST-TOS a small basic program, that looks like a GUI; it can merely load Basic files and do a few DOS commands, like lock, unlock, delete and such... (PD)

- Basic desktop, a GUI written in Basic just as a sample, what can be done with an 8-bit computer; this one loads basic and text files (maybe also ML files); PD;

- DCS, the desktop construction set from Tom Hunt; there are 3 different versions avaiable, a) for DOS 2.5, b) for MyDOS andc) for Sparta-DOS; I have tested the Sparta DOS version, which worked with batchfiles and could easily load some ML files, text files and basic files (which were already on the DCS disk); it also works with high densities and/or hard disk partitions up to 16MB and supports subdirs of course; hmm, freeware or shareware ?!?

- there are a lot more GUI programs, however many of them are written in Basic or Turbo Basic and are very restricted; most of them merely look like a GUI but need to much memory for everyday use. Thats why most users still prefer those DOS or Gamedos (Gameloader, Multiloader, etc.) programs... Andreas Magenheimer.

Spelunker!! I really enjoyed that game and finally finished it years back.

I have a modified version which gives you unlimited lifes. But it's still a challenge!!

Right now I don't have my Atari 8-bit system out of storage.
Presently, I'm trying to find the best way to transfer my 8-bit files over to my Atari MegaSTE or Atari Falcons.
I have a cable that was specially made to connect a 1050 drive to a ST. A few years back I did try using it but ran into some problems. I was trying to use either a Happy 1050 or an ICD DD 1050, not sure if this caused the problems or not.

I still have the Cable, Does anyone know a way I can check the cable with a Multi-Meter to make sure it's in good shape?

I need a diagram or text file that describes the way the wires in the cable are connected.

I also have an IB Drive for the Atari ST/STE that uses 5 1/4 floppies like the Atari 8-bit Does. I've only had it a short time and have never used it yet.

Does anyone here have experience with the IB Drive and know if one can use it to transfer Atari 8-bit disks and Files over to the ST/STE?

I had two versions of this game. One was an original from the 800 days, I believe, and the other was part of the "Age Of Adventure" set, coupled with Return of Heracles. I got both to work well on my Atari 800XL; though the original did seem to have some oddities with message scrolling and dead player characters randomly popping up again after they died (no kidding, I had one game where Og would NOT die and stay dead, even if you manually removed him from the game). I THINK the latter "800XL" version also had a friendly, butt kicking NPC named Aladdin that the original didn't.

BTW, I have been working on and off on a "Gamer's Guide" for ABATFT. A stolen computer kinda set me back on the project, but I hope to finish it eventually. This is still one of my favorite mutli-player RPG's, Baldur's Gate II notwithstanding.

Now, off to impale a steel sword in a swamp rat,

It sounds like the SIO2PC rs232 driver may be blown, the level-shifter chip is driving one or more SIO signal wires. Does the 850 work directly with your Atari with the SIO2PC cable removed? If not, then its likely something is blown in the Atari. If yes, its most certainly the SIO2PC cable.

Normal use won't blow out IC's. I guess it depends on the parts used and their condition. Overvoltage, excessive soldering can degrade the chips. You could even have a broken solder joint or something. From your other reply, I've no experience with p9512ad or d514c89an devices, so aren't aware of their electrical characteristics.

Theoretically impossible to burn out other then static discharge. The power supply pin feeds the rest of the chip via a current limiting resistors. The inputs are all a couple of k resistance too. I think I read somewhere that you can get the chip into thermal overload by driving it at its inverters into dead shorts, but since the SIO2PC only uses 3 of 4 gates it would be kind of tough.

Hardware read fine and write bad doesn't make a huge amount of sense. I only say this because of the 2 way communication that goes on between the drive and the computer. There is always that
8 bit "Hey Drive #1 are you there?"
1050 "I'm here boss!"
kind of handshaking going on. Maybe with Smartdrive caching turned off it would explain it.

2885. Re: SIO2PC Headaches again....

Well the other post was right, when it's not plugged in everything works tip top. The 850's connected to my voice synthesizer so it's easy to test. What would happen when I would try to write an ATR especially copying from a real 1050 disk, is it would get halfway through and then make the dreaded buzzing noise and give me an error. As I was telling Artur the guy who made the cable (extremely nice-offered me a refund!), is that we had a storm the other night and I think my PC got surged. It's an old 486 I use exclusively for APE. Fortunately I keep the breakers turned off on the atari.

2886. Small SIO2PC problem

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-08 08:13:58 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3AF7AAC6.2D7CEDCB@asw.cz>
Source record: 36866

Hi!

I've got MAX232 version built in my XC12 tape drive. Everything works
okay except for annoying deep sound coming from the TV when the serial
cable is plugged in my PC. (also there are lighter stripes slowly going
from bottom of the screen uo).

Both Atari and PC are plugged into the same extension cable, but I still
suspect it's something we call here 'ground loop', I don't know the
correct term in English. Atari is plugged into the TV using S-Video
cable. TV is plugged into another outlet.

Is it normal? If not, what could be done against it?

It isn't. If you find a socket in anything starting with XE, somebody else put
it in, not ATARI. The XEGS has one big ROM which is shared by BASIC, OS and
Missile Command.

Why do you want to permanently disable BASIC?

2892. Re: Using Atari Disk Drive Model 1050

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-08 15:49:41 UTC
From: rhamiiton5@aol.comedy.com
Message-ID: <20010508114941.07462.00002535@ng-fx1.aol.com>
Source record: 36865

The Atari 8 drives do not have write heads and circuity which can handle the type of oxide coating used on the high density floppy media; they cannot write reliably to them. The hub ring has just become a sort of marker to distinguish the high density from the standard double density diskettes.

Way back in your apple days of '79-'82, most disks were hubless and only the really premium brands offered hubs to prevent slippage and out of round problems; you could even buy little kits for adding you own hub rings.

When the home computer swell really hit around '83 and price wars began, hub rings became common on good disks and eventually became standard down to include most generic bargain diskettes.

The introduction of high density 5.25's required a different coercivity (= magnetizability) to get more bits in a smaller space and suitable electronics to do it. These disks were produced hubless; was it a differentiating label or just unnecessary because of stronger mylar construction? Anyone?

Latest revisions were called 800 XLF and contained FREDDY for memory
management and had chroma output. Basic is revision C.

> Subject: 1.9) What is the Atari 800XE?

I don't think so. The problematic Chinese 800XEs with GTIA problems were
manufactured in 1992.

> FREDDIE:
> The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM
> address multiplexer.

I would say XEs & XEGS.

> (256).

This is questionable. There's at least one SECAM computer with SECAM
GTIA part no. C020120. On the other hand it's maybe prototype. (Curt
Vendel has it on his site).

> Andreas Magenheimer writes:

> 15x15 = 225 colors on PAL
>
> And - as said before, the bug seems also to appear with ANTIC...
> Bad luck, we PAL users... Greets - Andreas Magenheimer.

Another questionable topic. I asked Andreas about this and I haven't got
persuasive answer.
At first - ANTIC has nothing to do with colors. So it can't have any
color bug.

The colors are generated in this way: color 0 is not a color. So it
leaves us with 15 colors. Imagine it as a color circle. And each color
is generated with some shift. (360 / 15 degrees). It seems that the
value was selected incorrectly for PAL so that the first (color 1) and
last (color 15) are same or almost same.

I haven't noticed any problems with shades in graphics 9.

The other thing is real existing GTIA problem in latest revisions of
China produced XEs, where GTIA modes have problem that 2 of 4 subpixels
of pixel have invalid luminance.

> Subject: 6.4) What "vaporware" computers/peripherals were never released?
>
> 800XLF late European 800XL with a redesigned motherboard, + the FREDDIE chip

Not a proto. I've got it home, bought in 1987, manufactured at beginning
of 1985.

His name is Radek Sterba (Raster). Game is named Cervi (translates as
Worms). There's is a new game called Multris (Tetris for four players).
His homepage is: http://www.infos.cz/raster/atari

One of the SIO wires is "Audio In". Is it possible that some signal is
being coupled onto this wire?

regards...

>as an Autorun.sys. You need a MEM.SAV on the disk to go to DOS to "L"oad

One of the Atari magazines wrote a handler so that you could use SAM as a
device. I thought that was pretty neat. You could COPY a text file to it and
have it read.

Could be. The slow stripes sound like 60hz noise getting onto the
video channel. You can see the same sort of thing if you use a
camcorder to look at a tv screen.

"ground loop" is the right term. It could be leaking in via the
SIO2PC device as shielding will be weak there, and the ground
architecture between the PC and the Atari w/ peripherals is very
different. One thing you might try is to put all your devices on the
same outlet & to the extent you can, try systematically reversing the
plugs. You might hit a magic combination that reduces the ground
noise.

2898. Eprom-Burner Advice

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-08 22:18:18 UTC
From: Dan Vernon <dan@bitsofthepast.com>
Message-ID: <9d9r1o$66v$1@brokaw.wa.com>
Source record: 36871

I'm looking to buy a good Eprom burner, and since CSS is currently out of stock of "Super E-Burners", I'm thinking of a PC solution. I really just want to burn Atari 8-bit OS chips and cartridge chips, so the max size would probably be a 27512. I don't want any burner's that need a spare ISA slot, since I don't have any. Also, I'd really prefer not to use DOS. Finally, I don't want to go over $200.

Has anyone ever heard of, or had any experience with the "Pocket Programmer" by Transtronics?
http://xtronics.com/memory/EPROM.htm

It looks to be about what I want, assuming its not garbage.
thanks!

2899. IRC Chat Tonight (Tuesday, May 8th, 2001) on Current Software

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-08 22:28:26 UTC
From: DCM01@USA.NET
Message-ID: <3af871bc.2317824@news.CIS.DFN.DE>
Source record: 36872

This announces an IRC chat for Atari 8bit enthusiasts on Tuesday May 8th, 2001 (tonight), 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Current 8bit Software." The Atari 8bit community is not just nostalgia. There are current software developers, and merchants, and even manufacturers. Tonight we will explore some of the current software under development, such as jpeg viewers, and internet applications, and games, and many other programs.

General Atari8 chat is also welcome.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard. Pirch is another one.

Most people have a Windows machine, but there are many other options for running an IRC Client. Arachne has one that runs in DOS. Amiga has AmIRC.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

WE'RE BACK!!..

CCAG 2001
(Classic Computer and Gaming 2001)

If you like collecting old computers, video games, and enjoy using them
still, then come join us on:

June 30th, 2001
9AM till 6PM

National Guard Armory
IT'S ON ROUTE 57!!!

(actual address)
3520 Grove Avenue
Lorain, Ohio 44055-2048
(On Route 57, going North of I-90/Route 2)

IT'S FREE!

Both vendors and attendees!
Computer User Groups and vendors inside, flea market outside!

5,000 square feet of indoor space and an additional 5,000 square feet of
outdoor space is available along with ample parking.

Setup: 29th, June, 2001
6PM-10PM

Please Call Ahead for Reservations:

Jim W. Krych jwkrych@n2net.net
440-979-9295
Fred M. Horvat fmh@netzero.net
440-286-2566
And these other CCAG 2001 organizers:
Thomas J. McLaren sirthomas@uk2.net

Please visit this site:
http://tomheroes.com/ccag.htm

As of 05/08/2001
User Groups:
Erie PA Atari Group
TI Chips

Cleveland Classic Atari Group

Vendors:
1632 Systems-From the UK!!!
C.S. Vintage Games
L.R.O. Computers
Tomorrow's Heroes
Retropolis
Songbird Productions
Video Game Connection
Ramcharged Computers

People/Organizations:
David S. Brain
Fred Wagaman
Harry Dodgson
Alan Hewston
Thomas Mclaren
Michael White(Bally/Astrocade)
Classic Gamer Magazine
John Litva

Possible Attendees!!!
Atari7800.com

Special Guest!!!
Pitfall Harry

We are looking to do a "Classic Game Experience" this year!
One room is going to be set up for playing classic computer and video game cartoons and commercials. The other room is going to be an emulator room-MAME, etc.

We already have one person bringing a Crazy Climber cocktail arcade game, John Litva. And, another vendor has promised to bring several arcade games as well. Please email us if you wish to bring an arcade game to the show.

We have a food service this year! The wife of one of our organizers, will be providing food, soda, and such!

Attention Atari ST/Falcon/TT users!!!
If you want anything from 1632 Systems, please contact:
Nick Harlow
http://www.1632systems.co.uk/
http://catalog.zen.co.uk/actinic/1632Systems/

See ya at the CCAG!

2903. FA: Atari 400 system with tape drive, plotter, modem & software.

Correct.

> I haven't noticed any problems with shades in graphics 9.

I did, happens on my (PAL) 800XL in Gr.9. Grey shapes 7 and 8 are identically.
I would guess the problem is a poorly adjusted D/A converter.

Other strange effects happen if you place a shape 7 pixel near a shape 8 pixel,
it looks like a faint vertical line of a slightly darker shape. Most likely
a capicity/charge problem in the D/A converter (note that the output of
every single bit gets reversed!)

So long,
Thomas

I should test this. But the luminance circuits should be same for PAL &
NTSC.

Yes, I notified this many times.

But there is nothing like adjustable D/A converter ;) There are four
outputs of GTIA called LUM0-LUM3. They are amplified, run thru four
different resistors (36k, 18k, 9k1, 4k7) and the lines are then
connected together with CSYNC. The output goes to some analog circuit
(amplifier?) and out goes the luminance signal.

Sure it is, just change the resistors- 10 turn pots with the center values more or less equivalent to the respective resistors would probably do it.

Source record: 36891

I have an Atari Lynx II for sale with carrying case, battery pack and 7 games for sale. I have the boxes for Dracula and Rampart (i think) but that is all. Asking $100.00 and that includes shipping in the US. The games are:

Dracula w/inst
Rampart w/inst
Turbo Sub
Shadow of the Beast w/inst
Gauntlet
Chips Challenge w/inst
Dirty Larry - Renegade cop w/inst

System is near mint condition and I will say that the battery pack is the best accessory for a portable i have ever used. The bigger batteries give MUCH longer playing time than the AA's.

Email me direct please.

I did try this out, and it is quite good. I think that a8jdpeg has matured into a steady, solid product. I really give this a thumbs-up!

Raf has totally reworked the interface. It looks like a BeWe DOS style file manager. The program is totally intuitive now. You don't have to read any instructions. Just run it!

There are a wide range of modes to choose from, including the advanced HIP modes. For larger-than-visible-screen images a8jdpeg automatically centers the image, so you end up looking smack in the middle of a large image, right where you want to be. You have the option of looking anywhere else you want.

The program color-cycles as the pictures load. I think this makes the load/display time seem quicker, because something is going on on the screen.

I can't think of a thing that should be changed, although I understand there are plans to add features. Great job!

2920. SIO Programming

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-09 21:09:44 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3AF9B218.9DBF2C8D@asw.cz>
Source record: 36896

Hi!

I've got this problem: Program writes to D1: using SIOV. It works 99% of time. Sometimes it simply hangs in JSR SIOV. The command is not displayed on APE's command monitor. Break works, makes the SIOV to return with error. Why? NMI is disabled, but it shouldn't be any problem AFAIK.

The code:

```
LDA #$31 ;D
STA $300
LDA #$01 ;1
STA $301
LDA #$50 ;write
STA $302

;$80 bytes
WB_REPT: LDA #$80
STA $308
LDA #$00
STA $309

;buffer address
LDA $80
STA $304
LDA $81
STA $305

;starting sector
LDA $82
STA $30A
LDA $83
STA $30B

LDA #$80 ;write
STA $303

JSR SIOV
LDA $303
CMP #$01
BEQ NX_DEC_SECS
SEC
RTS

NX_DEC_SECS:
.
.
```

.

Mo,

I will post a list as soon as I get the time. I have to go thru around 100 disks that my father used for the column that he wrote, also he keep the household finances on the Atari with File it II. He would write his articles on the Atari and print them out on the Star nx1000. I would scan them into Pagemaker and do all the magic and print them out on the laser for his publisher. Also I remember that I saved around 300 disks of games, God only knows how many will still boot when I find them. I currently have a set of Percom drives on the system but have some other drives 810's that prob need 1036 chips and some of the 1050's. I know some of them have been modified. The 800's are.

It may take me some time to get a list together as my father passed away on the 28 of April. I still see him everytime I touch something of his. He was a remarkable man and I loved him, he was my best friend and I still miss him very much.

Neil

2923. Re: Tape images back to tape?

Source record: 36895

It ought to be possible to duplicate Atari cassettes in an "ordinary" audio tape deck; they are in fact "just sound." When the Atari writes tapes, it converts data-to-sound, one bit at a time: a 0 becomes a tone of one frequency, and a 1 bit becomes a tone of a different frequency. That's all there is to it. In theory, you could tap the Atari's audio-output pin during the cassette-writing process and record Atari programs on, oh, reel-to-reel or 8-track or whatever. :-)

The non-standard part about Atari cassettes is the process of playing them back INTO the Atari, where you have to convert sound-to-data. This requires a special chip that can detect the sound frequencies that the Atari sent out for 0 and 1 bits, and convert these frequencies back into the electrical high/low voltages needed for Atari SIO input. You could build an external device to perform this conversion from the above-mentioned reel-to-reel, 8-track, etc. (At one time, back when Atari 8-bit computers were still commonplace -- and set up to run demos -- on the shelves of department stores, I toyed with the idea of building just such an external device and slipping my own demo programs onto "public" Ataris by way of my Walkman... It would've been a great prank but I never got around to it.)

> AFAIK.

Hi Jindroush,

This sounds to me like your Atari is connected to the COM port of
a PC with something like Windows95/98 running there, right ?

If that's the case I'm sure the problem would vanish the moment
you use MSDOS instead.

It took quite some time until I found out about the sporadic
problems at the COM port when using any Windows version except NT
where the problems are impossible to be overlooked. But with W98
I transferred more than 100 disks to ATR before I noticed that
sometimes wrong data was written to the ATR (one wrong sector
for 10000 that were okay maybe). So since I don't want to create
every ATR twice and then check whether they are equal (I did it
for some time to check whether the problem would occur with MSDOS
too) I only use MSDOS now for ATR creation.

Hope that helps with your problem
Gerhard

This is a problem. Depending on the Os release, the NMIs will either get
re-enabled (Os A), but at least (Os B and beyond), the Os requires the
vertical blank interrupt to operate properly (i.e. deadlock check). For some
timing reasons, the command might not get thru to the floppy, in which case
the command times out, and is retried. This is exactly what the VBI is good for.

For simple writing, I would rather use DISKINTERF than SIO as it installs
most of the important parameters correctly already. Besides, the code below
seems ok for me.

So long,
Thomas

So you think that it hangs because there is a error writing and it waits
forever looking for some watchdog timer which does decrement in VBI?

I'm turning off the NMI because code in VBI (I think) checks for TRIG3
value which does change while working with my program. I should shadow
it correctly, but the question is where is the shadow register for
cartridge presence?

2927. Atari Cartridge Dumping Project

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-10 09:33:45 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3AFA6079.92736708@asw.cz>
Source record: 36900

Hi!

I've published preliminary info about this project at
http://www.asw.cz/~kubecj/acartdp.htm

The purpose is to have maximum possible information about any cartridge ever produced for 8bit Atari. As it may seem unimportant for cartridges like Pac-Man or Missile Command, there are few, which are R/ER and it would be nice to have at least some info about such cartridges. Also it's important for the development of emulators.

What I'm looking for (listed by priority):
1) dumps
2) label/case descriptions
3) label/case scans
4) box scans
5) manual scans/ocrs

What I really want is CONFIRMED information. For example - if proto exists, I need dump. If label variation exists - I need scan. Please, do not submit any info starting with 'I heard...' ;) I want it to be as correct as possible.

(offtopic: language problem: is correct - 'are CONFIRMED information' or 'is CONFIRMED information'? ;-) I mean more than one piece of info - we use plural in my language).

The detailed instructions for doing so are on my pages. The software for doing dumps is available for download in ATR file (for disk versions), also is there generator for tape software (needed when you don't have RD5 switch).

No downloads are there now, so leecherz go away. I think the CD will be ideal medium for such thing. And will be available in future for all the contributors. How near future, it depends on you.

Current stats are:
Total cart number: 398
Good dumps: 172
Todo: 226

Lists are available on my page.

Thanks to all possible contributors,

I made the needed change (at least I think ;)

> In page 3, 0x3fd or something like it. I need to check for this.

Found it in meantime, it's GINTLK, 0x3FA.

> But anyhow, why do you want to be able to insert a cartridge during loading? (-;

See my next message about Atari Cartridge Dumping Project.

It's needed because some bankswitched cartridges (OSS) could turn
themselves off while dumping their contens on the disk. And it would
hang the computer. But I think I solved that.

Hi,

I have a sampler cartidge for Atari 8 bit. You can connect an audio source (microphone or line) and sample the input into memory. You can edit/resample/save it to disk afterwards.

You like more info about that too? I have software and manuals with that.

I believe it is from '2-bit Software', have to look it up, it is in a box in the attic ;-)

Regards,

Mike.

These are all correct in English:

The information is...
Some information is...
A piece of information is...
The pieces of information are...

But these are incorrect:

The informations are...
An information is...
Some informations are...

Don't ask me why... :-)

The word 'information' is always singular in English. So the verb needs to be singular, too.

When you say 'pieces of information' the verb needs to agree with the noun, 'pieces' -- so we use 'are'. 'Information' is an adjetive that modified 'pieces'.

Source record: 36912

Hi all,

I have an 810 drive that I'm having trouble with. I've never had anything but 1050's and xf551's so I have a question first. With the 1050, you power it on, it spins for a few seconds. When you insert a disk, it spins also. The 810 spins when I power it on but, when I insert a disk, no spinning. That's not right, is it? I have checked the connections and the drive select switches on the back. It's set for drive 1. Got any ideas? Thanks!

David

Just another off-topic post, I've always felt that the beauty of the
American-English language is that it evolves and even when spoken in many
different ways it can commute the same meaning. I have heard the word
'informations' used many times and although it may not jive with websters',
it still makes sense. Just recently, I heard the word 'office' used as a
verb, as in "I'll office these over to you later.." and "I've been officing
all week...". Murderen Sie Uns nicht bitte, und veilen dank!

The 1050 spins to determine if the disk is enhanced density or single density. Remeber the 1050 is a 'dual density' drive. I've never had an 810 but I wouldn't think it would spin just inserting the disk. Try booting DOS 2.0 or 2.5 and see what happens.

There was a photo-typositor (pre-digital) typeface called Harry that is very close to the Atari logotype. The "R" in the Atari logo has slightly different proportions and the weight (boldness) would fall between two weights called Harry Heavy and Harry Fat (there was also Harry Obese--hey, it was the seventies, man!). I am almost certain that the Atari logo was hand-drawn, not something off-the-shelf, though likely modeled on Harry. It may very well be that someone did a font based on the Atari logo, but more likely the font you remember was Harry or "similar to" Harry (i.e., a knock-off). Aren't you sorry you asked...;-)

Okay. I looked it up. "Information" is what is called a "mass noun," that is, a thing that cannot be counted; an indefinite quantity thought of as a single thing. Other examples are butter, sand, water, cheese, literature, software, hardware. Nouns that have singular and plural forms are "count nouns," that is, things that can be counted. Apparently, most languages have this distinction, but which category certain nouns fall into seems to vary from one language to another.

Yes, I want everything ;) Does it contain some program or is in fact
just the 'interface' and the program is loaded from diskette?

Boys: Thanks for the language clarification. Now back on the topic. ;)

Arggh!! My pet hate. An unfortunate Americanism that is spreading to the
UK too us the tendency to reinvent nouns as verbs as above.

Also, I learned in high school that subjects *sometimes* can be affected by
the object of a follow-on preposition:

"Some of the cake is left."
"Some of the people are left."

Although "some" is the subject, when the preposition has a mass noun
like "cake"
that can *not* be counted, the verb is singular. When the preposition has
a countable noun, like "people", the verb is plural.

Well,
didn`t Hasbro use the same font ?? (They did use a different logo, but
it looks like they used the same font for the word Atari). Or had their
font just been pretty close to the original one? -Andreas

P.S.: We had the same problem, we are currently developing a Flash-Eprom
cart and use the brown/silver 800/XL cases for that. But for the labels
we could not find the original font anywhere (we wanted to have a label
with exactly the same layout, silver XL label with white lines and a big
black "Atari" written on the left bottom; whereas "Flashbox" should
appear at the top as the title of the cart. Furthermore we would like to
give the cart a number, just one digit higher than the last A8 cart. But
which was the last cart and which number has it ?)

Define roms?

Do you mean the system roms, the rom such as defender that were on
cart or games on disk?

I do hope you don't mean the games that were on disk because I HATE
people calling them roms or romz :-(

:-)

Please use the enclosed email link within this post rather than your reply button, email not properly addressed may not be able to be responded to.

Last Updated 5/11/2001
- Sold/Traded Items Removed

I have a limited amount of brand new Atari Jaguar items for sale or trade (these are not refurbished units). These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

Due to all the game titles being in short supply, all titles with the exception of CyberMorph are available only with the purchase of a Jaguar game system.

If you are interested in any of these items, please respond to me by using this automated link jim_l@NO.SPAM.telusplanet.net?subject=Classics.Atari.Jaguar (removing the NO.SPAM. first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

** Atari Jaguar Packages - Brand New (with controller, RF Box & AC adapter)**
==========
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $45
- Atari Jaguar with CyberMorph cartridge $35
- Atari Jaguar (No Cart) $25

** Atari Jaguar Accessories - New**
==========
- Team Tap (4 Player adapter) $20 - (Limited Supplies)
- Jaguar unit alone (No power supply, controller or accessories) $20
- Composite Video Cable $15
- Spare Controller $15 (Limited Supplies)
- AC Power Supply $10 (Limited Supplies)
- RF Switch Box $5 (Limited Supplies)

** Atari Jaguar Games - New/Shrink-wrapped**
==========
Due to all the game titles being in short supply, all titles with the

exception of CyberMorph are available only with the purchase of a Jaguar
game system.
- Checkered Flag $10
- CyberMorph $5 (No Box)
- Kasumi Ninja
- Tempest 2000
- Troy Aikman Football
- Wolfenstein 3D

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues
12 thru 20

2960. Directories

Newsgroup: comp.sys.atari.8bit

Hello all,

When I was using my 8-bit computer daily, I never really fiddled with the directory thing. I never needed to. Now I want to, but do not know much about it. I know how to create a directoy, but how does one put files into a directory, use the files in a directory and list the files in a directory?

Edward S. Baiz Jr.

We will assume for the nonce that you refer to sub-directories on a Sparta or MyDos disk; and these paths behave just like MSDos or Windoze except the separator is either a colon (:) or greater than sign (>). Sparta uses commands like 'DIR' and MyDos has a menu choice like 'A' followed by the path such as DIRNAME>SUBDIR>FILENAME.EXT. All of the options such as copy or delete or RUN"D2:DIRLVL1>DIRLVL2>GENIUS.BAS are available.

>but how does one put files into a directory, use the files in a directory and list the files in a directory?<

MyDos or Sparta? MyDos4.5 has the commands "Q" (Make Directory) and "R" (Pick Directory). When you use "Q", it (MyDos) sets aside 8 new sectors for a new directory within the directory that is currently picked. It essentially is treated as a file entry in that directory, except all of the links are available to allow the new subdirectory to hold 64 more file entries. 64 file entries was matched ok for a single density, 720 sector disk, but is generally very inadequate for larger disks or hard drives. It is possible to have several levels of directories, but I have never used more than 3 levels on an A8:
Main or Root Directory
Level 1 Subdirectory
Level 2 Subdirectory
MyDos shows the current default directory of D: on the 3rd line of its main menu.. When you look at the directory contents ("*", drive number, or "A" menu items) MyDos shows a
colon before an entry to show that it is a "special file" (i.e. a subdirectory). Subdirectories can be renamed or deleted just like regular file entries, but a subdirectory must be empty (no undeleted files present) in order to be deleted. Files can be copied to any directory from any other, so long as there is room. You designate subdirectories in the path using a ":" or a ">". So a valid path might look like D1:GAMES:ADVENTUR .
I am no Sparta expert, but it has commands that perform similar functions to allow maintaining and navigating its directory structure in a similar fashion.

Me too Paul. Sometimes there is just no holding back the tide though.
I prefer the term "images" for disk based stuff. In fact, the word
image is appropriate for code dumped from ROMs also. The term "ROM"
as it refers to backed up copy of the code is really just short for
"ROM image".

So to be really proper I suppose we have disk images and ROM images.
Or is it disk image file and ROM image file?

2967. Re: SIO2PC Headaches again....

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-12 04:07:17 UTC
From: llpwhite@cs.com
Message-ID: <20010512000717.03016.00003143@ng-xc1.news.cs.com>
Source record: 36941

FWIW-
I fought the SIO2PC/APE battle for about a year and learned the following (at least on my hardware):

* 14C89's definitely work better than 1489's.
* A good 14C89 cable works just as good as a MAX232 (and is easier to build).
* There are several 1489/14C89 designs floating around. Some leave out components -- and that is bad, in my experience.
* Uh Oh -- I just checked and Clarence Dyson's site is down. He had the best schematics that I am aware of. Too Bad!!!
* For the Atari in general and especially with APE or SIO2PC, timing is *everything*. If you are using a modified XL or XE (added memory, Black Box, MIO, Eprom O/S, etc.) then APE or SIO2PC may not work correctly.
* On a "fast" PC (500 MHz or better) APE or SIO2PC work just as well as a Dos shell under Windows as under Dos only. Still, using Dos only is better unless you use Win APE (which I highly recommend)
* Unregistered APE will not allow writes to the ATR's, IIRC.
* On my system, I encountered the following problems: 1489 with components missing would read and sometimes not write. Would not work with a real A8 drive in the chain, but would work with only SIO2PC/APE. Built a new cable with 14C89 and all components cured these ills. Also, could not get Ultraspeed to work using several modified XL's/XE's. I now use a *Stock* 130XE, and everything works *flawlessly*.

Source record: 36942

Ron,

Heh, heh... I can't believe I never noticed that. Since the Mac version works as it should in this regard, I always assumed the PC version did too. I'm just surprised it's taken this long for anyone to report this bug (and that's really what it is).

I know exactly what the problem is, and more importantly how to fix it.

In case you're wondering, here is what happened: When you create a *normal* font in Fontographer and create versions for a non-native platform, it remaps characters to reflect their proper positions in the other platform. For normal fonts, this is the right thing to do. Unfortunately, the Atari character set is not a normal font and I neglected to take this into account when I generated the PC version. The lower ASCII is identical between Macs and PCs so perhaps that's why no one noticed it.

I will post it on my site and announce it here as soon as I make the fixed version. My apologies to all you Windows users for the inconvenience.

BTW, if you have "a font file with the same name" it is the one I did. Unless somebody has removed it, you should see my name along with the other font info if you open the .ttf file.

Hi Ron,
It has been so long that I dont even have the subscribe info, could
you email it to me or just post it here for everyone? thanks.

Ken

Some constructs are just *not* generally used. As a native American
English speaker, I would say "The information is..." or
"A piece of information is...", but *never* "An information is..."

Message-ID: <3afd29d4.1573138@news.CIS.DFN.DE>
Source record: 36797

Typically about 6 people are chatting, although there was 9 one time.
Most from US, although I think someone from Israel popped in once. The
chat lasts about 2 hours so you could stop in at 6 or 6:30 your time.

It is difficult to get a time that works for everyone, but maybe we
will have a weekend chat if enough people want to.

I ran into this on several occassions too - it turned out to be the power supply in my 130xe, it wasnt putting out enough power to drive the SIO port. After replacing the power supply, APE/SIO2PC functioned perfectly every time.

Mo <mygranny@swbell.net> wrote:

That's better :-)

http://homepages.paradise.net.nz/atari/

I think between the list of links you should find most things BUT if
there's a game you don't find then just mention it in the group.

(That does not mean 1. don't bother looking or 2. long lists :-))

2977. Re: Atari 800xl Roms pleeeeeeeeeze

Hi there Jon, long time no speak :-)

Back to the point, as many know I am a keen retro person and it's just soooo sore to see people ask for stuff in 'warez speak'. The times I see "Has ne1 got Fort apocalypse romz 4 me" in the C64 group, I could just scream :-)

As you say, disks are 'images', they always have been...

>So to be really proper I suppose we have disk images and ROM images.
>Or is it disk image file and ROM image file?

I don't mind as long as it's either a disk or a rom they are referring to :-)

Source record: 36805

You manage the files the same as always except the name includes a path and so is longer. If you pick ('R') a directory, it enables a shortcut so that the default D: no longer refers to D1:, but instead treats D: as if you had typed something like D4:GAMES>BINARY. Either way you just specify that extended path designation in directory masks and copy destinations like D2:DATA>TEXT>MAY99>PROPOSAL.LTR.

Basic has no problem with longer file names while other applications like many text editors may balk unless you have previously picked a directory path to = D:.

2986. Atari TrueType Font Fixed

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-13 00:34:18 UTC
From: Mark Simonson <marksim@bitstream.net>
Message-ID: <B72340BA.451A%marksim@bitstream.net>
Source record: 36810

Version 1.1 of the Atari Classic TrueType Fonts is now available.

This new version fixes a major error in version 1.0 of the PC version which resulted in scrambled character locations in the upper ASCII range. Also included in both the Mac and PC versions are detailed instructions, tips, and technical notes. Follow this link for more information:

http://www2.bitstream.net/~marksim/atarimac/fonts.html

Note to Windows users: Even though this new version corrects the erratic character mapping from the previous versions, the way Windows handles character codes prevents some characters from displaying properly. Some character codes are apparently unavailable. The affected characters are all graphic or control characters, mostly in the low ASCII range. See the Read Me file for details. (If anyone knows a way around this problem, please contact me.)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

OTHER USENET NEWSGROUPS:

2989. E-list for 8-bit sales and wants

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-13 08:05:14 UTC
From: Brian Watson <brian@spheroid.demon.co.uk>
Message-ID: <989741340.9575.2.nnrp-14.9e98ea3a@news.demon.co.uk>
Source record: 36813
Cross-posted to: alt.c64,comp.sys.amstrad.8bit,comp.sys.atari.8bit,comp.sys.cbm

Having just found a lot of old computer kit to dispose of myself, and to attract some of the off-topic clutter out of the newsgroups, I've set up an e-list for adverts for general 8-bit sales and wants at http://groups.yahoo.com/group/8bitkit.

I'm expecting it to be used for advertising cross-format stuff like old types of discs/disks and other peripherals but, as long as it's 8-bit related, anything goes.

There's no "middle-man" involved, so all transactions will need to be agreed between the vendor and the buyer in each case.

If you want to get on to the distribution list, send an e-mail to the following address 8bitkit-subscribe@yahoogroups.com or, to post a message to the list, send it to 8bitkit@yahoogroups.com .

I'm suggesting a maximum posting frequency of "once every two weeks" on the basis that more often than that is likely to annoy the very people with whom you are trying to communicate!

If you later want to come off the list, just send a blank e-mail to; 8bitkit-unsubscribe@yahoogroups.com

Good idea. It would be helpful to have a standard for subject lines - eg.
the usual FS, FT, WTB type stuff, some notion of location and willingness
to ship (eg. [UK], [US-ONLY] etc) and maybe even a flag indicating private
or commercial sales.

> I'm suggesting a maximum posting frequency of "once every two weeks" on the
> basis that more often than that is likely to annoy the very people with whom
> you are trying to communicate!

I'd suggest this be rigidly enforced, on pain of removal and even banning
from the list. Spam really *will* annoy potential members (witness the
comp.sys.cbm.forsale thread on here a few months back).

Well done Brian!

Richard

I'm moderating it, so will try to apply a common-sense good practice regime
if things appear to be getting out of hand.

Hi,

I have an Atari 400 system up for auction, it include the Atari 400 computer with power supply & RF switch, a 410 tape player, a 1020 plotter with new sealed pens & data cable, an MPP 1000C modem (with terminal ROM cartridge), and original software (tape & ROM based).

Currently @ $23.27 with 19 HOURS LEFT, for more information & pictures please go to the following URL,

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1236344899

If you have any questions please send email to the address below, don't forget to take the anti-spam part out before replying. Thanks.

John.

Howdy folks

My photocopy of SAMs manual for the 130XE has a small drawing of U35 on it. The schematics call it 14LS958. From the looks of it (but I'm not an electronics guy), this might be a 4 bit shift register, like the 74(LS)95.

Could I be onto something here, or.....

2999. patched OS ROM IMAGE

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-14 11:12:01 UTC
From: Janka Gerhard <gerhard.janka@siemens.at>
Message-ID: <3AFFBD81.C26405E8@siemens.at>
Source record: 36823

Hi to all emulator users,

I patched an ATARIXL OS ROM image with the fast floating point
package. A BASIC test program which needed 34 seconds to execute
in the emulator only needed 22 seconds with the patched FPP.
Unfortunately I think there are still legal problems at
distribution of such an image, aren't there ?
But at least anybody who is interested in such a speeding up
can do what I've done in less than an hour.

Gerhard

TurboBasic comes already with patched-up floating point routines, BTW.

So long,
Thomas

TurboBasic is an excellent product that probably is still quite faster
too, aside from its other great features like the much more modern
instruction set.
But nevertheless for people using Atari BASIC a patched rom seems a
good way to gain at least some execution speed.

what ever happened to the Tramiels? (sp?)

i know all about the history of what happened when they bought the company from when i used to read my atari mags when i was a kid during the 80's and also reading all the unplugged history accounts on the various atari history sites, but WHERE ARE THEY NOW?

its been 5 years since they bled the remments of atari into the ground selling it to JTS so what happened to them since then?

i wonder if any of the family ever reads newsgroups like this or actually visits sites like atarihq.com or has any idea about the recent explosion of interest in atari again.

i wonder if they read these newsgroups or whatever and wonder about things like: "hey maybe if he had come out with a powerpc powered falcon II, i wonder what would have happened? .... hey maybe if we came out with the replacement for the jag? ... hey maybe if we came out with the lynx 3? hey i wonder if we REALLY marketed this stuff WELL and not half assed, what would have happened?"

i dunno i just get rather mad thinking about the BAD decisions that they have made about atari and wonder if they actually take "ownership" of the problems that they caused.

i remember that when they bought atari, compute mag implied that (i maybe wrong about this, it has been 16 or 17 years since then!) the tramiels were atari's best and last hope and would be able to turn atari around and make it into the next commodore.

now that i look back, it seems like they just bled the company dry and had some potential wonderful ideas and prototypes, but either didn't do anything with them or marketed them with such lackluster hope that nobody took them seriously. i don't EVER remember any lynx tv commericals and the only jag commericals i remember were very boring and did NOT imprint into my mind.

oh well... i am off my rant.

> Atari basic cartridge, or adding the new rom somewhere on the Atari xl/xe
> motherboard..

TurboBasic is a bit too long for an 8K rom image, I suppose. You could
burn it into a 16K ROM, maybe, but this would require relocation of the
program to the proper program spaces. The XL version requires RAM space a bit
on top of the DOS (0x2600 and up, IIRC), and behind the ROM. It does not
replace the Atari basic in the cartridge area.

Greetings,
Thomas

There was a 'cartridge' DOS called MD-DOS which has rom disk. You asked
the developer to include the needed utilities in the EEPROM image and
then you simply loaded that. So yes, it is possible ;)

Tbasic.com has 18kb here. It should be possible to compress it to 16KB,
add a little relocator loader and make small hw mod on standard 16kb
cartridge to turn it off.

It should be easy (at least I think) to put it inside the OSS cartridge.

Except for the modifications in the code to switch banks at the appropriate
time. Its also likely that alot of bank switching would be required if the
code was not broken up into logical 4k chunks.

I seriously doubt it. I've been around a long time and even some names you
would consider forward looking had real resistance to using the net. Think
about it, I remember telling Bruce at B&C that something was happening here
back in the late 80s and his response was ~"What for? I have the BBS.". I
mean he could have been Lycos. Ditto for others like Bob Puff, he was very
late getting here.

Would have been nice if they open sourced their OS, ditto for Amiga. Only
real problem is they seemed to be as crash prone as Windows. They could have
been another Linux or Redhat but with crashes.<sic>
>

There were forces beyond bad management that came into play. At work, no other computer other then IBM would be considered. We had a Stanford PHd in Chemical Engineering for the area director of Alza R&D. He had a Mac at home and wanted to use one at work. Our revenue/budget was probably close to $40 million a year and our CS had control over every purchase for calculator or computers over $500, they shit canned his request. Stuck him with an IBM AT and some primative version of windows that he felt so strongly about he called me into his office to demonstrate how crippled it was.

Since everyone had to use PCs at work, everyone wanted the same at home for compatibility reasons. Wasn't enough that STs or Amigas had spread sheets too, they had to have Lotus 123.

So really, lack of penatration in the business market meant restricted penatration in the home market. Soon as IBM came out with the PC, every other manufacturer was doomed to be a bit<sic> player.

That was part of the problem. Also part of it was that Atari and CBM just
seemed to have too many pots boiling at once; and not enough marketing
muscle to push them all. Apparently the Amiga was always profitable, but CBM
kept pouring cash into all sorts of wierd projects most of which never saw
the light of day. Atari had a computer or 2 and 2 maybe 3 consels on the go
at any one time. Sega and then Sony were able to market their products with
enormous punch, and the floating buyer who wants 'cool' and buys because
'his mates wamted/had one' decided that no matter how technicaly superior
the Jaguar or CD32 were, he HAD to have a sega/sony.

Without the marketing muscle of someone like Warner Bros, Atari had little
chance to compete on an even footing.

well basically my question was referring directly to the tramiels, not so much as to what happened to atari. what happened to atari is heavily documented, i just wanted to know where the tramiels are and if anyone knows if they even care anymore or ever really cared about atari. i am more intersted in the "mind"s of the tramiels rather than the cut and dry business aspects of atari.

>chance to compete on an even footing.

Actually, that's not the case with Atari Corp. They had the money to do
marketing. In an interview I did with one of the Tramiels not long ago,
it was stated that it was a standard for them to only invest 10% back in
to advertising. A paltry ammount, especially when they obviously had the
money to invest a lot more.

From what I've been able to gather, a lot of the problems occured from
the Tramiel "undercutting" strategy (power without the price and all
that, basicly their commodore strategy of taking the cheapest parts to get
the job done to maximize the profits, selling through retail stores, etc.),
constantly making certain market demands and negotiations with suppliers and
then suing when they didn't occur.

Such as with what happened to the Lynx, when they couldn't drive the price
down any further to compete against the gameboy and gamegear because the
LCD manufacturer wouldn't give them a break. So after they killed the Lynx,
they sued them.

Why would Jack care about Atari? He FOUNDED Commodore. And, Atari was just his revenge tool against the guys who pushed him out of his company. As already stated, IBM computers doomed every other flavour of machine. It is remarkable that they kept the company going for as long as they did. Their only true big mistake was to not jump back into the Video game market in a big way in 1987 instead of developing more powerful versions of the ST. All the computers such as the TT, Falcon etc were utter failures, not because of lack of marketing, but because they werent IBM's.

Their "mind" was to make money. They had no particular nostalgia or love of the Atari company. Of course, I am sure that they did not enjoy their company decline into a brand name, however, they probably don't give a rats ass if some Atari fans hate them because their favourite computer and video game company is but a memory.

I am probably in the minority, but I really don't understand these rants against the Tramiels. They don't give a shit, and I certainly don't give a shit whether they cared a whit about Atari when they owned it. I am sure they tried hard to make a bundle of cash from Atari. I don't have two cents to rub together, and they probably live very comfortable lives. Why should I care if they "loved" Atari when they were trying to make a buck off us Atari fans.

Just my 2 cents.....

Willy

3015. Trade Ultima III boxed complete for Moebius boxed complete (ST)

Newsgroup: comp.sys.atari.8bit

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

Would anyone out there like to trade Ultima III (Atari ST) for Moebius (Atari ST)? I used to have Moebius a long time ago and lost it, and I have Ultima 3 on my Atari 800xl already so I can part with it on my ST. E-mail me if you want to trade. They are both worth about the same and both pretty hard to find. Thanks. -Satcom2

3016. Tramiels

Has anything substantial been written about the "Tramiel Era" at Atari? Jack, especially, could write a heck of an (auto)biography. As much as they have been maligned for the way Atari was run, it would be terrific to hear their side of the story. Their story is one of the keystones of the 80's computer era.

Here's an update, finally. SpartaX will not recognize the drive. I put a disk in and did a 'dir' and I got "no drive present". I cannot read, write or format. Additionally, I cannot access D2: when the 810 is the first drive on the SIO chain. I found another 810 drive at a thrift store for $1.50. It has the almost the same problem except it doesn't make the familiar grinding noise when first turned on. When I power up the computer, it also doesn't make that 'farting' sound. I cannot access D2: when it is the first drive on the chain either. Thanks for the input!

David

When you turn on the XE, does the TV picture go blank? If you still have
static, then its probably a dead power supply(fuse).

Hi,

Yes, HACE meets in Houston, usually the 4th Thursday. I drive over once or twice a year. They lean towards using the PC and emulating an ST a lot.

From what I can find,. Axlon banking starts with 0(as the main bank) and goes up to the max installed. From basic, this is easy to test.

>
> phantomm@bellsouth.net

The limit is the A8 O.S. It limits sector numbers to 16 bits in the IOCBs(the next vaule up from 256 sectors). And probably has the capacity in the O.S. code to only work with 16 bits of sector numbers. This can be worked around, I do mean "work". The first way to get past 16megs is to up the density to 512 bytes. Some are working on Mydos to do this I think. After this is changing to a blocking factor, but both mean more memory used. So a practical limit will be 32megs. Special software can work around this I suppose. If we are ever to read data CDs, it will have to be done.

No, I meant using OSS cartridge as ROM disk. The small loader would just
copy the data off the cartridge, turn the cart off, relocate code, clean
memory and run it. That should be easy. Rewriting Turbo Basic to be
Basic XL/XE like would be really hard if not impossible.

well actually i fixed the problem since i wrote this. the drive was
spinning up, the problem was that the track leds were not turning on even
though the rest of the drive seemed to be working.

i tore the drive completely apart and took the bottom main board off. under
the main board, there was a tiny spring that was shorting out a few solder
pads. i removed the spring and put it back into the mechanicals of the
drive itself and it has been working flawlessly ever since.

thanks anyway.

It has nothing to do with the OS itselves.

The limiting thing is, that the old SIO-commands are used by both (DOS
and firmware of the controllers) fot the access of the harddrive. That
might be useful in emulating the old serial peripherials.

If you are using only the data-structure of the DCB ($300), but define
other commands, you could easily break that limit.
For an example look at my postings describing an "Atari Advanced SCSI
Interface", the DAUX bytes are only used as a pointer to the new command
block.

The CIO (with its IOCB) do not need to know anything about the physical
representation of the files on the medium.

Bye,
Matt

Thanks for this info, I'd like to see sometype of fix for the 16meg partition
limit if possible.

It would be nice to be able to read CDs using the MIO as well.

Title says it all:

FS: Needham's PB-10 Eprom programmer

Barely used, like new in perfect working order. Comes with complete manual
and all software.

$105 gets it shipped to you anywhere in the US. (PayPal accepted)

For more info. and a device list, go to:

http://www.needhams.com/

Click on "Programmers", then scroll down to the "PB-10" at the bottom of the
screen, etc.

Thanks for looking,
Chris

Don't hold much hope for this happening. Several reasons for this, not the least of which is 16 megs is a huge amount of space for an 8 bit computer. Most setups allow for hot swapping/partitioning of a hard drive into several 16 meg drives.

We are a cheap lot.<me too> I remember back when I was experimenting with SIO2PC designs I offered one to someone for $15 to cover cost of shipping and parts. He said that was too much and was going to hold off purchasing until he could find a used one at a lower price.

So we will always take the path of least resistance. Right now that means our CD interface is a PC with a CD ROM and a SIO2PC cable.

That is definitely NOT a case of belt problems which would generate a "Boot Error" message instead of the "I do not detect any D1: drives" response... it almost has to be something in the electronics.

>There was a biography of him about ten years ago. Called something like video game wars but I could never find it.<

It was The Home Computer Wars, published by Compute! Unfortunately, it is just about the (mainly) Vic 20 period, and a little of the C64 era at CBM. It was written from the point of view of Michael Tomczyk, a non-computer guy, who joined CBM and became an "insider". I find all books like this fascinating, but AFAIK, there is nothing substantial about the Atari Computer era.

3041. Tuesday Night IRC Chat Tonight (15 MAY 01) on "Where Are They Now?" in #Atari8

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-15 23:07:44 UTC
From: DCM01@USA.NET
Message-ID: <3b01b4fd.42819535@news.CIS.DFN.DE>
Source record: 36765

This announces an IRC chat tonight for Atari 8bit enthusiasts. For tonight Tuesday May 15th, 2001, 10:00 pm Eastern US time.

Here are the corresponding times for some other places, choose the one near you.

California: 7:00 pm. Colorado 8:00 pm. Texas 9:00 pm.
London, England: 4:00 AM. Berlin: 5:00 AM. Hong Kong: 11:00 AM.

The topic for the chat will be "Where Are They Now?" We will reminisce over the pioneers and rogues of the Atari 8bit, and share about what happened to them since. Not just people such as the Tramiels, Nolan Bushnell, Price/Gilbertson, Bob Puff, Sid Meier and others but also the companies that were prominent such as Artworx, Epyx, Datasoft and the always controversial Avalon Hill.

General Atari8 chat is also welcome. We are also going to float the idea of a weekend chat to accomodate the Euro users.

This will be a standard IRC chat. It is not a web-based chat on your browser. You need an IRC client, such as mIRC. mIRC is really easy to set up, and you can find it at www.mirc.com. Not to advertise it, there are other great IRC clients for many platforms, but mIRC is sort of the standard.

The chat will be on Amiganet. Here are some servers that will get you there:

irc.whiterose.net
thule.no.amiganet.org
fullcomp.au.amiganet.org
linux.us.amiganet.org
au, uk, se, no & us.amiganet.org

Once you log onto a server type "/join #atari8" and we will be there waiting for you I hope!

However, "cake" is not a mass noun (i.e. there are many cakes in a bakery).
But we get the point, and are enjoying the english grammar refresher course.
Such dedication toward perfection is indicative of Atari users, so keep it
up!

3044. Self Destruct Vector on the 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-16 02:27:45 UTC
From: Chad Hendrickson <chadh@REMOVETHISmediaone.net>
Message-ID: <BAIM6.51874$3c6.13677835@news1.elmhst1.il.home.com>
Source record: 36767

Years ago either Antic or Analog magazine had an April Fools joke that there was a Self Destruct Vector inside the computer and that if you accessed it, the computer would melt down. They even had a program that simulated the computer frying itself.

Am I remembering this correctly?

Was it Antic or Analog? Does anyone have more details about this?

I remember falling for it and was scared that someone would hack that into a normal program and destroy my computer. I was quite relieved to find out it was just a joke.

IIRC, the 6502 did/does have a nominally undocumented instruction
called "Halt and Catch Fire". As I recall it was some kind of test
instruction that caused the processor to stop fetching and drive all
its lines. Those also being driven to the opposite polarity by the
address/data bus would then start dissipating current, thus leading to
the "catch fire" part if the amounts were substantial enough. Actual
destruction would depend on quite a number of factors, but I suppose
enough 6502 designs were suceptible to give the instruction its name.

It was a great little program, really very impressive to watch.
I found it highly amusing and did not understand all the protest
mails they got for it.

Unfortunately since I don't know the name, the chances that I can
find it on one of the old disks are quite small.

Hi there!

The Epyx Shrine (http://home.nexgo.de/cybergoth) now features an
additional page about Pitstop 2 including an interview with Stephen H.
Landrum.

If you are interested in my upcoming Atari 2600 VCS port of 'Gunfight',
I now offer a fully playable demo for download!

I'm still searching some friendly guy with both a scanner and and Epyx
catalogues from Fall 1985 or from 1986. Can someone provide
complete+readable scans of such treasured items?

Greetings,
Manuel

My resistance to connect a PC to my beloved Atari was higher than the
resistance to buy a SCSI CD ROM player. Bought mine for fl.50.00 which is
about 20 USdollars. 32 speed, slot in.

Now all I need is the software.
I'm trying to figure out what Matthias did. My assembler is barely good enough
to dig through his source files.

Supposedly, the track display has been done for a 1050. Unfortunately, I have
no info about it. The next big floppy event will probably be the ST2XE
adapter to use ST 3-1/2" drives with the A8. I am especially eager to see that
since I have 2 mint 3-1/2" Indus GT 100's -- track display and all. Tried to
hook them up to my BB/FB, but could not get them working. However, I only made
a modest effort. I still think it can be done.

Another thought on the display...
Couldn't the O/S could be patched to display the disk IO information on a 25th line on the screen? That could give you the info that is displayed by an Indus or Rana. Also, APE displays some info on the PC screen. I'm not sure, but I think that info can be recalled.

What would be needed for a display? A microcontroller and a small cheap display and a few support chips?

I cannot vouch for any of that... but if factual, the Analog program did not utilize it and was a harmless prank. Their source code was also listed with totally bogus comments which made it tedious to try following the logic, or it may also be bogus.

I never bothered to type in the code or to disassemble it; I figured it just stole the Reset vector to force a warm start into jump back to a sleep loop after some cute audio and video effects.

Yeah, I remember that! It's called Paperweight. I'll have to see if I
can find it somewhere. It gives you a countdown, then some pretty
realistic looking graphics and sound effects to make you think your
system was having some major problems, culminating in white noise,
very similar to what you get on channel 3 with the power off.

The first time I ran it, I was scared to death (it was my dad's
computer). I quickly did the self-tests to make sure it hadn't really
done anything. 8+)

Sorry, but I don't think so. If this were true, there would be a lot of dead
6502's out there. The 6502, when it "crashes", would no doubt eventually fetch
the offending undocumented opcode and then die. The 6502, being a very simple
processor, just continues to fetch instructions, even if they are not valid.

From: Mark Simonson <marksim@bitstream.net>
Message-ID: <B7286B27.4697%marksim@bitstream.net>
Source record: 36793

As I mentioned a couple of days ago in a separate thread, the fonts are
fixed now and available on my site at this address:

http://www2.bitstream.net/~marksim/atarimac/fonts.html

The erratic character mapping in the PC version is fixed. However, because
of the way Windows handles fonts, not all of the ATASCII range can be
emulated. Fortunately, all of the alphanumeric characters (both normal and
inverse) are accessible. The characters that are affected are some graphics
and control characters. Theoretically, it may be possible to make eight of
these accessible using some very subtle tricks, but so far I've had no
success. When and if I do, I will let everyone know.

(For the uninitiated, these are TrueType fonts for Macs or PCs which emulate
the ATASCII characters set from the 8-bit Ataris making it possible to view
and print Atari text files on modern computers.)

You can't run the cart AS YET...

A certain emu will hopefully run it in 2 releases time...Keep
watching.

The disk version does work on most emu's..

"Paperweight", by Curt Cox, Analog Computing, April 1986.

The funniest thing is looking at the assembly source - the guy changed the names of all the standard memory locations so the code would be unreadable, and would look as if it really was looking for, and invoking, a self destruct vector..

I recommend running it (yes, it will also thoroughly destroy a PC running it on an emulator), it's pretty damn good.

(Will send a copy to anyone who mails me)

Damn funniest program I ever typed in from Analog. I remember waiting until the May issue came out to make sure they were just kidding. In fact, there was a big disclaimer in the May issue that it was only a joke. Still, it was a mighty fine example of what could be done with DLI's on an A8. If I hadn't had a Commodore 1701 monitor, I might have actually fallen for the joke, it was that good.

Paperweight remains on my primary demo disk after all these years, right along Ballsong and RobotDemo. Well worth the laugh!

3073. Re: Self Destruct Vector on the 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-17 01:38:40 UTC
From: Greg Menke <gregm-news@mindspring.com>
Message-ID: <m3eltoah5r.fsf@europa.mindspring.com>
Source record: 36698

I tracked the reference down, and it did exist on the 6800 series,

http://yasd.dhs.org/jargon/html/entry/HCF.html

and also on the 6502 (though its possible the 6502 is included
incorrectly).

http://www.classiccmp.org/mail-archive/classiccmp/1998-10/0798.html
http://www.monkey.org/geeks/archive/9711/msg00053.html

Even given the existence of the "bad" opcode there are several reasons
why it might not frequently cause trouble;

1. The electrical design could be such that insufficient current is
dissipated, so damage doesn't occur. (Given that on lockup, the
user would frequently be resetting withing a few moments, this is
not too unreasonable).

2. There are > 1 bad opcodes, any of which could cause the processor
to lock up (and not enter a failure mode), so the liklihood of
hitting a fatal code is decreased. Are you sure the 6502 always
fetches? Further, since HCF causes the bus to start toggling, it
could be misconstrued for continuing operation.

btw; I was wrong, it just starts toggling the address lines, not
driving them staticly.... bad memory.. must be a crc error.

Gregm

3076. Ballblazer: Is it a bug?

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-17 02:11:55 UTC
From: Itay Chamiel <itaycspam@cs.huji.ac.il>
Message-ID: <3b0324cd@news.bezeqint.net>
Source record: 36697

There seems to be a bug (or maybe a copy protection scheme?) in Ballblazer. At a certain point in gameplay, the screen corrupts - and stays that way indefinitely, rendering the game unplayable.

An easy way to recreate this problem is to pit two Droid 9 players against each other. The game won't survive more than a couple of minutes.

This occurs with every setup I have tried - various Atari machines, various emulators and versions of the game downloaded from many different places.

This bug does NOT occur with "Ballblaster", a beta version of the game which seems to be circulating.

Does this occur with an original legitimate version of the game as well? Is the version circulating on the net corrupt? Anyone have any ideas?

-itay

These are the Atari ST programs that I have for sale

Rorkes Drift
Gettysburg
Armada
Star Trek :Basic version
Police Quest (Three Program disks and three copy disks)
Regent Word II (word Processor)
Lesiure Suit Larry II (three Disks), plus Copies [At least eight total so far]

Stellar crusade [game and scenario disks]
Carrier Command
Warship and save disks
Colonial Conquest
Advanced Dungeons and Dragons: Heroes of the Lance {disks A.B & C]
Empire: Wargame Of the Century
Simcity
Civilization (three disks)
King Quest II
BloodWych
Jewels of Darkness
The Sentry
Silicon dreams
Financial Cookbook
Assempro
Lords of Conquest
Stumble Blocks
Cinko
Monopoly
CardMaster
Sorceror Lord
Test Drive {two disks}
Universal Military Simulator
ST Assembly Language Workshop
Lords of Conquest map disk
Atari ST USA language disk [Shrinkwrapped and unopened]
Global commander
St hard disk utility backup
Dungeon Master editor
Dungeon Master utilities
Drakkhen [two disks]
Dungeon Master main disk
Dungeon master hint disk
Carrier command game disk and save disk
Mega ST system disk

Spectrum Holobyte Tetris [two disks]
Legend of Faerhail [four disks]
Copy of Original hard disk back utilities
Mega STe Advanced Hard disk utilities
Defender of the Crown [two disks]
Mindshadow [two disks]
Risk
Flight Simulator II
Tv Sports football
Wizards of the crown game disk and copy
Wizards of the crown save disk and copy
Bloodwych save disk
Silent Service Submarine simulation
Atari St User Cover Disk 45 Agust 1990 :Side 1,Runtime,Degas Display,and a playable demo {unknown]
Side 2 Breakout,Flexmono, magbase, xbios

St Action Games disk 11: Nine lives, Turrican, Saint Dragon, Spellbound
Dragon's breath [two disks]
KIng's Quest [two disks]
Middle earth {three disks]
Phantasie [data disk, game disk and two copies of data disk]
Phantasie III: The wrath of Nikademus [game disk and data disk plus one copy of each = 4]
Rings if Zilfin {three disks}
The Chessmaster 2000 (game disk, data disk and copy of Game disk}
Shadowgate {two disks}

MicroLeauge Baseball {Five Disks} Game & Box Score disk,General Manager/Owner's Disk,Stat Compiler
Disk
MBL 1987 Teams and copy of 1987 MNB disks

Hillsfar {two disks and save}
Faegerhail save disk
GFL CHampionship Football
Crunch Time Football AI Doctor
TV Football Leauge Disk
Gold Rush {five disks}
Star Trek: The Rebel Universe ans save disk
Psycnosis {four disks}
Armada data and program disk
Exodus: Ultima III {five disks}
Timeworks {seven master disks and seven copies] = 14
Zork Trilogy plus game disks and save disk = 3
Wordperfect For the Atari ST {five disks}
Laser C {three disks}
Knight Orc {three disks}

>into the OS for that 25th line display? And would an interrupt doing our
>display stuff de-rail the I/O timing?

I'ld rather have the drive tell me what it is doing then the computer having me tell what it THINKS the drive is doing. Nice side effect is that it would work with all software and all Atari's.

>>What would be needed for a display? A microcontroller and a small cheap
>>display and a few support chips?

A display (the old version of the Speedy could do track telling. I saw some 1050 years ago, that had the busy light replaced by a toggle switch and the power switch replaced by the display. Looked cool.), something that counts up and down and a display driver. Plus a way to hook it to 1050 and XF (the XF uses the same cable as the Floppyboard. Nice would be if a display (2 characters) could have 4 'decimal points' to show which drive is accessed. A yes, one display for all 4 FB drives would be enough I guess).

If somebody wants to try this, why not do the same for the SCSI bus. (not sure if this is usefull)

Howdy Ken

> I dont have my schematics handy but maybe it is a 74ls95B - I have
>seen many people make that mistake. Happy chip hunting.

Now that I see the number like you spell it, I see the simularity. I have two copies of the same 130XE schematics. When I looked at the old one, I at first fought it said 74, later I thought it might be 14. Then I got the newer copy, which was a lot clearer, and it really looks like it says 14ls958. But I'll have a closer look.

Heck, I should know how to decifer handwriting. I was once asked, by a doctors assistent (and wife I guess, since they had the same accent), if I studied medicine. She had just seen my handwriting and knew I am a student.

CU Mathy van Nisselroy

PS anybody have a clue what the PAL16/8 is supposed to do with the MHALT signal comming from what seems to be this 74LS95B (U35 in the 130XE's schematics.)

>Using a Translator RAM OS, all of the $Cxxx memory is available; could we patch
into the OS for that 25th line display? And would an interrupt doing our display stuff de-rail the I/O timing?<

Yes, a ram-based, patched OS would be how I would apporach it. I think the worst side-effect would be screen flicker. Ultra Speed might not be possible while using this. If you have a copy of DISKEY (still one of my favorite utilities), look at the custom display while doing disk I/O. The author mentions the screen flicker somewhere in the manual -- or perhaps it was in a later interview. The best programming example that I am aware of is the intro to Ball Blazer. IIRC, they even move things around on the screen while doing disk I/O. Time would certainly be limited, but if you look at what info an Indus or Rana updates, and I guess Trak, also , it pretty much amounts to the updating the track number. (Power, Busy, Protect, Unit ID, Track, Error, Density as I look at a Rana.)

Another approach might be a Tracer. You would have to read and store a few locations from the DCB. Essentially log the data as does the Happy or Archiver, and then dump it afterwards. Still requires patching the OS. Would silicon and solder be better? Probably -- software is normally not a perfect substitute for hardware, but sometimes it is quite viable.

Maybe after I get the new siding on the mini-barn, get the house painted, get the kitchen tile replaced, ... :-(

Yes, I have ordered stuff from him a couple of times. Most of the time I
am against constant spamming of newsgroups, but this guy is legit, has
really good prices on software, and a large inventory. He also
has a very quick turnaround on orders.

There aren't a lot of good places to get Atari stuff anymore, so I wish
people would just get off his back. Please not that comment is not directed
at the person asking this question, just a general statement to the public.

Some sort of database with games that require certain settings would
be a really nice thing. For example I can't get Fortress (the SSI
game) to run on any emulator, neither Aarons file nor my own.
I always get 'error x in line y' after the main menu. When I asked
Aaron about the settings with which he got it to run he said he
couldn't remember them but was sure he had got it to work.
Another project I can't get myself to start with is to find out clean
ATRs from the bad or incomplete ones, e.g. I seem to be the only one
who has Snokie with the end scene. But there are so many ATRs that
I can't hope to get through in my lifetime with an average time
of 1/2 an hour I could manage to spare :(The database with the
settings would be an easier task since it only takes some minutes
to see whether the settings are okay but a lot more time to play a
game to the end.

Well, I am just about to make your day :-)

To make Fortress work is VERY easy, you must think about how the old
games worked :-)

(Using Atari800win plus 2.7, works on all versions)

Boot the machine up as an 800B with Basic and load up Fortress, BOMB
when it hits option 1. Now goto the DISK DRIVE menu under FILE and
select make new image, use the default setting and let it be added to
drive 2 (standard setting). Save the made image to where you like and
now boot the emu again.

Bingo, it now works simply because most old games saved data to a
character disk and this one obviously required 2 drives (not many
games did but this looks like one)

What Snokie end scene?

I guess to answer myself, there are so many images about (mostly
cracked) and there's no real pool of these images.

Btw, i'b be keen to get a nice atr of that Snokie you mention :-)

You do?

Action loads and displays but fails to work even on WIP new versions.

You can type all you like but nothing does anything, it's like being
on notepad.

Well, Action starts out in its editor, which I guess could be descibed as a lot
like a notepad. If the <control><shift> commands fail to work, then you
probably have a bad rom file. Have you tried the rom on the DOS version of
Atari800? This version also supports OSS supercarts.

Bob, I take it back :-)

Works fine..(didn't know about the ctrl shift commands)

Cheers

SOP is to write a handler that intercepts the DOS call and looks for what needs translation. Something like if the drive accessed is D3:, then use the ISO9660 or whatever the standard is. In addition to the ISO standard you would probably need 24/32 bit math routines for handling sectors, but that isn't really a problem for the Atari.

I guess for that matter, if all you wanted to do was access the information you could even do it from a USR() call.

I think I ran a cracked version of the cart under Xformer. The cracked
version is terrible compared to the cart, you won't be happy with it.

Last time I checked, they were either in the palmtop or handheld<?> groups.
Lot's of other systems from other manufacturers in the same groups so you
are lucky to see 1 in 100 messages about the Atari. You may be able to find
someone who has experience with them there.

Have you read the dox? They are pretty complete for getting it going.
I doubt it could be said much better than the dox. Just like a real
machine, you need some software to run on it. Not just the machine
with ots self test.

The strange thing is that it works on the real XL without a second
disk. Maybe the reason is that D1 in the emulator is write protected.

> I guess to answer myself, there are so many images about (mostly

How exactly do you go about dumping a cartridge, anyway? I have an
eprom programmer that will read eproms, but most cartridges don't
contain eproms...

Thanks,
Trevor

I'm not sure I understand why Jindroush wants cart dumps.
The best way I know is with Omnimon.
There are cart dump programs that have you insert the cart while
the computer is on. Don't think they are as good an idea as Omnimon.
I guess the idea is to get original dumps to use on emulators.

Cross-posted to: pa.forsale,comp.sys.atari.st,comp.sys.atari.8bit,alt.atari.2600

Starting today. Atari Trak-Ball CX80, new in box. A Trak-Ball is a must
for games like Missile Command for the Atari 2600 and Marble Madness for
the Atari ST.

I cannot think of a way right off the top of my head. However, you can hook up an 800XL and 130XE to a SVGA monitor. That is possible by using a video converter. That is what I am doing and it works great.

The indus runs on the 11.5 volts..DC... If you plug in another power supply it will mess up the Indus. The Atari 5200 has a power supply that will run it. If you screwed it up I can fix it.

Original pool disk copies
James King p/d disk
Bob Klaas p/d software
The latter two have much of the Pool Disk first version listed above and
or more
i.e.: Atari Club software and other p/d files All cd's are full of p/d
software.

Price $5.00 per cd, $3.00 shipping and handling. If you want all 3 cd
in 1 shipment then the price is $12.00 plus $3.00 s/h

Reply here or send copy of this with your selection marked offl

As I wrote, here http://www.asw.cz/~kubecj/acartdp.htm are detailed
instructions. It doesn't matter what's inside the cartridge, you don't
need to open it. Small hardware modification/booting from tape will do.

Janka Gerhard wrote:
> > Some sort of database with games that require certain settings would
> be a really nice thing.

This is incorrect statement: Games do not require settings. But filesets
do. For example, I've got ATRs of 'original' Alley Cat, working on
400/800 only and 'patched' which works on all systems. So that it's ATR
of Alley Cat (the original) which needs correct setting (800b) to work.

> Another project I can't get myself to start with is to find out clean
> ATRs from the bad or incomplete ones

I wrote program called IMID (IMage IDentifier) which goes thru all the
images in selected directory a identifies the files. (It's similar as
rom-center or other tools for R0mZ C0Ll3Ct0rz, but not that stupid). It
could also go 'inside' the filesystems. I'm using it for sorting large
collections from other people who sent me their collections. I first use
standard 'dup' program to clean the duplicate files and then I process
the remaining files with my program. The files left are new for me.

So that I'm proud owner of program database without any dups, consisting
of:
1725 exe files (36 MBs)
1450 atr files (100 MBs)
400 cart file (6 MBs)

in 2864 directories (1 directory = 1 program with minor versions)

The program has too many drawbacks right now:
1) It needs lots of memory
2) It's not fast ;)
3) It does not support 'flags' for now - I would like to add 'invalid',
'overdumped', 'cracked' properties. It would be also possible to add
properties for emulators, such as 'Atari400', 'Basic', 'NoSIOPatch'...
4) It's not possible to add self-modifying images (for example
character/map disks)
5) I've got no time to update the database.

Russ Gilbert wrote:
> I'm not sure I understand why Jindroush wants cart dumps.

1) There are games which were not dumped at all (Pandora's Powerstar for example)
2) Multicart
3) What's the difference between wanting cart dumps compared to wanting ATRs?

> The best way I know is with Omnimon.
> There are cart dump programs that have you insert the cart while
> the computer is on. Don't think they are as good an idea as Omnimon.
I think that the hardware gadget I describe on my page or modification of MMU's handling of RD4/RD5 is as easy as replacing the EPROM with OS ;)

> I guess the idea is to get original dumps to use on emulators.
That's of course one of the uses.

http://tvone.com/cheese.htm

I found the 'cheese box' that does this. I have not tried it though, and
don't know about it's quality. It has a line doubler to match the 15.75khz
horizontal refresh to the 31.5 that VGA monitors expect, and takes composite
and S-video.

I was asking if anyone had schematics. for a composite -> rgb converter device
like this without the line doubler.

Subject: CCAG 2001 Classics Show

ATTENTION: RETROGAMERS, COMPUTER COLLECTORS, VIDEO GAME FANATICS!!!!

WE'RE BACK....

CCAG 2001 (Classic Computer and Gaming 2001)

If you like collecting old computers, video games, and enjoy using
them still, then come join us on:

June 30th, 2001 (Saturday)
9AM till 6PM

National Guard Armory
IT'S ON ROUTE 57!!!
actual address: 3520 Grove Avenue
Lorain, Ohio [Note: this is near Cleveland, Ohio]
(On Route 57, going North of I-90/Route 2)

IT'S FREE!
Both vendors and attendees!

Computer User Groups and vendors inside, flea market outside!

5,000 square feet of indoor space and an additional 5,000 square
feet of outdoor space is available along with ample parking.

Setup: 29th, June, 2001
6PM-10PM

Please Call Ahead for Reservations:

Jim W. Krych (jwkrych att n2net dott net) 440-979-9295
Fred M. Horvat (fmh att netzero dott net) 440-286-2566

And these other CCAG 2001 organizers:
Thomas J. McLaren (sirthomas att uk2 dott net)

Please visit this site: http://tomheroes.com/ccag.htm

As of 05/08/2001 User Groups:
==========

Erie PA Atari Group
TI Chips
Cleveland Classic Atari Group

Vendors:
=======

1632 Systems-From the UK!!!

It is called a VGA-101. It costs about $90 and I got it from a place in
Illinois called Matco. I also use this converter to hook up a ST to a
VGA monitor using a Video Key with the ST. Finally I was able to hook
up my Jaguar to a VGA monitor. Nice little device. Find/order it at:

http://www.mat-co.com/

Hi folks, thanks for the replies! I want to disable basic because I mostly
need to run binary loadfiles, and would rather stick a physical basic
cartridge in the event I want to play around with it. I can confirm
that there are no socketed chips :(. Is there a compatible chip that
only has the os on it that I would be able to swap? I plan to do
development using Amac. It is just a pain to hold down option
and turn off and on. I usually use a plain 800, but this xegs has a
cool detatchable keyboard!

Blair

3139. BattleZone Locks Up XEGS

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-20 21:05:46 UTC

My XE BattleZone cart locks up an XEGS. But it plays perfectly on a 130XE. Anyone hear of this before from any of the "new" carts? I have heard that some of the new carts will not run on 400/800's. I was really surprised. BattleZone for the 400/800 was supposedly written in about 1982, but never released until the XEGS was released. Perhaps they forgot to fix something from the "old code?" Any other carts like this that anyone has run across? Larry

I just got a message from Dave Barnes from TVOne, they have a product, the CMT-7 at http://www.avtoolbox.com/VideoConversion.htm. He says this will convert the signal, though it is a bit more expensive at $159 than the $69 cheesebox.

Before I have a go at it myself... has anyone improved
the single step options (G & O) within the monitor such
that it doesn't keep asking if you wish to return to the
monitor! If so can you send me the code changes.

Thanks,

Mark

Yes, theoretically the A8 could do up to 64K sectors with a suitable controller and RAM upgrade.

It is the Floppy Disk Controller, however, which determines the number of bytes per sector; the dcb at $300 (= 768 thru 779) simply tells Atari SIO how many to expect or to send after the drive/controller have been configured by the Percom Data Block.

Most Indus drive controllers can manage 256 byte double density sectors with the proper DOS (MyDos, Sparta, DosXL, OSA+, DosXE, SmartDos, TopDos, SuperDos, Dos 2.0D...). Usually it is unnecessary complication to alter those settings manually without a good reason. Barry Ruck and I constructed a utility in Basic to read single/enhanced density files with Dos 2.5 (all he had) and format and write the file to a double density MyDos type disk on his XF551 for transfer through his PC's 5.25 floppy drive to an MS-Dos app.

Indus at one time advertised some type of add on RAM and processor board to do CP/M or some such; I thought the stock ones just had 4 to 6K for a track buffer ala Happy's, etc.

Did a bit of experimenting too at the weekend. It seems that the
emulators do not give the right acknowledgement to the inquiry
for a second drive.

> A few of us have tried, some of the big lists have input from a group
> of us but there's so much still hiding in peoples attics etc

Yes. In mine for example :) For example I've never seen 'rails west'
anywhere else. Thanks to chipmunk I could save it to atr recently.
BTW, I've sent some of my stuff to Aaron but I got the impression
that there are people that rather believe in swapping than sharing.

> Btw, i'b be keen to get a nice atr of that Snokie you mention :-)

You should have got it by now. BTW, the end scene seems to be the
only difference.

>So to be really proper I suppose we have disk images and ROM images.
>Or is it disk image file and ROM image file?
>
If its on disk, then its a file. An image is a file that's not native to the current file system. I could have a Mac image file on my PC. I can't have the actual Mac file since it would be ruined by the PC's file system. Or Linux, or AmigaDOS. An image could also include a boot sector.

To me, a ROM is one of those DIP thingies. Its a physical piece of hardware that you can't have on a disk. If I were looking for the orginal Star Raiders game to download, I would be looking for a file. ROMs are a little difficult to download. If I wanted ROMs, I'd go through the local thrift shops.

I don't think that Smilin' Jack could have run Atari into the ground faster
than he did. He gave his boys enough time to stuff as much $$$ in their
pockets as they could.

What other head of a computer company lied through his teeth as much as he
did? He also was a complete failure in supporting anything he did release.
The only other problem he had was that GEM development stopped after Apple
sued DRI.

Not sure if you mean Aaron himself here, if so then he's a nice bloke
who I have sent a fair bit to (and have a few bits left which he wants
but hasn't *replied* to me since me moving, and my wife and I having
our 1st child..ie I was busy Aaron :-)) and he has traded back with me
so I can say he is fair as they come.

In respect of others, well there is a can of worms which i hate to
open but it's the only way I can explain the answer to your problem.

A few years ago or more there were a few of us who agreed with Yogi's
idea of an archive of titles, this practice was common place with C64,
Spectrum etc but at the time it was greeted with a wall of 'you can't
do that' or 'we want nothing to do with it'.

Now we respect there are some people still making a living selling
Atari 8bit but in most cases it's more hardware than titles and those
that still buy software will continue no matter how many sites there
are simply because they want the real packaging and the real disk.

The other side of that coin are the people making new carts from old
titles which prolongs the shelf life. Anyway, the point I am slowly
making is that there seemed (seems) to be a anti archive front of
people, this stunned me at the time as titles were slowly going AWOL
and the wall of silence meant they stayed gone forever.

I think there's still a touch of this going on, a strange thing
considering the idea's common place with almost every other 8bit
group.

I really wish there was a standard well known archive where people
were encouraged to upload working, complete atr's, exe's etc so to

make a fantastic whole as possible collection. As it stands there are places dotted all over the net with bits here and there but there's so much more that is missing or sitting just behind a person reading this in a box.

I really wish it could happen, no fancy graphics, screenshots or scripts to waste space, just a plain FTP site like Arnold is for the C64.

Well, you could lift either the pin on the PIA or the pin on the MMU that has
the BASIC enable signal and put a toggle switch between the pin and the hole
where the pin was. That way you'ld be able to switch back to 'normal' mode.

This 6ft extensioncable you used, is it a standard PC Joystick extension cable?

The keyboard does have the 4 console keys, they are just not used. If you'ld
open up the keyboard you'ld see that the inside is just like an XE keyboard.

Howdy folks

Somebody from the C128 scene gave me a couple of Atari disks and when I tried them the following started to happen.

Even if I load software I already have, the disk loads, then after I access certain parts of the disk, the head starts going inwards and a wining sound appears. I'm not sure where it comes from.

How can I determine, whether my XF551 is still OK, and if not, what has gone by by. The aluminum heatsink was quite hot (but then again, it usually is with XF's and the transistors (atleast the two bigger ones) where quite hot too. IIRC the smaller one at the side that faces the drive mech wasn't as warm.

Simple. On the real Atari I use the backside of the game disk as
the save disk and everything works that way.
On the emulators everything works (thanks to your tip !) when I
put the atr of the save disk in D2:. When I leave D2: empty it
doesn't. The only test still needed is to connect a second 1050 to
the XL with a write protected disk in it and look whether Fortress
then behaves as it does on the emulators.

Definitely not ! Aaron has his great website so nobody could accuse
him of not sharing things. And he surely was fair to me when I sent
him some of my files and scanned manuals. It's rather that I first
thought everybody would send him everything to get a complete archive
there and was somewhat disappointed when I learned that this is not
the case.

> A few years ago or more there were a few of us who agreed with Yogi's

> that still buy software will continue no matter how many sites there
> are simply because they want the real packaging and the real disk.

Well, I still look at all the vendors sites from time to time to see
if one of them has got one of the disks I never had a chance to buy

regardless whether I have them as atr or not. That's two different
things for me.

> I really wish there was a standard well known archive where people

> C64.

Sounds very nice to me. Even a complete list of what once existed
would be a nice start I think. But here I'm one of the 'guilty' too
since I haven't even archived all of my own stuff yet - that means
the things that I didn't throw away to make room when our first
child did arive :(.

>Indus at one time advertised some type of add on RAM and processor board to do CP/M or some such; I thought the stock ones just had 4 to 6K for a track buffer<

The board was called the "RamCharger" IIRC. A stock Indus has 2K of ram. So one of the features of the add-on board was that it provided a track buffer. About a year or so ago, an Indus with RamCharger was up on eBay. I really wanted it, but the bidding went into the high $200's (again, from memory).
Larry

3163. "Trak Buffer"

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-21 13:43:45 UTC
From: llpwhite@cs.com

Source record: 36687

Track buffers came up in another thread, so it prompted me to think of the Trak.
ATD2 models (and maybe others) have a 4K track buffer with an interesting twist.

As best I can determine, the track buffer only opens (becomes active) when Dos 2.0S is booted. (Will not open with Dos 2.5, MyDos, or any other that I have tried.) I presume this was Trak's compatability method, and it likely does some type of check sum(s) to decide to open the buffer. Anyone know anything more about these -- specifically, is there another "key" to open the track buffer? Another interesting "feature" is that the buffer is only 4K. Certainly enough to buffer SD or if it could be opened, ED. But too small to buffer DD.

> sued DRI.

Don't know if you remember those times really well, it was crazy. There was
the RAM shortage as IBM clones took off. Mircron, a RAM chip supplier that
Atari had contracted with wouldn't deliver as they had a better profit
margin selling to the clone market, Atari ended up suing them. Rumors were
rampant that most of those sales of ~$140 million<?> STs actually went to
clone manufacturers who took the RAMs out of the <$500 STs to put into
>$3000 clones.

I have a great deal of respect for the talents and work ethic of people in
the computer industry in general. One of the thing I have almost no respect
for is the retarded production schedules and planning the managment does.

We just went though another crisis with the dotcom meltdown.

Personally I have just had problems with micro suppliers as they *didn't* gear up micro production for ~a year while they over produced memory products for the cell phone industry which has since melted down.

All the organization of the California Gold Rush. They don't even have enough sense to be embarassed, it is always "Unexpected demand" or some other euphenism for "We don't know our butts from a hot rock". If farmers were this stupid and incompetant, we would have mass starvation in the US on a yearly basis.

I remember when carts were first being used in the early game machines and I'd always hear people refer to them as "tapes", since they looked like and were inserted in the console like the old 8-tracks.
But anyway, back to roms. In the gaming emulation community, most games for the other game consoles are images of roms and so a few people that are new to the Atari 8-bit community might think that we usually emulate a game by using rom images of carts rather than our normal route of using old files on disk images that are ancient pirated versions of the carts from times when our old 8-bits were still offered at Toys-R-Us.
(I know this can lead to another thread about how pirating software lead to the demise of the Atari, but I'm not ready for that one.) :)

Well,
TB has 18kb in length. Thus, you need a bank-switching super-cart,
unless you shorten it down to 16k. on the other hand: Why did no-one
ever produce a patched TB that uses a) only 16k and b) the cart area
(8000-A000) ??? To complicated ??? Or to many compatibility problems ???
I would like to have TB on a cart !!! -Andreas

Well,
what I hate about these archives and especially about the images in
those archives are the hacker/cracker versions of programs that have
notes like "cracked by [insert cracker pseudo here]" somewhere in the
title/intro or the program itself. Most of all, the real company and
author names or distributors are removed completely. I do not want to
give respect to any of the hackers/crackers, but to the authors or
companies. So, an archive should contain copies of Atari programs. But:
these copies should still have the authors and companies names intact.
And further more, there should not be a crackers note anywhere...

Source record: 36694

Just a joke (but true): [completely off topic !!]
Apple and the Apple logo are no trademarks of apple Computers. Nope !!
instead, Apple and the Apple logo are trademarks of Apple Corp. And who
the fuck is Apple Corp. (or Apple Corp. /UK to be correct) ??? Well,
that`s THE BEATLES... well known as Paul Mc Cartney, John Lennon, George
Harrison and Ringo Starr. And the Beatles were formed long before Apple
computers, so the name and logo belongs to them !! in other words, you
do not have an Apple computer at home, you have a Beatles computer !!
Unfortunately, there is one little difference between the Apple computer
and the Apple Corp. logo. The Apple Corp. logo uses a normal green
Apple, whereas the Apple computer logo uses a "colorful" apple, that
looks like Adam and Eve have tasted from... So there are two solutions:
1) force Apple computers to no longer use their name and logo (since the
Beatles have the older rights) or 2) judge apple computers and
especially their logo for throwing us out of paradise... Ha Ha
!! -Andreas

I'll pass this onto the Plus team...

If the program works fine on a real Atari without having to swap disks
then I should imagine they will have a look after 2.8.

Any chance someone has the information or files regarding Mike Hill's
Printer Port Pokey Sound Card? His site is (obviously) no longer
around, and I cannot find his files on the net anywhere.

TIA,
tom

Hi, please don't shout but I'm a bit of a newbie. After being a life long 16bit Atari fanatic, I've finally got a couple of 8bits (an XL and XE), unfortuantly neither came with an instruction manual and although I'm not really that frightened of the built in basic and DOS, I'm very scared by the tape decks I have to load everything through. I hope this isn't some sort of sacrilege but is there a way to connect a 3.5 inch floppy to these beasties (or the nearest poss..) and how easy is it to transfer stuff from tapes to disks?

thanks, all help will be greatfully recieved

Thomas

>-Andreas

Apart from the dodgy cracked but not seen to be cracked argument that
this generates the big problem is that a lot of the software is only
left in that state that you mention so unless a great deal of people
sit down and recrack the games but leave it without 'creds' then it's
never going to happen.

Personally i'd rather see a massive archive as complete as can be in
whatever state we can get the 'working' images in, sure I don't really
like the Jumpman that was done which was littered with childish
swearing in the high score table but we know there are other cracks
out there and if a game does have 'cracked by woz not woz' and that's
the only way it's left then that will do me fine.

If it's possible that a 'perfect' crack exists then that's the one we
would want first and foremost, and remember there are some fun hacks
as well, I did Sidewinder with a complete set of new screens and
called it Raid over Libya....

We can't ban all 'credz' cracks and get a near perfect archive if you
ask me..

Whilst what you say is true the problem is that when you did the PETS
monitor in you were left with nothing, today we can get another PC one
for peanuts :-)

You ever seen / heard a cheap monitor go 'crack' when someone plays
with Display Doctor :-)

I have an extremely rare complete Ultima III for Atari 800 xl xe computers up for auction this week, ending on Saturday. I also have many other goodies like a Zaxxon 800 xl cartridge, a Pitfall II cart for 800 xl (very good game!), and Rubik's Cube just to name a few. Please click on sellers other auctions after you go to this link for Ultima III. Thanks for reading my post and while I am at it let me leave my want list behind!

Ultima III auction link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1239967089

My want list!!!

800 xl Boulderdash cart I will pay $30 for in good condition
800 xl pastfinder I will pay $25 for
800 xl Alley Cat complete boxed I will pay $20 for
800 xl Agent USA complete boxed I will pay $20 for
Atari ST Moebius RPG complete will pay $25 for

I am not interested in copies at all. Thanks! -Satcom2

We chatted about this in #atari8 a couple weeks ago. The two most modern hard-drive expansions for the Atari 8bit are the MIO from ICD and the Black Box. The Black Box is a current, supported product. MIO and Black Box require an XL or XE level 8bit.

The Corvus is a hard-drive solution that will plugs into the joystick ports. It will work on an Atari 800, and I presume all the other Atari's. The Corvus requires a boot floppy disk to use the hard-drive. Unless you get the Corvus motherboard modification. If you can still get the Corvus motherboard modification.

Additionally there were some oddball hard-drive systems for the 8bit, among them Leading Edge, ATR 8000 (which did a bunch of other stuff too), and Supra. In my opinion you will be lucky to find a working Supra because they were rare.

I typically post announcements about the Tuesday IRC chat, so I wanted to say that I am not able to do it tomorrow night, as I will be on a business trip. Next week I certainly think I can do the chat!

Sometimes people do the chat without me which is fine with me, but I though I should say I won't be able to make it.

People liked when we did the doorprize quiz thing so maybe we will do that next week. I have a copy of One-on-One around here...

Later!

On the main topic I completely agree with you. But one of the
advantages of a central archive would be the chance to weed out
the bad cracks whereever an original file or 'good' crack is
available. Best would be a two part archive with 'checked 100%
original' files in one area and the other files in a 'original
still missing' area. And now I try to stop dreaming again :)

BTW, the only crack I ever did was 'Bruce Lee' and I couldn't
resist to put a tiny message in. I sent it to Aaron some time
ago so I think you'll find it at 'Holmes' now, replacing one of
that incomplete version that were there before.
But if anyone really were interested I'd offer to redo it to
100% original - except the protection of course :) - this time.
BTW, it really was a mixture of curiousity and fear of losing
the precious original that made me do that private crack then,
but I still have the original after all these years and it
still works :)

So yesterday I tried the TASKMASTER sector editor. Because you can tell the
drive directly which sector you want it to read. Silly thing didn't wanna read
the back side of the 5.25" drive. (my XF551 is upgraded with a dual drive
conversion as sold by CSS) The 3.5" mech had no problems what so ever.

So I connected this XDF mech to the BlackBox and the mech (taken from an XF
with 'connector blues') that normally is connected to the BlackBox (make that
'FloppBoard') to the XF551's internal organs. (had to change the drive
ID's) The problems stayed with the mech that had them. This meant I knew
where the problems were located. Somewhere inside the 5.25" mechanism.

Tried it again (I had the TASKMASTER search for a combination of characters.
Works great). Them all of a sudden it could read past sector 720. But it
stopped at 730. Tried a bit more and all of a sudden, the thing works again.
Problem gone.

I suspect one of them disk I got had something on them.

Is there a way to check, without the need to open up my drives afterwards?

CU Mathy van Nisselroy

3197. Unused connector on mechanism in XF551

Newsgroup: comp.sys.atari.8bit

The ataria came normaly came with a 5 1/4 inch dingle density or 'enhanced density' disk drive. The atari 810 and 1050 are the model numbers your after. There have been conversions to 3 1/2 drives but these requiere a third party basic. There are a fair few bits of software that permit you to save tape to memory and then dump to disk. Howfen dos being one particular one i have used with success. Unless you want to realy splash out on stuff I would recomend a 1050 drive and a copy of howfen dos. If you can get a 1050 with either a US doubler or a Happy after market/third party upgrade you have the right to feel smug. The US doubler permitted true double density and the Happy mod was for heavy disk/directory manipulation (IE ripping games, but never marketed as such) as well as true double density. There have been third party mods to 3 1/2 disks, but they are not common or standard in the 8 bit world

Because it's standard spammer reverse psychology, he or she seems to
be complaining so you go look to see what's so bad about the site.

Oops - that link was to the wrong file! (Livewire was something the
Jaguar group was interested in...)

The correct link is:
http://holyoak.com/atari/files/8BIT/EXE/paperweight.exe

Sorry for the mix-up!

In article <tgi7obn0cjhr48@corp.supernews.com>, ricortes@netmagic.net says...
>
>

>Don't know if you remember those times really well, it was crazy. There was
>the RAM shortage as IBM clones took off. Mircron, a RAM chip supplier that
>Atari had contracted with wouldn't deliver as they had a better profit
>margin selling to the clone market, Atari ended up suing them. Rumors were
>rampant that most of those sales of ~$140 million<?> STs actually went to
>clone manufacturers who took the RAMs out of the <$500 STs to put into
>>$3000 clones.

I remember the times pretty well. Like the blitter upgrade for the early STs
that were promised and never delivered. Or the XEs bundled with the Amy chip,
and the Amy never saw the light of day. (didn't he show something like 5
different XE models one time?) RAM prices weren't too bad until the US and
Japan got into a little tiff over Japan's dumping RAMs on the market trying
to drive everybody else out. (the two banks of 256K chip I had in my XL ended
up being worth more than the rest of the computer).

(can't say I believe the story about the STs being used for the RAMs. The ST
only had 512K, we are talking about the $500 STs. My monochrome MegaST2 cost
me $1200, I bought it in '88 or so. I jumped ship to the Amiga in late '89 I
mean, 512K wasn't worth 500 bucks).

>I have a great deal of respect for the talents and work ethic of people in
>the computer industry in general. One of the thing I have almost no respect
>for is the retarded production schedules and planning the managment does.

Depends on if you want to talk about Jay Miner, Alan Kay, Steve Wozniak or
Bill Gates. 8-) Smilin' Jack and his boys were all managment. I was really
surprised to see Atari self destruct after C= did so well with an inferior
product. I used to rant and rave that *>I<* could do at least that bad a job
running a company. 8-)

Those were the days. 8-) Smilin' Jack at least made things interesting, even
though he couldn't deliver anything.

Hi there,

Thanks for the reply, it was extremely helpful :-)

Sorry for sounding dumb but just to clarify, the 810 and 1050 take the 3 1/2
floppies?

thanks again for your help, I'll be off to e-bay as soon as poss ;-)

regards,

Thomas

nope... 5-1/4 floppies - NOT HI-DENSITY! You need DSDD (old 360k) floppies
for best results

Best rumor I heard was ~Jack offered the designer of the ST a huge block of
Atari stock and penuts for wages to jump ship from Commadore. The guy got
the ST out in about 6 months, made millions on his stock options, then Jack
stiffed him when he asked for better pay/more options to continue working
there.

So he quit.

Small wonder ST development was stagnant from then on. There's a saying in
the USA "You dance with the guy who brought you", I think the Chinese
equivalent is something like "We have gone to the well to draw water
together", the Tramiels didn't seem to quite have the hang of that.

3210. Avalon Hill 1983 catalog!!! WOW!!

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-23 10:16:17 UTC
From: Mo <mygranny@swbell.net>
Message-ID: <J_JO6.393$F93.222762@nnrp3.sbc.net>
Source record: 36634

I made a big score on some Avalon Hill games including "Quest of The Space Beagle", "G.F.S. Sorceress", and I got the boxes and doc's for "Andromeda Conquest","Legionnaire","Bomber Attack", and "Planet Miners". Interestingly the space beagle and sorceress were on disk! I thought all AH games were cassette. I'm going through all of the documentation and I'll be posting as much as I can when I can. For the moment, I've got the 1983 catalog up. The 1984 catalog hardly mentioned computer games at all except for a parts/compatability/price chart, which was printed so small I couldn't get a readable scan on it. If anyone wants to check out the 1983 catalog here's the link....

http://members.tripod.com/~chainsaw1661/crush.htm

Probably within the next week or two, I'll add some more stuff.

(I thought about this some more, re: ANALOG disks.)
Well, you know I guess about all ANALOG programs are available,
you just need to know the program. The programs are spread all over
the place, spudster probably has about all proggies, but not all the .atr
of the monthly disks.
Cyber Roach has the ANALOG project and you could dig programs
out of his project, but I'm not sure if he wants that, and he's only got
several of the 79 magazines, not a whole lot.

Hey that's great, when I get a chance I'm gonna make a set of ATR's of all the Avalon Hill games I have and put them up on the homepage. I'll try to do a better job than the last one's I put up 8-). If you have the means could you make ATR's of yours and swap with me? I'll give you full credit on the homepage! Your name will be up in lights! I haven't tried it yet, but I think space beagle's copy protected and I'll have to use the prosys cable for that one. Man, I tell you what, somebody's got to do something fast. These Avalon Hill's are becoming extremely hard to find! I was amazed when I found that Microprose had released 'Diplomacy' for the PC, I heard rumors about other titles they released, but haven't seen any of them yet. On another note, I noticed that the AH Atari 2600 cartridges are getting top dollar on the online auctions, most going for more than they cost new, which is unusual for old video game carts. I have a one page ad for those as well that I haven't put up yet.

I don't know, $8.00 shipping for 75 disks isn't that bad. I once bought a lot of about 80 disks and it was quite heavy! Doesn't look like too bad of a deal, what you have to look out for though is the mention of "they're not all original" which means you could be getting nasty, gooey, smelly disks. It sounds funny, until you wind up with $28.00 of funk. Of course that could happen to original disks just as easily, I think I would want a picture before I threw money down. 8-)

3224. OT: ish Re ICQ and users (Longish)

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-24 10:13:48 UTC
From: Paul Irvine <mclane.dellos@btinternet.com>
Message-ID: <ueipgtc6b0rn5qcbnl2jv2oq6f56e5ptct@4ax.com>
Source record: 36548

Anyone in here who has spoken to me knows I am a nice as pie bloke who would help you as much as possible, you can mail me or ICQ me and I normally answer quickly.

Now on ICQ many people like me select authorise user so others must ask you to allow them to chat, this saves lots of mega spam messages. So you still get a message but they can add a reason for you to auth them, if I get messages that just say the default 'Please auth me' then they get ignored as I long decided that unless I recognise your name or you can be bothered to fill in your details or add a reason then I presume you are a spammer.

So, I start getting messages with no detail from a user, I ignore them and they keep coming. Eventually I write back to the user and ask who they are?

No answer, so more messages for auth come so now I am just getting annoyed and decide to send one last message with 'don't be an idiot I have asked you now p** off' and lo and behold the next day the guy complains I am being rude and all he wanted to do was chat about Atari things.

ARRRRRGHHHHHHHHH...

Don't you just hate it when someone has a communication medium like ICQ and can't be bothered to communicate properly. Why do people think there is a box with the words 'add your reason for asking for authorisation' on ICQ..

Believe me, it isn't restricted to ICQ, nor is it a modern phenomenon.

Many years ago, Tom Lehrer recorded an album in which he talked about difficulties with communications. He opened a snail-mail letter which said, "My darling, I love you and I cannot live without you. Marry me at once, or I will kill myself." Tom fretted about the letter until he noticed that it had been addressed to: Occupant.

3227. Help - 1050 died on me!!

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-24 14:44:29 UTC
From: Linda Naysmith <linda.naysmith@blueyonder.co.uk>
Message-ID: <h79P6.25180$eJ4.2944928@news1.cableinet.net>
Source record: 36551

My 1050 fitted with a US doubler, died on me yesterday. The power LED lights up but there is no chug from the drive when powered on. Does anyone know where I can get it fixed in the UK - preferably Scotland? Or where I can get a replacement?

Thanx for any help

Linda..

That's quite a nasty situation there..

As to my moan, I just found it so bizarre that the guy / girl thought I was
rude after me trying to get an answer twice.

The world can be a tad odd sometimes :-)

3229. Dead power supplies

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-24 18:46:30 UTC
From: Trevor Holyoak <trevor@holyoak.com>
Message-ID: <bllqgts40sbadvq0jcqs3rm4k7csh38hpp@4ax.com>
Source record: 36553

Would anyone be interested in any dead power supplies for a 1050, 800, 400, etc.? I've got a bunch that I'm trying to decide whether to throw away, sell, give away, etc. The shipping alone on these things would not be real cheap.

Thanks,
Trevor

Yikes!,

I assume that 5 1/4 disks are now unavailable? or can you still get new ones somewhere?

regards,

Thomas

Try places like Staples or large office stationers. They don't stock them
but can usually order in. Remember don't get HD (High Density) for an 810 or
1050 drive.

Good luck

Paul

Might not be worth the freight, although very often it was just the internal fuse that put them out of commission; they are normally semi-easy to open and repair...

>Trevor Holyoak trevor@holyoak.com inquired:

I find them at yard sales, flea markets, and thrift stores here in town all
the time - usually pay nothing for them.

A little trick I learned is that some army surplus stores have them in
stock. Just get them from one with air conditioning! Also, Radio Shack still
carries the 5.25 head cleaner kit.

3240. [Story] A FIERY TALE

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-25 11:54:10 UTC
From: Greg Goodwin <Greg.Goodwinp0.f2.n8.z8@fmlynet.org>
Message-ID: <0018c3cd@fmlynet.org>
Source record: 36568

FamilyNet Newsgate

I've noticed that no one has read this story I created.
Well, a week ago I sent this off and asked if anyone could figure out where the strange mystic words of the Tages came from. The strange words were actually from the Archon manual (XE) only reversed. Many of the characters of this story were inspired from Archon and Joust. ;)

Anyway, again, would love to hear comments on this story, so drop me a letter when you get a chance.

Take care,

Doctor Clu

@>-->----------

> [This is the story I submitted for the fictional literature contest in a

> |__|he night spun its cool breeze as the azure world hovered in the heavens
>above. It was a beautiful sight, especially high a top the castle turret wher
> Nathaniel stood watch. He had seen the view thousands of times. He has
> ventured, sometimes fought in the fields of emerald or the bluish mountains
>that lined the horizon. He had even ventured to the oceanic world that danced
> with his own. But tonight they were all somehow different.
> He remembered how as a youth he would peer beyond the castle walls lost
> in thought. Long before he has become a knight, perhaps in the days that he
> longed to defend the realm as a knight, he had spent time on the walls,
> thinking, dreaming.
> Nathaniel hadn't realized it, but after so many years, he found himself
> cautiously in thought again. Tonight it was a job, but perhaps it was his
> younger days of dreaming in the same spot that made his occupation more

> bearable. All that was missing was...
> "G ' Evening Nat! " hearing this, things were more back to normal.
> Nathaniel turned around to see a man wearing stunning golden armor a top a
> large bird. The winged guardians had long defended his world as a neutral
>entity, and yet Nathaniel had come to know their world through this head stron
> guardian. Well, perhaps he was no more head strong than Nathaniel had been.
> Now his old friend, Xorsos, simply looked down a top his mount, and his mount
> looking at him in like fashion, very stately and noble.
> "So, thinking about events after the wedding " Xorsos asked with a
> wink. Though the appearance had changed with time, obviously his old
> friend's mental state had not budged.
> "I would certainly hope so, " a somewhat deep, somewhat gravely voice
> echoed slightly from behind a wall. A second later, a seven foot tall, and
> roughly six feet wide stone creature climb a top the platform that Nathaniel
> was standing on. It was a Roech'On creature that Nathaniel also knew well.
> "Bahri! Alright guys, I like the company, but I am on guard.. "
> "Never stopped you before." Xorsos said cutely, dismounting from his
> majestic bird.
> "Besides... with the three of us up here, someone would be better off
>attacking another castle tonight." Bahri "Let me guess, you're thinking abou
> the fire purging aren't you?"
> Nathaniel could only sigh, "Damn straight. I don't like the idea of
> walking through a fire. Since when did walking through fire have anything to
> do with getting married?"
> "Been burned at the alter before have you?"
> Bahri lightly slugged Xorsos for the previous comment. This of course
> sent the fully grown winged guardian stumbling the length of a typical sized
> man.
> "Well Nat in all seriousness, it's been with us since the arrival of
> the Tages" Bahri confirmed "being the 'sagious ones" they decided to make a
> test of the heart to make sure that people were really committed to one
> another."
> "In other words," Xorsos interceded smugly, "the Tages got tired of the
> double work of marriages and then later divorces."
> "Sounds like it." Nat added with a laugh. "So Bahri, ever heard of
> anyone not making it?"
> "There are all kinds of stories of men fleeing from the pit of fire,
> wetting themselves as their feet run faster than their heart... "And as this
> is being said, Xorsos, standing behind Nat, signals at Bahri silently yet
> frantically to change the subject.
> "Ahem!! But enough of this... we know you Nat, and you are much better
> than all those." Bahri said with a broad smile.
> Nat questioned not only his friend but his own heart. "What if our
> love isn't pure. What if this is not it?"
> "After all these years you two have been courting each other!
> Everything you've been through, the hurdles you've overcome..." but Xorsos's
>words only seem to create a uneasy forced smile as Nat's reaction. An awkward
> wisp of time followed where none knew what to say only to be toned by Bahri
>adding in a monotonish voice, "I guess that last question is the part you have
> to answer. But we're here to keep you company till dawn all the same."

> Nat's eye's watered slightly at the words of his friends. He glanced
> them a smile of thankfulness, and then looked upon the horizon till dawn met
> his glance.
> ___
> / \
> / ^ \
> / /_\ \
> / _____ \
> /__/ __\ large crowd had gathered by the mid day to the place where the
> ceremony would take place. The stage stood as high as six men, and was wide
>enough to hold thirty. In truth, this was the sacred "grill" that many couple
> had walked upon for centuries. And today was to be no different. On both
> sides of the stage were the visible catwalks in which both wedding parties
> would emerge.
> The crowd was a buzz of activity, but hushed to a distant flutter as the
> gristly tage, Jeoff, took the stage.
> "Ladies and gentlemen. Family and friends of the bride and groom. We
> are here because two hearts have decided that they can no longer in good
> conscious be apart. With this, they have decided to test this connection of
> spirits to see if it is pure enough for their souls to be eternally bonded.
> In the early days when the fates brought us to this world, men and
> women's hearts, though sometimes true, often deceived them. Many spirits and
> hearts were joined only to later find out that one or the other party had not
> been true to themselves or those around them. And so from the ashes of bonds
> lost rose the rite of fire. A tradition of centuries that will test Sir
> Nathaniel of Talonlorn...."
> And with that, Nathaniel and Bahri emerged from stage left of the
> platform.
> "...coupled with Kyrree of Alofington. Together today they will confront
> any remaining doubts they have about their connection with each other. Of
>course there should be no problem for their love is true, right?" Jeoff adde
> in unexpected humor. As the crowd laughed, and Nat off to the side chuckled
> nervously, Jeoff's grin faded and grew serious as the ancient words were
> spoken.
> "Launam srenwo rouy ni deniaplxe
> Sa elosnoc rouy fo pot eht no tols...."
> Jeoff raises a flask above his head and towards the heavens as his
>voice raises in intensity. All the while, he proceeds to lift off the stage,
> making distance between him and the platform.
> "Egdirtrac .. eht otni...
> Egdirtrac ... emag nohcra eht tresni!!"

> flames and above the audience, beckons for Nat and Kyrree to commence. Not
> that Nat had been watching for the Tage's beckon call. Truth is, he was
> paralyzed in fear.
> "Nat... " Bahri said, looking at his friend from the side, "Common my
> friend... snap out of it!" Bahri could see that Nat was understandably
> overwhelmed by the flames.
> "I can't see her Bahri!! When I could see her, when I could look
> into her eyes and she in mine I was alright... but the flames are too high!!"
> "Hey buddy, you chose me to be your best man because I was 'the wall',
> remember? You'll see her again once you enter the flame... but you have to
> make that step Nat!"
> "What if she is not there to meet me there?"
> "None of the legends ever talk about anyone getting incinerated
> because their love's heart was not true. It is all about your own heart."
> Nat could feel the sweat pour down his brow, and it strangely cooled
> him. He closed his eyes as the sweat hit his eye lids, and for a second he
> could see her. In that fleeting second he saw not the image of her, but
>remembered all that she had been to him. It was as he remembered the tapestry
> of their experiences together that he was able to then patch together the
> beauty that he had come to know. If his love was not true, he knew that she
> was at least worth dying over to find out.
> The knight stepped forward into the flame, and when he did, a blast of
>scorching heat hit him, flowing from his feet all the way to his head. He fel
> he would pass out, but yet, he was not ablaze. He stepped further and still
>further and found to the comfort of his own senses a familiar figure with long
> hair being blown astrew. He met her form with his hands. Her sides and arms
>guided him into an embrace, and as they stood there alone with nothing visible
> beyond the wall of fire that they stood amongst. As they held each other
> tightly and whispered how they felt in each other's ears, they cooled each
> other slightly with each other's tears.
> _______
> | \
> | .--. |
> | | | |
> | '--' |
>|_______/uring the celebrations that followed, a large figure had found his wa
>back to the stage at a time when all others had moved on. Curiosity had drawn
> Bahri back. He walked on the stage and found a bit of the vial the tage had
>thrown down. Finding to his surprise some liquid remaining, he sampled it, an
>then roared with laughter. His laughter was cut short by the intense voice of
> Jeoff.
> "Disrespectful fool!! You will pay for your trespass!!" And with
> that, he threw a vial onto the stage, and once again it burst into blame with
> Bahri still standing on it.
> Bahri could only laugh amongst the flame, "Jeoff... since when was fire
> started by water?"
> Jeoff gestured at the flames which immediately ceased and then floated
> over to Bahri. Bahri continued, trying to look bold while Jeoff stood before

>him. "I mean this is amazing. Vial of water, the light show, and gust of win
>from beneath. Obviously leftover techno stuff from the great ship that brough
> us here. But why?"
> "To answer your original question, fire was started by water dating back
>to the time man doubted his own honesty. You have to admit, we've had many ru
> from the fire, and just as many stay connected and remained true to their
> vows." Bahri could only agree with Jeoff.
> "Oh, and Bahri, we are set for this ceremony two phases from now when
> you are to be married. You dare tell a word of this and I'll make you my one
> time example to show this is not a hoax..."

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System.

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st. The
Atari computers themselves have been around since 1979.

There is no charter for comp.sys.atari.8bit. (newsgroup pre-dates the custom)

comp.sys.atari.8bit is not moderated.

DO NOT POST BINARIES in comp.sys.atari.8bit, use the binaries groups instead.

Okay I posted ATR's of 'Quest of the Space Beagle part II' as well as an ATR
of GFS Sorceress on my homepage. The space beagle requires Basic the
Sorceress does not. Also if you scroll down the page, you'll notice that I
added a PRO image of Adventure International's Diskey Disk Editor. The PRO
image wouldn't have been necessary except for 2 short sectors at the
beginning of the disk. When I have the time I'm gonna go back and make a
disk image for each of the BASIC Avalon Hill games that I put on that one
disk image and I'll make them auto boot.

The link is:
http://members.tripod.com/~chainsaw1661/crush.htm

It is a commercial release. I think it is a Polish one, but it might be British. Mr. Bacardi has all the details on his webpage. I believe that HIP graphics are used. The graphics are very very good.

This was one of the greatest games for the early Amiga. It is especially a good two player or party game. Most of the elements come through very nicely in the 8bit version.

It does not work on the 800, alas!

The Black Box aka the Bob Box from:
http://www.nleaudio.com/css/index.htm
supports SCSI hard drives as does the MIO from ICD now FTE (any presence?)

Supra had one also and SWP advertised an adaptor for the ATR8000 that I never actually saw. Bob Woolley had a mod for a 2.5 inch IDE in an XL printed in Atari Classics; Clarence did have the details here:
http://members.nbci.com/_XMCM/atarimods/index.html
I have once seen a European mod out in cyberspace somewhere, but its viability is not known to me.

Absolutely! This was probably my favorite game for the ST, and not bad on the C64, either. I'll be interested to take a look at the XL version. I'm not much of a game player, but this was a "keeper".

It's not a 404 not found page, it's Tripod's file hosting page that comes up
with a link to the file. One of the drawbacks of tripod is that they throw
their name up whenever possible.
I just tested it again and it works.

HIP doesn`t exist in this game

I`ve got this game ... if someone want to see disk cover i could scan it ...

greetz from Poland

dely.aarea

ps. if you think that my english is poor think about your polish :)

There is an Eastern Front .atr file at:

<http://www.pullmoll.de/mess/a800/images.html>

It is a good way down the page, and it is in a file called "easternf.zip".

Now all you need is an emulator that uses .atr files...

It has like 32 colors grayscale (or sepia tone) at a higher resolution
than skinny pixel mode, doesn't it? That would make it HIP, I believe!

Not 100% sure though...

Hi

we (my and my wife) are looking for links with Californian residents in
order to improve our american language
our hobbies:

-atari
-home theater

We are living in france near LYON (middle of france) and we'd like to invite
a couple of californian here in france and going in USA to learn the US way
of life, language ...
and this for 15 days long

I'm posting this proposition in this new because we prefer to do exchange
with people who have the same hobbies, it's easier to speak about it !

Howdy!

I was completely flabbergasted when I learned earlier this day there's a version of "Another World" for the 8bit. Does anyone have detailed information on how this came about? Was this game ever officially released for the Atari XL/XE?

Secondly, there seems to be no intro, despite what the title screen says. Moreover, after a few "deaths", the player loses its shape. Is that due to I'm playing it on an emulator?

Frank

Thanks for the info - I remember Derek Ferns and Micro Discount, but had lost his address, I will drop him a line. I found another place on the web called 'Atari Workshop' which is down in Berkshire, I don't know if they go as far back as 800XL's and 1050's but I've sent them an e-mail asking.

My part of Scotland is Livingston, West Lothian. Aliens fly past but don't stop.
Do you have an 8-bit Atari system?

Linda.

I would presume it's like the Barbarian that turned up ie a hackers version.

But since Barbarian is as nicely done as it is I would love to see this
cover of Another world (although I think the polygon count might be low :-)

I remember a mod in Antic or maybe Analog to put a write protect defeat switch in an 810. I even remember the mod used a rectangular switch, so that you couldn't just drill a hole. But I can't find the article. Anyone else remember this and maybe have a feel for the approximate time of publication? Or was I just fantasizing?

Hi Paul,
I've posted a copy of this cool game to my homepage.
http://homepages.paradise.net.nz/atari/
The image did indeed come from the same place as barbarian.
And from what i played of it, it's a great port! :-)

I have to admit, that, this is probably the biggest surprise game I
have ever seen done for the 8bit Atari.

Are there other games like this out there? I hope so!

Thanks for the info Aaron

Btw, has your email changed or got a problem?

It's just that I wrote to you 2 or 3 times re mags etc now that I am settled
after a disastrous year (loss of home, my mother dying etc etc) and wondered
if you still wanted the Atari Users I have?

Let me know, I was going to keep them as they are the issues with my reviews
in but I don't have the space now I have to keep a load of stuff here that I
used to store at my mothers.

Had to bin all my hardware and the few floppies I had..

Btw (2) Did you ever try those tapes I sent, just wondered if they were all
ok?
--

As long as you remember them they will always be with you..

Top Ten Uses for Dead Atari Supplies

10. Cutoff wires and use as paper weight
9. Hold doors open
8. Drill holes and attach to barbells
7. battery substitutes for those nice SF Giant fans
6. Auction on eBay ("I have no way of testing!")
5. line them up in road as a speed hump
4. low cost "fashion" earrings
3. great in the kichen for smashing garlic (from Ronco)
2. decorative garden pavers

And the number one use is:

1. Anchors for departed mobsters living in the river

Trevor,
Chances are your power supplies are NOT dead. Atari powersupplies have
a small thermal fuse stuck in the winding under the paper. You can
break open the supplies and by pass the thermal fuse. I would put the
supply in a vise, apply pressure until the case bulges a little, then
rap the case smartly with the back of a screwdriver handel until the
case pops. one of the wires should go from one of the prongs into and
out of the windings, tear the paper and you should see the thermal and
be able to pull it out. Cut it free and scrape wires and twist
together and tape. If you are not familiar with electricty see if yiou
can find someone who is and has a meter to check it out.

I wouldn't try it with those limited directions; no "J" numbers or even a hint of where to look for that connector. Don't know about the 810, but the 1050 has five or so of those little jacks! With no schematic or sketch of the boards, that was definitely below Analog standards plus 810's were getting less common as the 1050 was out 2 1/2 years and dropping in price. They don't even mention any similarities or if it could be modified to the newer drive.

I prefer to splice an inline fuse holder in place of the fuse and thread it through a couple of small holes in the case; it is still fused and now replaceable with no need to re-open that case...

Its also a good idea because its very bad form to hardwire anything
onto the mains without some kind of over-current protection. A
primary winding could short because the enamel insulation of the
winding cracked after long-term thermal cycling, or simply from age-
and without a fuse you could very quickly get a fire.

If you're inclined to the labor & space permitting, circuit breaker
switches are available in the several amp range and are about the size
of a smallish toggle switch. They're nice because you get the current
protection together with a real switch on the transformer primary.

3294. XF551 mod???

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-29 08:12:43 UTC
From: Mike Mulder <nonsmoke@hotmail.com>
Message-ID: <9evlt9iou1@blue.nl.gxn.net>
Source record: 36517

Howdy!

I tried the following:

The XF551 case actually contains an interface and an internal 5.25" diskdrive. I tried to exchange the drive with a 5.25 floppy drive from a PC. Unfortunately it didn't work. Tried to mess around with some jumpers but it just spins and stops, or keeps spinning. The Atari couldn't access the floppy.

Is it possible to exchange the 5.25" disk unit to make the XF551 capable of using larger capacity (DS/DD) disks? I also like to overcome cutting the disk and flipping the disk for double side access this way.

Or am I doing stupid ;-)

Regards,

Mike.

>Unfortunately it didn't work. Tried to mess around with some jumpers but it
>just spins and stops, or keeps spinning. The Atari couldn't access the
>floppy.

Look for a row of ID jumpers (2 rows of 4 pins, of which two are jumpered).
Make sure the mechanism you put in has the same setting as the one you took
out. IIRC, Atari sets them to ID1 (you can choose from ID0 to ID3). If you
look at the mech Atari used with the slot toward you, the ID jumpers are at the
top left side, under the hole in the sheet near the corner.

>Is it possible to exchange the 5.25" disk unit to make the XF551 capable of
>using larger capacity (DS/DD) disks? I also like to overcome cutting the
>disk and flipping the disk for double side access this way.

You can replace the mechanism, but:
Make sure the new mech isn't longer then the one Atari used.
Make sure it's set to the same ID (read above)

You can replace the mechanism for one with a higher capacity, but the higher
capacity can not be used. It will only use 1440 DD sectors max. Unless you
either get Bob Woolley's or Bob Puff's (http://www.nleaudio.com/css) 3.5"
conversion. Woolley's is cheaper (DIY), Puff's is more advanced.
1.2MB mechs won't work at all IIRC.

If you wanna flip disks without cutting, go and get one of the other upgrades
by Bob Puff (see above site), IIRC it's the XF Enhancer. It will eliminate the
need to cut a second timing hole.

Best is just to use a DOS (I prefer MyDOS, as do both Bob's mentioned above) to
format both sides of a floppy as one disk (quad density Atari called this).
This eliminates flipping (and therefor RSI :-))and the need to have DOS,
DUP, bootsectors, etc. one both sides. It also enables you to put bigger/more
files on a disk.

Mike,
Contact Bob Puff at CSS http://www.nleaudio.com/css/products.htm.
There is a mod that he sells called he XF Upgrade. It is a somewhat
simple mod that allows you to make flippy disks (makes 2 180K disks out
of one) with no notching. Nice piece. I had one for a long time. Worked
well. More info on his page. BTW with SpartaDOS, BeWeDOS and MyDOS you
can get 360K DSDD floppies anyway. If you need more, check out Bob's 3
1/2" drive upgrade.

Source record: 36525

Bill.
Peek(43234)
96=B
234=C
162=A
Everyone but me knows 'C' is the best of the Atari BASICs.
So try 'C' until it messes up so much you want to quit messing with BASIC.
Then go back to 'B' and you'll find it is much more stable.
With 'B' LIST,NEW,ENTER,SAVE every 6 or so SAVEs.
SAVE your work every 10-15 minutes whichever version you use.
If you get a unloadable SAVEd file, you can use J. Kubec's PC
retrieving program, or I also have one for the A8.
'B' is a recompile of 'A', and my lone opinion the more stable.
'C' is just a 12 byte patch of 'B' that fixes a few bugs and introduces
more than it fixes.

3304. 400 DIY memory upgrade ?

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-30 03:13:53 UTC
From: Dave Pompea <dmpsyst@netacc.net>
Message-ID: <3B14740D.CF5B2ED7@netacc.net>
Source record: 36528

A very long time ago, some company sold DIY plans to take the 16k internal memory board of a 400 up to 48k (or maybe 64k). I bought the plans and did a couple of boards. The modifications consisted of substituting of the 16k chips (4116 ?) with 64k chips (4164 ?), a few minor changes to the memory board and IIRC, a couple of trace mods to the motherboard - which were perhaps optional - if you wanted to go beyond 48k.

As I've moved a few tines in the last 20 years, the instructions have, of course, gotten lost and I've picked up another 400 a few years ago and I'd like to dust off an arcade game that I wrote in assembler (99.9% done) and see it again. Along with some other programs.

Anyone remember the instructions for the upgrade and have it ??

Dave

To: LLpwhite <llpwhite@cs.com>
Subject: Re: Atari BASIC rev. - how to find?
Date: Wednesday, May 30, 2001 8:33 AM

Hi, Larry.
I don't remember exactly. Lock up while programming. Mess
up variables. I do remember trying it, and going back to 'B' because
it was worse for editing/losing the program due to lock ups/etc.
Mentally, I don't like it because it is just a 12 byte patch of 'B',
this means just a hack essentially, not a real correction of anything
that I know of but the append 16 bytes on SAVE that 'B' does.
I should be more scientific, but my opinion comes from my experience
trying to program with it, and I don't do much programming any more.
Sorry I can't be more specific. It just comes from a lot of experience
with 'B' and getting bad results when I tried 'C'.

Message-ID: <3B152A01.7C8D2E77@mail.uni-mainz.de>
Source record: 36531

Well,
the story of the Tramiels (or the Tramiel Clan) could be written in at least two books: a) one book that covers a story like "Schindlers List" and tells the mighty reader how Jack survived the Nazi terror in Poland, survived the ghetto of Warsaw and finally escaped to America where he changed his name into - you guess it- Jack Tramiel (sorry just forgot his original name) and b) a second book that tells his US story from being a worker, then a manager of different companies (Commodore and Atari among them) and what he did then and does today...

In other words: Jack Tramiel is a Survivor, so is Atari (Atari survived Commodore; Atari did not went bankrupt), what more can we ask of him ?!?
-Andreas

P.S.: Just read a funny letter from Leonard Tramiel a few weeks ago. In this letter he was discussing several things with the programmers of "Wolfenstein 3D" on the Atari Jaguar (a quite old letter). The funny thing is, he was asking the programmers if they could put more blood into the game, more different weapons to kill the Nazis, the possibility to burn the nazi signs and Adolf Hitler pictures with a flamethrower, etc. etc. Well, if you know the background of the Tramiels and how they survived the Nazis, this letter was/is really a funny thing...

Hi,

> And finally. The C64 and Amiga users will not like the XL version,
> because you cannot cut off the head of the other Barbarian... -Andreas

I did get it working in a two player mode and it was quite easy to
chop the still guy's head off! Unlike the C64 version though, there's no
blood, plus the green servant isn't there to drag the body off, plus
the snake heads aren't animated...

Aside from that, what a good conversion, I was shocked when I
saw the post that said it actually existed! It was on my list of conversions
to do (actually the C64 source code is some of the tidiest written
stuff I've seen!). Oh well, more time to get 'Elite' working...
a demo very soon I promise (just got to debug the 3D routines)

If anyone else wants to have a go at a conversion I can help a bit,
games to do... Sentinel, Rock'n'Bolt or Nebulus.

Regards,

Mark.

I have never had major problems with any and none so far with "C". Was probably lucky with "A" and always careful with the "B" SAVE business. Prudent use of LIST with a RAMdisk and a cold start switch.
>"Russ Gilbert" russg@en.com

> It just comes from a lot of experience with 'B'
> and getting bad results when I tried 'C'.

-Ron

Experience is something you don't get until just after you need it.

3318. coleco joystick

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-31 01:32:52 UTC
From: Indiazxxx <chrono@valleyip.net>
Message-ID: <thb7kpsge50p83@corp.supernews.com>
Source record: 36542

I don't want to be a troll but I don't know what other place to post this question; I own a coleco game console and was wondering if someone has one of those joystick things that you can connect to the stub of the game controller that is pre-packed with the coleco. I want to be able to play my cartridges with a full joystick instead of the stub. I think that is why the atari was more popular. Also is there a message board for Intellivion? I was thinking of buying an Intellivision but that is just a pad and not even a joystick. Anyway . . . any help or comment is welcome. Thanx.

3320. Van Halen demo

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-31 04:59:53 UTC
From: Bob Ryan <ryanr@one.net>
Message-ID: <3B15CFC8.7E2FA0C4@one.net>
Source record: 36544

Does anyone remember the demo (?) of Van Halen that was around in 1984
or so?

It was about 20 to 30 seconds (maybe shorter) and it was a portion of
the song "You Really Got Me".

I remember having it on a disk and when it booted it played the snippet.
Sounded really good.

-Bob

3321. Avalon Hill / Epyx releases

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-31 09:49:33 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3B1613AD.A9F8A5D3@asw.cz>
Source record: 36546

Hi!

As 'Mo' is still announcing his page containing Avalon Hill and Epyx
catalgoues, I've created kind of master release lists for these
companies.

The checkboxes mean:
[x] I've got the ATR.
[ ] I don't have it, and I hope some kind soul will find it in his/her
collection.
[-] Re-release / never released / in another list.

Files are attached.

It seems I'm missing these games from Epyx: Alien Garden, Curse of Ra,
Danger in Drindisti, Datestones in Ryn, Invasion Orion, Keys of
Acheron, The Nightmare, Sorcerer of Siva and Upper Reaches of Apshai.
And too many Avalon Hill releases to list ;)

3324. Best Disk Editor

Newsgroup: comp.sys.atari.8bit
Date: 2001-05-31 13:46:56 UTC
From: llpwhite@cs.com
Message-ID: <20010531094656.07951.00002302@ng-ce1.news.cs.com>
Source record: 36448

What is "the best" disk editor, and why? If you have more than one favorite, list them all. Mine is Disk I/O by Robert Gray. The reason is that it is one of the few utilities that works on a MyDos hard drive partition. Most disk editors choke on a sector reference >720 or >1040. Quite a few choke on D/D. The Disk I/O file "Undelete" has saved my bacon several times (including this morning!)
Larry

I remember calling Atari's support line (which was actually great back in the Warner Bros. days) and crying about the loss of my program I had typed in from a magazine on that Atari 400 membrane keyboard. It was the "Version A" bug, the one that hit when one deleted a program line with exactly that number of characters to hit that boundary condition that locked it all up. Even though it took forever to save to tape, I saved often after that, and to this day I guess I'm one of the more nagging people in my office in regards to frequent backups. It's amazing what one can do with 16K of ram in that old Atari.

Yes. I've installed that one myself and that's really saying something from
someone like me who can cause a lot of damage quickly with a soldering iron.

Source record: 36453

My favorite was always Analog's Disk Tool by Tony Messina (where is he?). That was in the days of stock 810's with 720 single density 128 byte sectors; it was Basic and we modified it for Dos 2.5 enhanced except for the 'Undelete' routines.

I have not yet had a chance to try DiskMend on a hard drive, but it handles DD and was modified with new modules for disassembly and subdirectory support. It's major flaw was that the 'undelete' patched only the directory entry and never addressed the VTOC. I just learned to do them by hand; however it would be much more complicated with 64K sectors requiring about 40-45 VTOC sectors.

DiskRx was designed for Sparta structured data storage, but it did DD and maybe hard drives also... Rarely messed with it.

That's incredible! I've been looking for a complete list of releases. I finally got a downloaded copy of Hellfire Warrior and Datestones of Ryn to work on my TRS-80, I didn't know/think that it was released for the Atari. I'm kind of under the impression that not all titles were released for all computers. Some of the AH tapes I have are for Atari only. I'm gonna have to weed through and make a list of my own with computer release indicated as well- to sort out what I have in my bookshelf.
Thanks, this list is extremely helpful.

Disk Wizard II.
I don't think it does 'enhanced' 1050 density. It does do single
or double density, DOS 2 type disks.
Regardless of the DOS, it will map the bad sectors of a disk, useful
if you want to make a copy of a disk for patching with Chipmunk
or Black Patch. Some commercial disks have a lot of bad sectors
to keep you from making a backup of the good ones. DWII maps
those disks fairly fast, only getting 1 or 2 errors before it moves on
to the next sector. Then, you can make a backup of the good sectors
only, specify which sectors to copy.
It has convenient sector editing. It can recover deleted, unwritten
files, on a DOS 2 type disk. Finally it has a disassembler that you
can set the start address and offset in a sector, or it can disassemble
by file name. Good for following code, with a 'search' feature to
locate byte sequences.
I haven't used the others. I do have a sector editor for Sparta Disks,
but haven't used that one much either.

I remember downloading it with my trusty 1200 baud Prometheus
Pro-Modem. Took quite a long time... I think it was 128 sectors or
therebouts. I probably still have it on floppy somewhere.

The demo was pretty simple... It played back a 16K 4-bit sample using
POKEY's volume only feature. If you want more info on this, check the
Antic archives for an article called "Talk Is Cheap" (don't recall the
author) or "The Antic Sampling Processor" (by me). ASP supported
samples upto 48K and when used with a MIDI Mate interface, turned the
Atari into a monophonic sampler.

$60 for a SCSI Hard Drive interface that will work on my 800XL?

SIO or PBI?

I seem to remember that an EPROM had to be burned with the drive
specifications (Heads, cylinders, etc...)... am I imagining this?

What DOS's are supported? Maximum number of partitions? Support for more
than 8/9 active partitions?

Because I accidentally sold my old Adaptec 4000 with my old Volkswagen,
can anyone name some readily available SCSI drives that do 256byte
sectors? Could I use a 512byte sector drive and only use half the
capacity of the drive?

Thanks!

-Anthony

Another thing to keep in mind is that Microprose and Broderbund (sp?) both
were releasing titles early in the game so to speak. I have NATO commander
and Crusade over Europe and I might do scans for those as well as the
Microprose catalog. Electronic Arts as well. They kind of fell into Avalon
Hills genre of fantastic box work and somewhat lame games.
I have Pinball Construction Set and One on One- the sleeve for that one has
Wilt Chamberlin(sp?) and Larry Bird posing for an inner cover portrait.

Was it really that clever? I used to have a sampling cartridge produced by
2bit systems in the UK and made lots of audio samples both for use in
games and just because I could <grin>. Was such stuff not common
elsewhere? Was this demo exceptionally long or something?

>I'm currently finding for ram upgrades are from a Wizztronics board for the
>800XL from Best Electronics.

Tell me how the 1200XL's MMU works and I'll see if I can find a way how you can use my 1MB upgrade in a 1200XL. There are no PCB's for my upgrade yet. I'm still trying to chase some bugs out. But you can have a look at it at http://www.holyoak.com/atari/ click on 400/800/XL/XE or check out http://www.myatari.net clcik on the red picture, then click on 8-bit 1MB memory upgrade.

For the schematics try holyoak, for a photo try myatari.

Howdy folks

I'm trying to recreate Matthias Belitz's CD Audio Player (CDPL020.COM) in TurboBASIC and add a few features. At the moment, my software (which uses the ASPI Manager which is written by Matthias and is at the moment only available for the BlackBox) finds the CDROM Player and even knows how many tracks there are.

Am I only doing this for myself, or are there other people using a SCSI CD ROM player via their BlackBox on their 8 bit Atari's????

This is not the "Barbarian" that I was thinking of. This is a fighting game, and I also remember it from the ST. The Barbarian that I was thinking of was an action adventure where your character had to avoid traps -- sort of an outdoor Montezuma'z Revenge. (best comparison I can think of.) I never could get into fighting games, except to watch and listen with amazement at the demo mode of International Karate Championship.

Should it not be possible, Bill, to simply write a little different-than-usual PIA-driver to work with the Sega controllers? I say this totally off the top of my head without any regard to what signals the things actually use ... I suppose they could be using pins that aren't brought out to the Atari joystick connector, huh? :-b If that were the case, then it should still be possible to build a little "Y adapter" that would let you plug in one Sega controller to TWO Atari joystick slots, and thus pick up all the signals... maybe... Depends on the electrical consequences of grounding one port's pins to the other port's ground... but if they're all wired to the same chip internally it ought to work... right?

Chris,
If you know what the pinout of the controller is and what signals
are expected, then an interface for pretty much any I/o device could,
theoretically, be built and used with the Ataris.
Of course, with an external interface, some program interface
would also be required so that the computer would know how to talk with
the new/external hardware.

Source record: 36475

Ah yes... S.A.M.... I remember him well... :-) Actually I've got a copy of the disk pretty close at hand, and a photocopy of the actual manual "somewhere around here." The cool thing about the manual is that it documents the phonetic spelling (that "Bosnian-looking" stuff, as someone here put it), which lets you get much-more-natural-sounding speech in your programs... It also tells everything you could want to know about how to load-and-run S.A.M., all the addresses you can POKE to alter the pitch and speed of S.A.M.'s speech and to disable/enable screen-blanking during speech, and so forth.

I've also got the V: device handler somewhere, and a game called PokerS.A.M. which, as its name suggests, plays poker (5-card stud I believe) with speech added. Unfortunately it's buggy and occasionally "cheats" in that it gets the comparison wrong between two poker hands (its and yours)...

But I digress... I wrote ten or so small, simple, silly BASIC programs using S.A.M., 'way back when, to do such things as hold a pre-programmed telephone conversation with a friend, sing my computer-nickname in four-part harmony (one part at a time, mixed and overdubbed separately on a multi-channel tape deck), and -- my personal favorite -- a "talking terminal program" that would (among other things) "read me my e-mail" as I wandered around my apartment... Yes, folks, I had my Atari reading aloud my Ball State University VMS VAXcluster e-mail, back in 1986 or so... :-) Most if not all of this junk is still around on a disk somewhere around here; and somewhere I may still have a recording of a few lines of e-mail being read aloud... :-)

Ah, what memories. :-)

Chris

Speaking of endings, I recall "Spy's Demise" (by Penguin Software, though I long ago patched mine to change the bitmapped graphics to read "Eat Me Software," heheh) displayed lines of a "secret message" between levels, that could allegedly be decoded to produce the clue to some kind of grand prize, maybe a large amount of cash or something. Anybody ever hear about that, or know how it turned out if so? Who won it, what the prize really was, what the secret message really said, etc.?

Chris

I was not very satisfied with my trial; it deleted some files to match the vtoc
in lieu of the other way around...

I will have to see which version that was.

I've had for a while the Parrot audio sampler for my atari 800. It's like a single paddle controller used to adjust gain and it has a mini 1/8 jack to plug in a mike or a tape deck. There were probably many of these kinds of samplers made by different people.
Mo

The FAQ states that the MIO can use AC or DC, at least 6.2-7.2 volts,
it says. I'd use a standard 9v ac Atari brick. Actually, my 1 meg
came with a 9.3v DC supply and the 256k came with a 9v ac supply.
So probably a 9v ac or dc would be ok.

The same type of power supply used for a 810/1050 disk drive.

Atari part # CO17945.

Input 120V, 60Hz, 50W
Output 9VAC, 31VA.

You can also use this same power supply on a 8bit Nintendo Entertainment
System.

All,
I have, for a very long time, been a SpartaDOS fan. So... I pretty
much like DiskRX. It saved some pretty important stuff a few times. I
actually had to rebuild sector maps for some accidentally deleted files
and on one occasion, actually rebuilt the directory and sector maps on a
partially formatted disk. Talk about work. DiskRX is great and does work
on most, if not all Atari disk formats.

Chris,
Is it possible for you to scan and clean up the S.A.M manual. I
need a copy of it. I've been looking for one for ages. I lost mine a few
moves back. I'd really appreciate it. I just need an e-copy, no hard
stuff. Pretty much any format will work as well.

For Disk doctor I have to look when I find it I will put it for download somewhere...

DiskRX is good but for SpartaDOS users, but when talking about very good I think the TASKMASTER inside the Blackbox is great does everything including copy of 0 to 65535 sectors and supports 1Mb also SpartaDOS links, MyDOS 16 Mb partitions and DOS 2.x diskettes... works great with HDI, XF551 (Also 720Kb upgraded), Speedy, Happy and more...

I found this link on Slashdot.org about a new web browser for the commodre 64, someone needs to disassemble this and port it to the Atari8bit! Of course it brings about the old necessity of a unix dial up shell account, which are very scarce where I'm at.

Hello, all! I don't know much about Atari Emulators, I just want to get one to work for all the roms.

I am trying to use Xformer 2000 (for Windows) and have looked all over the net for instructions, but I can't find any. Does anyone know how to load a "cartridge" to the emulator? Are .atr files the correct ones to use?

Also, where is a good site to find game roms for the Atari 8-bit?

Patrick "SwohS Emag"

Honestly, though, I think the guiltiest party here was Hollywood. I can't count the number of times I saw a movie in the 1980's where a cart was referred to as a "tape." I think I remember hearing it in "Cloak & Dagger" and thinking what an idiot the director must have been for not knowing the difference. Oh well, how times have changed!

Analog didn't have a disk in the magazine until sometime around then. I remember when they offered the new disk subscription, and how pissed I was that my dad wouldn't front the money for it (I was about 16 then, and had no money of my own!). Anything you find prior to then would have been typed in by some of the dedicated masses, so there's probably not going to be a complete disk version from #1 - ~#40 anywhere in the world -- though I'd love to be proven wrong ;-)

That is a good summation of the Tramiels at Atari. On the one hand they did make missteps that eventually led to Atari's exit from the computer business. On the other, Atari would have died much sooner if left in the the hands of Time-Warner after the 1983 collapse of the original video game market, and without the arrival of the ST, for which Tramiel duly deserves credit for at least bringing to market. Unfortunately his "sell 'em low" approach, which had succeeded so well before with everything from adding machines to C64s, couldn't quite get low enough to beat the deals found with the new PC clones.

Atari800win plus is your best choice.

http://www.atari-area.net/emu.php

To load carts you just goto the file menu and choose ATTACH CARTRIDGE.

Almost all carts have the extender .rom although some have .crt or .bin

>Also, where is a good site to find game roms for the Atari 8-bit?

Roms or disks (atr's) ?

My sentiments, exactly. The other path was the one used by Texas
Instruments. If Time-Warner had done that, in all liklihood we wouldn't be
writing these notes, today. So I am personally grateful to Jack and his clan.

In most of sectors of business and technology, a dominant player or technology
always emerges. Niche players can exist, but typically, they are eventually
absorbed (or blotted out). For a fascinating (I think) look at this in the
area of technology, take a look at the book "Gorilla Game" (Picking Winners in
High Technology) by Moore, Johnson, and Kippola.

The upcoming battle between Sony, Microsoft, and Nintendo should be a classic,
and will likely take several years to play out.
(I'm betting on Sony, unless Microsoft gives away an X-Box with every Windows
upgrade! :-)) In a way, it feels very much like 1982, all over again...

Mirko,
That may be difficult. You need enough RAM to support it. If you
have a 1MB upgrade and SpartaDOS, You can configure it in 16KB banks up
to the max. OR a 1MB MI/O can be configured for up to 1MB RAMdisk. Other
than that, you're probably SOL.

> Another Question is: where can I get a RAM-Disk-Driver that gives me more
> then one logical drive?

Ramdrive will do that, it will let you divide your RAM up into around
8 or 9 (I think) logical drives of different sizes, configurations and
DOSes even. It should work with any XE compatible up to around 1MB.

You can set your logical drives up as SD/ED/DD, single or double
sided, or create custom sized logical drives with different sector
sizes (it will do sector sizes greater than 256 bytes if anyone is
developing a DOS to handle those). The logical drives can be write
protected/unprotected on the fly. Real and logical drives can also be
renumbered on the fly.

The drawback is that it uses the RAM under the OS, so it won't work
with most versions of SpartaDOS or anything else that uses that RAM
too. I've tested it with at least DOS 2.0/2.5/3.0 and MyDOS
4.50/4.53, and it should work with any DOS that doesn't use the RAM
under the OS.

URL is in the .sig

I wouldn't use a DC power supply. The MIO has a bridge rectifier circuit for converting AC to DC. It's designed to be used with an AC power source, 9 volts.

Also recommend taking the side covers off to allow more air flow. The MIO is notorious to generate a lot of heat and eventually the circuit board can get warped (especially if used to run a BBS 24hrs a day). The MIO is not an easy beast to repair when they break at times (memory refresh circuitry used inside of it is a beast to troubleshoot; even with schematics!).

I haven't really fooled around with Xformer much let alone the Windows
version. For emulators in general, all I had to do for ones that didn't
support hot swapping cartridges was to rename the binary files. i.e. to get
the old DOS Xformer to come up with the ASM/ED cart, all I had to do was
rename the ASM/ED ROM dump BASIC.ROM. Similar procedure worked with getting
some modified OMNIMON OS to run.

Derek is kind of on one extreme of the piracy debate. IMHO, don't look for
him to support ROM dumps because of that: It's his right.

I am happy with Tramiels for the same reason. They ended up lowering the prices and getting much better market penatration then Warner ever would have been able to accomplish. I must have 7-10 8bit computers laying around that I either picked up new from the stores in the 80s or through thrift shops in the early 90s. I even have 2 STs.

I don't think the "Atari should have spent more on advertizing" arguments would have worked for anything other then as a short term strategy.

My only real complaint and I have a tendancy to harp on it, is Atari should have moved into the clone market with their technology vs their name. Those Atari labeled PCs were pretty weak.

Atari should have taken the SIO and keyboard handling silicon off of the POKEY and made the first Adlib type sound card. Ditto for other things like updating ANTIC/GTIA such that they would have been a direct competitor to sellers like the Hercules card, but color and P/M Graphics in there too so they could hit both the business and gamer market.

They got so hung up on being a computer manufacturer that they forgot they were a technolgy company.

Source record: 36368

Dead 800, 810, 1050 etc AAtari power supplies are not always dead -
dead.
There is a thermal fuse in the power supply which blows if the supply
draws a little too much current and over heats. I have in my day
repaired over 100 of these "dead " supplies. Her is how it's done.
1. You must crack open the supply - I usually put it in a vise and
tighten up uintil the sides bulge a little, then give it a couple of
sharp rqaps with the back of a heavy screwdriver. Once you get a crack
started carefully pry it open. Remember you are going to want to tape
it back together again later.
2. One wire will go from AC supply (one of the prongs) under the wax
coated paper and out again then to the input side of the transformer.
There is a little theremal fuse where it goes in and out of the coil
under the paper - you can usually pull it out, its about the size of a
small resistor.
3. once you have located the fuse, you can either replace it with the
same size fuse (2Amp 110 Vac) about $2.50 for five at an electronic
supply house or cut it out and scrape 1/4 inch of the two wires and
twist together tightly and tape.
4. You should check everythig out with an ohm meter before powering it
up . In any event power it up unconnected and check output with DC
voltmeter.
5. tape everything up securely making sure nothing is going to be
pinched or shorted.
If you don't know anything about electric, I'de advise you to ask
someone who does to help.

Note if when you open the supply up everything is black and burnt it
will make a good weight for deepsea fishing.

A good point. I wonder how many different versions of Disk Tool there are floating around? I have at least 4 different versions in my archives. When I first got the Analog Compendium disks (with Disk Tool on them), I was struck by how long it took DT to initialize, so one of my first hacks was to write a ML loader, put the ML in an object file, and compile the Basic portion (with the DataSoft Compiler, I think). Gee, that brings back fond memories...

There were various hacker utils for doing this at the time.

Be warned tho, some stuff won't work 100% IF actually uses DOS (modem stuff
etc).

Games should be fine tho..

If "RAMDRIVE" uses the memory under the OS, it's useless for me, because it won't work with Turbo-BASIC. Is there a version out, that uses only the "normal" memory?

A problem with DOS executables is that they are often compound files. I've
wanted something similar for some time because the compiler I use on my
Atari (PL65) produces compound files. These are files which have sections
loaded into various parts of memory instead of being loaded in one
continuous block, which is what Multiboot needs.

Dunx, can you convert an ATR back to a real floppy, ie do you have an APE
lead?

If so then I am sure I have an ATR somewhere..

>The exact reasons why I like DiskTool and DiskMend: friendly interface and possible to add my own enhancements and features to the Basic code or ML routines.<

Somehow, my reply to this got cut off (at least on the Compuserve server). My reply was something close to the following:

A good point. I wonder how many different versions of Tony Messina's Disk Tool are around? I have at least 4 in my archives, and these are the ones that still are called Disk Tool. DT was one of my first, small hacks. When I got the Analog Compendium, I couldn't believe how long it took DT to initialize. So I wrote a short ml title screen with loader, made the ml portion of DT into an object file, and compiled the BASIC portion with the DataSoft compiler. Brings back fond memories...

I'm talking about single executable files here.

I think there was a way if yiou converted to Ian K High menu first then u
could convert back to multiboot,

not exactly sure nowdays as I used to do loads of this file transfer from
Ian K, Multiboot, Alpha etc , its some time since now though

:o)

>'C' is just a 12 byte patch of 'B' that fixes a few bugs and introduces

Sure you don't have that backwards? Version 'B' tried to fix the 'A' bug but
ended up making it worse. Version 'B' was short lived, it was the one that
was originally built into the XL series.

Considering what I think of the ST, I don't think that's a bad thing. 8-) I
always thought the 6 month (I thought it was 9 months) gestation period of
the ST really showed. (that is, poorly thought out). It was put together
quickly so it could beat the Amiga out the door.

> ...

The action adventure game "Barbarian" was made by Psygnosis. It was an
early game for the Atari ST and a lot better than many games made later. The
game really showed the difference between a 16 bit computer and the older
8 bit generation.

The figther game "Barbarian" was made by Palace Software and with good
graphics and excellent sound.

Anders

No, but there is a version of TB that doesn't use that RAM =)

I think it would be possible to modify Ramdrive to only use "normal"
memory without too much effort, and it might even be possible to almost do
that without any changes to the code, but unfortunately I don't really
have the time to look at it right now.

Yeah, I saw it and thought "hey, I suggested this for the Atari 8-bit
years ago!" :)

Use a 'proxy' server (ie, your Unix dialup account) to do the HTTP grabbing
and even do image conversion (NetPBM is your friend!)

I didn't have the skill to write modem-based s/w for the Atari though, so
all I could do was suggest it here on c.s.a.8. I don't think anyone ever
really worked on it. :^(

Compound files ARE single executable files, only the file format is a little
different.
